---

## Abstract

This specification defines the Document Object Model Events Level 3, a platform- and language-neutral interface that allows programs and scripts to dynamically access and update the content, structure and style of documents. The Document Object Model Events Level 3 builds on the Document Object Model Events Level 2.

## Status of this document

This document is a preliminary version of the Level 3 API.

It is a W3C Working Draft for review by W3C members and other interested parties and acts as a starting point for the future DOM Working Group, should it be approved or not by the W3C Members. It is a draft document and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use W3C Working Drafts as reference material or to cite them as other than "work in progress".

Comments on this document are invited and are to be sent to the public mailing list [www-dom@w3.org](mailto:www-dom@w3.org). An archive is available at <http://lists.w3.org/Archives/Public/www-dom/>.

This document has been produced as part of the W3C DOM Activity. The authors of this document are the DOM WG members. Different modules of the Document Object Model have different editors.

A list of current W3C Recommendations and other technical documents can be found at <http://www.w3.org/TR>.

## Copyright Notice

**Copyright © 2000 World Wide Web Consortium, (Massachusetts Institute of Technology, Institut National de Recherche en Informatique et en Automatique, Keio University). All Rights Reserved.**

This document is published under the W3C Document Copyright Notice and License [p.5] . The bindings within this document are published under the W3C Software Copyright Notice and License [p.6] . The software license requires "Notice of any changes or modifications to the W3C files, including the date changes were made." Consequently, modified versions of the DOM bindings must document that they do not conform to the W3C standard; in the case of the IDL binding, the pragma prefix can no longer be 'w3c.org'; in the case of the Java binding, the package names can no longer be in the 'org.w3c' package.

# 1. Document Object Model Events

*Editors*

Tom Pixley, Netscape Communications Corporation

## 1.1. Level 3 Events Overview

The goal of the DOM Level 3 Events specification is to expand upon the functionality specified in the DOM Level 2 Event Specification. The specification does this by adding new interfaces which are complimentary to the interfaces defined in the DOM Level 2 Event Specification as well as adding new event sets to those already defined.

This specification requires the previously designed interfaces in order to be functional. It is not designed to be standalone. These interfaces are not designed to supercede the interfaces already provided but instead to add to the functionality contained within them.

## 1.2. Level 3 Events Interfaces

### 1.2.1. Key events

A DOM consumer can use the `hasFeature` of the `DOMImplementation` interface to determine whether the Key event set has been implemented by a DOM implementation. The feature string for this event set is "KeyEvents". This string is also used with the `createEvent` method.

**Interface *KeyEvent*** (introduced in **DOM Level 3**)

The `KeyEvent` interface provides specific contextual information associated with Key Events.

The `detail` attribute inherited from `UIEvent` is used to indicate the number of keypresses which have occurred during key repetition. If this information is not available this value should be 0.

#### **IDL Definition**

```
// Introduced in DOM Level 3:
interface KeyEvent : UIEvent {

    // VirtualKeyCode
    const unsigned long    DOM_VK_UNDEFINED           = 0x0;
    const unsigned long    DOM_VK_RIGHT_ALT          = 0x12;
    const unsigned long    DOM_VK_LEFT_ALT           = 0x12;
    const unsigned long    DOM_VK_LEFT_CONTROL       = 0x11;
    const unsigned long    DOM_VK_RIGHT_CONTROL      = 0x11;
    const unsigned long    DOM_VK_LEFT_SHIFT         = 0x10;
    const unsigned long    DOM_VK_RIGHT_SHIFT        = 0x10;
    const unsigned long    DOM_VK_META              = 0x9D;
    const unsigned long    DOM_VK_BACK_SPACE         = 0x08;
    const unsigned long    DOM_VK_CAPS_LOCK          = 0x14;
    const unsigned long    DOM_VK_DELETE            = 0x7F;
    const unsigned long    DOM_VK_END                = 0x23;
    const unsigned long    DOM_VK_ENTER              = 0x0D;
```

### 1.2.1. Key events

```
const unsigned long    DOM_VK_ESCAPE           = 0x1B;
const unsigned long    DOM_VK_HOME             = 0x24;
const unsigned long    DOM_VK_NUM_LOCK        = 0x90;
const unsigned long    DOM_VK_PAUSE           = 0x13;
const unsigned long    DOM_VK_PRINTSCREEN      = 0x9A;
const unsigned long    DOM_VK_SCROLL_LOCK     = 0x91;
const unsigned long    DOM_VK_SPACE           = 0x20;
const unsigned long    DOM_VK_TAB              = 0x09;
const unsigned long    DOM_VK_LEFT            = 0x25;
const unsigned long    DOM_VK_RIGHT           = 0x27;
const unsigned long    DOM_VK_UP              = 0x26;
const unsigned long    DOM_VK_DOWN            = 0x28;
const unsigned long    DOM_VK_PAGE_DOWN       = 0x22;
const unsigned long    DOM_VK_PAGE_UP         = 0x21;
const unsigned long    DOM_VK_F1              = 0x70;
const unsigned long    DOM_VK_F2              = 0x71;
const unsigned long    DOM_VK_F3              = 0x72;
const unsigned long    DOM_VK_F4              = 0x73;
const unsigned long    DOM_VK_F5              = 0x74;
const unsigned long    DOM_VK_F6              = 0x75;
const unsigned long    DOM_VK_F7              = 0x76;
const unsigned long    DOM_VK_F8              = 0x77;
const unsigned long    DOM_VK_F9              = 0x78;
const unsigned long    DOM_VK_F10             = 0x79;
const unsigned long    DOM_VK_F11             = 0x7A;
const unsigned long    DOM_VK_F12             = 0x7B;
const unsigned long    DOM_VK_F13             = 0xF000;
const unsigned long    DOM_VK_F14             = 0xF001;
const unsigned long    DOM_VK_F15             = 0xF002;
const unsigned long    DOM_VK_F16             = 0xF003;
const unsigned long    DOM_VK_F17             = 0xF004;
const unsigned long    DOM_VK_F18             = 0xF005;
const unsigned long    DOM_VK_F19             = 0xF006;
const unsigned long    DOM_VK_F20             = 0xF007;
const unsigned long    DOM_VK_F21             = 0xF008;
const unsigned long    DOM_VK_F22             = 0xF009;
const unsigned long    DOM_VK_F23             = 0xF00A;
const unsigned long    DOM_VK_F24             = 0xF00B;

        attribute DOMString    outputString;
        attribute unsigned long keyVal;
        attribute unsigned long virtKeyVal;
        attribute boolean      inputGenerated;
        attribute boolean      numPad;
boolean    GetModifier(in unsigned long modifier);
void       initKeyEvent(in DOMString typeArg,
                        in boolean canBubbleArg,
                        in boolean cancelableArg,
                        in views::AbstractView viewArg,
                        in unsigned short detailArg,
                        in DOMString outputStringArg,
                        in unsigned long keyValArg,
                        in unsigned long virtKeyValArg,
                        in boolean inputGeneratedArg,
                        in boolean numPadArg);
};
```

**Definition group *VirtualKeyCode***

An integer indicating which key was pressed.

**Defined Constants**

DOM\_VK\_BACK\_SPACE

DOM\_VK\_CAPS\_LOCK

DOM\_VK\_DELETE

DOM\_VK\_DOWN

DOM\_VK\_END

DOM\_VK\_ENTER

DOM\_VK\_ESCAPE

DOM\_VK\_F1

Constant for the F1 function key.

DOM\_VK\_F10

Constant for the F10 function key.

DOM\_VK\_F11

Constant for the F11 function key.

DOM\_VK\_F12

Constant for the F12 function key.

DOM\_VK\_F13

Constant for the F13 function key.

DOM\_VK\_F14

Constant for the F14 function key.

DOM\_VK\_F15

Constant for the F15 function key.

DOM\_VK\_F16

Constant for the F16 function key.

DOM\_VK\_F17

Constant for the F17 function key.

DOM\_VK\_F18

Constant for the F18 function key.

DOM\_VK\_F19  
Constant for the F19 function key.

DOM\_VK\_F2  
Constant for the F2 function key.

DOM\_VK\_F20  
Constant for the F20 function key.

DOM\_VK\_F21  
Constant for the F21 function key.

DOM\_VK\_F22  
Constant for the F22 function key.

DOM\_VK\_F23  
Constant for the F23 function key.

DOM\_VK\_F24  
Constant for the F24 function key.

DOM\_VK\_F3  
Constant for the F3 function key.

DOM\_VK\_F4  
Constant for the F4 function key.

DOM\_VK\_F5  
Constant for the F5 function key.

DOM\_VK\_F6  
Constant for the F6 function key.

DOM\_VK\_F7  
Constant for the F7 function key.

DOM\_VK\_F8  
Constant for the F8 function key.

DOM\_VK\_F9  
Constant for the F9 function key.

DOM\_VK\_HOME

DOM\_VK\_LEFT

DOM\_VK\_LEFT\_ALT  
This key is modifier key

DOM\_VK\_LEFT\_CONTROL  
This key is modifier key

DOM\_VK\_LEFT\_SHIFT  
This key is modifier key

DOM\_VK\_META  
This key is modifier key

DOM\_VK\_NUM\_LOCK

DOM\_VK\_PAGE\_DOWN

DOM\_VK\_PAGE\_UP

DOM\_VK\_PAUSE

DOM\_VK\_PRINTSCREEN

DOM\_VK\_RIGHT

DOM\_VK\_RIGHT\_ALT  
This key is modifier key

DOM\_VK\_RIGHT\_CONTROL  
This key is modifier key

DOM\_VK\_RIGHT\_SHIFT  
This key is modifier key

DOM\_VK\_SCROLL\_LOCK

DOM\_VK\_SPACE

DOM\_VK\_TAB

DOM\_VK\_UNDEFINED  
Used for key events which do not have a virtual key code available.

DOM\_VK\_UP

### Attributes

`inputGenerated` of type boolean

The `inputGenerated` attribute indicates whether the key event will normally cause visible output. If the key event does not generate any visible output, such as the use of a function key or the combination of certain modifier keys used in conjunction with another key, then the value will be false. If visible output is normally generated by the key event then the value will be true.

The value of `inputGenerated` does not guarantee the creation of a character. If a key

event causing visible output is cancelable it may be prevented from causing output. This attribute is intended primarily to differentiate between keys events which may or may not produce visible output depending on the system state.

`keyVal` of type `unsigned long`

The value of `keyVal` holds the value of the Unicode character associated with the depressed key. If the key has no Unicode representation or no Unicode character is available the value is 0..

`numPad` of type `boolean`

The `numPad` attribute indicates whether or not the key event was generated on the number pad section of the keyboard. If the number pad was used to generate the key event the value is true, otherwise the value is false.

`outputString` of type `DOMString`

`outputString` holds the value of the output generated by the key event. This may be a single Unicode character or it may be a string. It may also be null in the case where no output was generated by the key event.

`virtKeyVal` of type `unsigned long`

When the key associated with a key event is not representable via a Unicode character `virtKeyVal` holds the virtual key code associated with the depressed key. If the key has a Unicode representation or no virtual code is available the value is `DOM_VK_UNDEFINED`.

## Methods

`GetModifier`

The `GetModifier` method is used to check the status of a single modifier key associated with a `KeyEvent`. The identifier of the modifier in question is passed into the `GetModifier` function. If the modifier is triggered it will return true. If not, it will return false.

The list of keys below represents the allowable modifier parameters for this method.

- `DOM_VK_LEFT_ALT`
- `DOM_VK_RIGHT_ALT`
- `DOM_VK_LEFT_CONTROL`
- `DOM_VK_RIGHT_CONTROL`
- `DOM_VK_LEFT_SHIFT`
- `DOM_VK_RIGHT_SHIFT`
- `DOM_VK_META`

### Parameters

`modifier` of type `unsigned long`

The modifier which the user wishes to query

### Return Value

`boolean`

**No Exceptions**`initKeyEvent`

Issue modifier:

why no modifiers parameter to the `initKeyEvent`?**Parameters**`typeArg` of type `DOMString`

Specifies the event type.

`canBubbleArg` of type `boolean`

Specifies whether or not the event can bubble.

`cancelableArg` of type `boolean`

Specifies whether or not the event's default action can be prevent.

`viewArg` of type `views::AbstractView`Specifies the `KeyEvent`'s `AbstractView`.`detailArg` of type `unsigned short`

Specifies the number of repeated keypresses, if available.

`outputStringArg` of type `DOMString`Specifies the `KeyEvent`'s `outputString` attribute`keyValArg` of type `unsigned long`Specifies the `KeyEvent`'s `keyVal` attribute`virtKeyValArg` of type `unsigned long`Specifies the `KeyEvent`'s `virtKeyVal` attribute`inputGeneratedArg` of type `boolean`Specifies the `KeyEvent`'s `inputGenerated` attribute`numPadArg` of type `boolean`Specifies the `KeyEvent`'s `numPad` attribute**No Return Value****No Exceptions**

The different types of Key events that can occur are:

**keypress**

The `keypress` event occurs when a key is pressed. If the key remains depressed, multiple keypresses may be generated. This event maps not to the physical depression of the key but is instead the result of that action, often being the insertion of a character.

- Bubbles: Yes
- Cancelable: Yes

**keydown**

The keydown event occurs when a key is pressed down.

- Bubbles: Yes
- Cancelable: Yes

**keyup**

The keyup event occurs when a key is released.

- Bubbles: Yes
- Cancelable: Yes

## 1.2.2. EventListener Grouping

EventListener grouping is intended to allow groups of `EventListeners` to be registered which will each have independent event flow within them which is not affected by changes to event flow in any other group. This may be used to control events separately in multiple views on a document. It may also be used to develop an application which uses events without the problem of possible interference by other applications running within the same document.

The new interfaces added for EventListener grouping should now interfere with the interfaces established in the Level 2 DOM.

### Interface *EventGroup*

The `EventGroup` interface is simply a placeholder for separating the event flows when there are multiple groups of listeners for a DOM tree.

Event listeners can be registered without an `EventGroup` using the existing `EventTarget` interface, or with an associated `EventGroup` using the new `EventTargetGroup` [p.16] interface. When an event is dispatched, it is dispatched independently to each `EventGroup`. In particular, the `stopPropagation` method of the `Event` interface only stops propagation for event listeners without an associated `EventGroup`. Correspondingly, the `stopPropagation` method of `EventGrouped` [p.17] only stops propagation for event listeners within the specified `EventGroup`.

#### IDL Definition

```
interface EventGroup {
};
```

### Interface *EventTargetGroup*

The `EventTargetGroup` interface is implemented by the same set of objects that implement the `EventTarget` interface, namely all `EventTargets` in in implementation which supports the Event model and the `EventGroup` extension.

#### IDL Definition

```

interface EventTargetGroup {
    void                addEventListener(in DOMString type,
                                        in EventListener listener,
                                        in boolean useCapture,
                                        in EventGroup eventGroup);

    void                removeEventListener(in DOMString type,
                                        in EventListener listener,
                                        in boolean useCapture,
                                        in EventGroup eventGroup);
};

```

**Methods****addEventListener**

This method is equivalent to the `addEventListener` method of the `EventTarget` interface, with the exception of the added `eventGroup` parameter. The listener is registered with this `EventGroup` [p.16] associated.

**Parameters**

type of type `DOMString`

listener of type `EventListener`

useCapture of type `boolean`

eventGroup of type `EventGroup` [p.16]

The `EventGroup` to associate with the listener.

**No Return Value****No Exceptions****removeEventListener**

This method is equivalent to the `removeEventListener` method of the `EventTarget` interface, with the exception of the added `eventGroup` parameter. The listener registered with this `EventGroup` [p.16] associated is removed.

**Parameters**

type of type `DOMString`

listener of type `EventListener`

useCapture of type `boolean`

eventGroup of type `EventGroup` [p.16]

The `EventGroup` to associate with the listener.

**No Return Value****No Exceptions****Interface *EventGrouped***

The EventGrouped interface is implemented by all Event objects.

### IDL Definition

```
interface EventGrouped {
    void stopPropagation(in EventGroup eventGroup);
};
```

### Methods

#### stopPropagation

The stopPropagation method is used prevent further propagation of an event during event flow within an EventGroup [p.16] . If this method is called by any EventListener the event will cease propagating through the tree within the specified EventGroup. The event will complete dispatch to all listeners on the current EventTarget before event flow stops. This method may be used during any stage of event flow. Event propagation for other EventGroups, or listeners not associated with any EventGroup, is not affected.

#### Parameters

eventGroup of type EventGroup [p.16]

The EventGroup in which to stop event propagation.

#### No Return Value

#### No Exceptions

### Interface DocumentEventGroup

The DocumentEventGroup interface provides a mechanism by which the user can create an EventGroup [p.16] of a type supported by the implementation. It is expected that the DocumentEvent interface will be implemented on the same object which implements the Documentinterface in an implementation which supports the EventGroupextension.

### IDL Definition

```
interface DocumentEventGroup {
    EventGroup createEventGroup();
};
```

### Methods

#### createEventGroup

This method creates a new EventGroup for use in the addEventListener and removeEventListener methods of the EventTargetGroup interface.

#### Return Value

EventGroup [p.16]      The newly created EventGroup.

#### No Parameters

#### No Exceptions

## 1.3. Issues

Issue getModifier:

Why is modifier state exposed through a method rather than an attribute?

Issue ISO-IEC-9995:

Upon what do you base the set of virtual keycodes as well as their values? Have you coordinated this set with that defined by ISO/IEC 9995 which addresses various Keyboard symbol issues.

Issue ISO-IEC-14755:

Review ISO/IEC 14755 "Input methods to enter characters from the repertoire of ISO/IEC 10646 with a keyboard or other input device" to insure that the treatment of input state is consistent with that expected by current practice when it comes to platforms which support input methods.

Issue offsets:

(This issue is related with mouse events and Views?)

it would be useful if MouseEvent class had a property that would enable listners to learn about coordinates of the event within the element's own coordinate system.

### 1.3. Issues

## Appendix A: IDL Definitions

This appendix contains the complete OMG IDL [OMGIDL] for the Level 3 Document Object Model Events definitions.

The IDL files are also available as:

<http://www.w3.org/TR/2000/WD-DOM-Level-3-Events-20000901/idl.zip>

### events.idl:

```
// File: events.idl

#ifndef _EVENTS_IDL_
#define _EVENTS_IDL_

#include "dom.idl"
#include "views.idl"

#pragma prefix "dom.w3c.org"
module events
{

    typedef dom::DOMString DOMString;
    typedef dom::EventListener EventListener;
    typedef dom::UIEvent UIEvent;

    interface EventGroup {
    };

    interface EventTargetGroup {
        void          addEventListener(in DOMString type,
                                       in EventListener listener,
                                       in boolean useCapture,
                                       in EventGroup eventGroup);
        void          removeEventListener(in DOMString type,
                                         in EventListener listener,
                                         in boolean useCapture,
                                         in EventGroup eventGroup);
    };

    interface EventGrouped {
        void          stopPropagation(in EventGroup eventGroup);
    };

    interface DocumentEventGroup {
        EventGroup    createEventGroup();
    };

    // Introduced in DOM Level 3:
    interface KeyEvent : UIEvent {

        // VirtualKeyCode

## Appendix C: ECMA Script Language Binding

This appendix contains the complete ECMA Script [ECMAScript] binding for the Level 3 Document Object Model Events definitions.

### Class **KeyEvent**

The **KeyEvent** class has the following constants:

**KeyEvent.DOM\_VK\_UNDEFINED**

This constant is of type **int** and its value is **0x0**.

**KeyEvent.DOM\_VK\_RIGHT\_ALT**

This constant is of type **int** and its value is **0x12**.

**KeyEvent.DOM\_VK\_LEFT\_ALT**

This constant is of type **int** and its value is **0x12**.

**KeyEvent.DOM\_VK\_LEFT\_CONTROL**

This constant is of type **int** and its value is **0x11**.

**KeyEvent.DOM\_VK\_RIGHT\_CONTROL**

This constant is of type **int** and its value is **0x11**.

**KeyEvent.DOM\_VK\_LEFT\_SHIFT**

This constant is of type **int** and its value is **0x10**.

**KeyEvent.DOM\_VK\_RIGHT\_SHIFT**

This constant is of type **int** and its value is **0x10**.

**KeyEvent.DOM\_VK\_META**

This constant is of type **int** and its value is **0x9D**.

**KeyEvent.DOM\_VK\_BACK\_SPACE**

This constant is of type **int** and its value is **0x08**.

**KeyEvent.DOM\_VK\_CAPS\_LOCK**

This constant is of type **int** and its value is **0x14**.

**KeyEvent.DOM\_VK\_DELETE**

This constant is of type **int** and its value is **0x7F**.

**KeyEvent.DOM\_VK\_END**

This constant is of type **int** and its value is **0x23**.

**KeyEvent.DOM\_VK\_ENTER**

This constant is of type **int** and its value is **0x0D**.

**KeyEvent.DOM\_VK\_ESCAPE**

This constant is of type **int** and its value is **0x1B**.

**KeyEvent.DOM\_VK\_HOME**

This constant is of type **int** and its value is **0x24**.

**KeyEvent.DOM\_VK\_NUM\_LOCK**

This constant is of type **int** and its value is **0x90**.

**KeyEvent.DOM\_VK\_PAUSE**

This constant is of type **int** and its value is **0x13**.

**KeyEvent.DOM\_VK\_PRINTSCREEN**

This constant is of type **int** and its value is **0x9A**.

**KeyEvent.DOM\_VK\_SCROLL\_LOCK**

This constant is of type **int** and its value is **0x91**.

**KeyEvent.DOM\_VK\_SPACE**

This constant is of type **int** and its value is **0x20**.

**KeyEvent.DOM\_VK\_TAB**

This constant is of type **int** and its value is **0x09**.

**KeyEvent.DOM\_VK\_LEFT**

This constant is of type **int** and its value is **0x25**.

**KeyEvent.DOM\_VK\_RIGHT**

This constant is of type **int** and its value is **0x27**.

**KeyEvent.DOM\_VK\_UP**

This constant is of type **int** and its value is **0x26**.

**KeyEvent.DOM\_VK\_DOWN**

This constant is of type **int** and its value is **0x28**.

**KeyEvent.DOM\_VK\_PAGE\_DOWN**

This constant is of type **int** and its value is **0x22**.

**KeyEvent.DOM\_VK\_PAGE\_UP**

This constant is of type **int** and its value is **0x21**.

**KeyEvent.DOM\_VK\_F1**

This constant is of type **int** and its value is **0x70**.

**KeyEvent.DOM\_VK\_F2**

This constant is of type **int** and its value is **0x71**.

**KeyEvent.DOM\_VK\_F3**

This constant is of type **int** and its value is **0x72**.

**KeyEvent.DOM\_VK\_F4**

This constant is of type **int** and its value is **0x73**.

**KeyEvent.DOM\_VK\_F5**

This constant is of type **int** and its value is **0x74**.

**KeyEvent.DOM\_VK\_F6**

This constant is of type **int** and its value is **0x75**.

**KeyEvent.DOM\_VK\_F7**

This constant is of type **int** and its value is **0x76**.

**KeyEvent.DOM\_VK\_F8**

This constant is of type **int** and its value is **0x77**.

**KeyEvent.DOM\_VK\_F9**

This constant is of type **int** and its value is **0x78**.

**KeyEvent.DOM\_VK\_F10**

This constant is of type **int** and its value is **0x79**.

**KeyEvent.DOM\_VK\_F11**

This constant is of type **int** and its value is **0x7A**.

**KeyEvent.DOM\_VK\_F12**

This constant is of type **int** and its value is **0x7B**.

**KeyEvent.DOM\_VK\_F13**

This constant is of type **int** and its value is **0xF000**.

**KeyEvent.DOM\_VK\_F14**

This constant is of type **int** and its value is **0xF001**.

**KeyEvent.DOM\_VK\_F15**

This constant is of type **int** and its value is **0xF002**.

**KeyEvent.DOM\_VK\_F16**

This constant is of type **int** and its value is **0xF003**.

**KeyEvent.DOM\_VK\_F17**

This constant is of type **int** and its value is **0xF004**.

**KeyEvent.DOM\_VK\_F18**

This constant is of type **int** and its value is **0xF005**.

**KeyEvent.DOM\_VK\_F19**

This constant is of type **int** and its value is **0xF006**.

**KeyEvent.DOM\_VK\_F20**

This constant is of type **int** and its value is **0xF007**.

**KeyEvent.DOM\_VK\_F21**

This constant is of type **int** and its value is **0xF008**.

**KeyEvent.DOM\_VK\_F22**

This constant is of type **int** and its value is **0xF009**.

**KeyEvent.DOM\_VK\_F23**

This constant is of type **int** and its value is **0xF00A**.

**KeyEvent.DOM\_VK\_F24**

This constant is of type **int** and its value is **0xF00B**.

Object **KeyEvent**

**KeyEvent** has all the properties and methods of **UIEvent** as well as the properties and methods defined below.

The **KeyEvent** object has the following properties:

**outputString**

This property is of type **String**.

**keyVal**

This property is of type **int**.

**virtKeyVal**

This property is of type **int**.

**inputGenerated**

This property is of type **boolean**.

**numPad**

This property is of type **boolean**.

The **KeyEvent** object has the following methods:

**GetModifier(modifer)**

This method returns a **boolean**.

The **modifer** parameter is of type **int**.

**initKeyEvent(typeArg, canBubbleArg, cancelableArg, viewArg, detailArg, outputStringArg, keyValArg, virtKeyValArg, inputGeneratedArg, numPadArg)**

This method has no return value.

The **typeArg** parameter is of type **String**.

The **canBubbleArg** parameter is of type **boolean**.

The **cancelableArg** parameter is of type **boolean**.

The **viewArg** parameter is of type **AbstractView**.

The **detailArg** parameter is of type **short**.

The **outputStringArg** parameter is of type **String**.

The **keyValArg** parameter is of type **int**.

The **virtKeyValArg** parameter is of type **int**.

The **inputGeneratedArg** parameter is of type **boolean**.

The **numPadArg** parameter is of type **boolean**.

Object **EventGroup**

Object **EventTargetGroup**

The **EventTargetGroup** object has the following methods:

**addEventListener(type, listener, useCapture, eventGroup)**

This method has no return value.

The **type** parameter is of type **String**.

The **listener** parameter is of type **EventListener**.

The **useCapture** parameter is of type **boolean**.

The **eventGroup** parameter is of type **EventGroup**.

**removeEventListener(type, listener, useCapture, eventGroup)**

This method has no return value.

The **type** parameter is of type **String**.

The **listener** parameter is of type **EventListener**.

The **useCapture** parameter is of type **boolean**.

The **eventGroup** parameter is of type **EventGroup**.

Object **EventGrouped**

The **EventGrouped** object has the following methods:

**stopPropagation(eventGroup)**

This method has no return value.

The **eventGroup** parameter is of type **EventGroup**.

Object **DocumentEventGroup**

The **DocumentEventGroup** object has the following methods:

**createEventGroup()**

This method returns a **EventGroup**.
