

PgMarket 1.4.x relational database schema

MODULARITY

- In application.inc.php it is chosen which optional tables are used and which optional fields are used (and, if necessary, which of them are mandatory).
- The scripts and the templates are able to handle the corresponding settings.
- The validation function for an optional field must be capable of handling the corresponding use setting, if needed.

PgMarket 1.5.3 relational database schema
