1 Todo List

Member `__gnu_cxx::distance` (`_InputIterator __first`, `_InputIterator __last`, `_Distance &__n`)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html

Class `__gnu_cxx::hash_map<_Key, _Tp, _HashFn, _EqualKey, _Alloc>`

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html

Class `__gnu_cxx::hash_multimap<_Key, _Tp, _HashFn, _EqualKey, _Alloc>`

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html

Class `__gnu_cxx::hash_multiset<_Value, _HashFcn, _EqualKey, _Alloc>`

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html

Class `__gnu_cxx::hash_set<_Value, _HashFcn, _EqualKey, _Alloc>`

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html

Member `__gnu_cxx::power` (`_Tp __x`, `_Integer __n`, `_MonoidOperation __monoid_op`)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html

Member `__gnu_cxx::power` (`_Tp __x`, `_Integer __n`)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html

Member `__gnu_cxx::random_sample` (`_InputIterator __first`, `_InputIterator __last`, `_RandomAccessIterator __out_first`, `_RandomAccessIterator __out_last`)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html

- Member `__gnu_cxx::random_sample`** (`_InputIterator __first, _InputIterator __last, _RandomAccessIterator __out_first, _RandomAccessIterator __out_last, _RandomNumberGenerator &__rand`)
Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>
- Member `__gnu_cxx::random_sample_n`** (`_ForwardIterator __first, _ForwardIterator __last, _OutputIterator __out, const _Distance __n, _RandomNumberGenerator &__rand`)
Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>
- Member `__gnu_cxx::random_sample_n`** (`_ForwardIterator __first, _ForwardIterator __last, _OutputIterator __out, const _Distance __n`)
Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>
- Class `__gnu_cxx::rb_tree<_Key, _Value, _KeyOfValue, _Compare, _Alloc>`**
Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>
- Class `__gnu_cxx::rope<_CharT, _Alloc>`**
Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>
- Class `__gnu_cxx::slist<_Tp, _Alloc>`**
Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>
- Member `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::operator->()`** `const noexcept`
Make this correct w.r.t. iterators that return proxies
- Member `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator->()`** `const`
Make this correct w.r.t. iterators that return proxies
- Class `std::basic_string<_CharT, _Traits, _Alloc>`**
Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>
- Member `std::regex_traits<_Ch_type>::transform_primary`** (`_Fwd_iter __first, _Fwd_iter __last`) `const`
Implement this function correctly.

2 Module Documentation

2.1 Adaptors for pointers to functions

Collaboration diagram for Adaptors for pointers to functions:

Classes

- class `std::pointer_to_binary_function<_Arg1, _Arg2, _Result>`
- class `std::pointer_to_unary_function<_Arg, _Result>`

Functions

- `template<typename _Arg, typename _Result>`
`pointer_to_unary_function`
`<_Arg, _Result> std::ptr_fun (_Result(*)(__x)(_Arg))`
- `template<typename _Arg1, typename _Arg2, typename _Result>`
`pointer_to_binary_function`
`<_Arg1, _Arg2, _Result> std::ptr_fun (_Result(*)(__x)(_Arg1, _Arg2))`

2.1.1 Detailed Description

The advantage of function objects over pointers to functions is that the objects in the standard library declare nested typedefs describing their argument and result types with uniform names (e.g., `result_type` from the base classes `unary_function` and `binary_function`). Sometimes those typedefs are required, not just optional.

Adaptors are provided to turn pointers to unary (single-argument) and binary (double-argument) functions into function objects. The long-winded functor `pointer_to_unary_function` is constructed with a function pointer `f`, and its `operator()` called with argument `x` returns `f(x)`. The functor `pointer_to_binary_function` does the same thing, but with a double-argument `f` and `operator()`.

The function `ptr_fun` takes a pointer-to-function `f` and constructs an instance of the appropriate functor.

2.1.2 Function Documentation

2.1.2.1 `template<typename _Arg, typename _Result> pointer_to_unary_function<_Arg, _Result> std::ptr_fun (_Result(*)(_Arg) __x) [inline]`

One of the [adaptors for function pointers](#).

Definition at line 791 of file `stl_function.h`.

2.1.2.2 `template<typename _Arg1, typename _Arg2, typename _Result> pointer_to_binary_function<_Arg1, _Arg2, _Result> std::ptr_fun (_Result(*)(_Arg1, _Arg2) __x) [inline]`

One of the [adaptors for function pointers](#).

Definition at line 817 of file `stl_function.h`.

2.2 Adaptors for pointers to members

Collaboration diagram for Adaptors for pointers to members:

Classes

- class `std::const_mem_fun1_ref_t<_Ret, _Tp, _Arg>`
- class `std::const_mem_fun1_t<_Ret, _Tp, _Arg>`
- class `std::const_mem_fun_ref_t<_Ret, _Tp>`
- class `std::const_mem_fun_t<_Ret, _Tp>`
- class `std::mem_fun1_ref_t<_Ret, _Tp, _Arg>`
- class `std::mem_fun1_t<_Ret, _Tp, _Arg>`
- class `std::mem_fun_ref_t<_Ret, _Tp>`
- class `std::mem_fun_t<_Ret, _Tp>`

Functions

- `template<typename _Ret, typename _Tp>`
`mem_fun_t<_Ret, _Tp> std::mem_fun (_Ret(_Tp::*__f)())`
- `template<typename _Ret, typename _Tp, typename _Arg>`
`mem_fun1_t<_Ret, _Tp, _Arg> std::mem_fun (_Ret(_Tp::*__f)(_Arg))`
- `template<typename _Ret, typename _Tp>`
`mem_fun_ref_t<_Ret, _Tp> std::mem_fun_ref (_Ret(_Tp::*__f)())`
- `template<typename _Ret, typename _Tp, typename _Arg>`
`mem_fun1_ref_t<_Ret, _Tp, _Arg> std::mem_fun_ref (_Ret(_Tp::*__f)(_Arg))`

2.2.1 Detailed Description

There are a total of $8 = 2^3$ function objects in this family. (1) Member functions taking no arguments vs member functions taking one argument. (2) Call through pointer vs call through reference. (3) Const vs non-const member function.

All of this complexity is in the function objects themselves. You can ignore it by using the helper function `mem_fun` and `mem_fun_ref`, which create whichever type of adaptor is appropriate.

2.3 Algorithms

Collaboration diagram for Algorithms:

Modules

- [Mutating](#)
- [Non-Mutating](#)
- [Sorting](#)

2.3.1 Detailed Description

Components for performing algorithmic operations. Includes non-modifying sequence, modifying (mutating) sequence, sorting, searching, merge, partition, heap, set, minima, maxima, and permutation operations.

2.4 Allocators

Collaboration diagram for Allocators:

Classes

- struct `__gnu_cxx::__alloc_traits<_Alloc>`
- class `__gnu_cxx::__mt_alloc<_Tp, _Poolp>`
- class `__gnu_cxx::__pool_alloc<_Tp>`
- class `__gnu_cxx::__ExtPtr_allocator<_Tp>`
- class `__gnu_cxx::array_allocator<typename, typename>`
- class `__gnu_cxx::bitmap_allocator<typename>`
- class `__gnu_cxx::debug_allocator<_Alloc>`
- class `__gnu_cxx::malloc_allocator<typename>`
- class `__gnu_cxx::new_allocator<typename>`
- class `__gnu_cxx::throw_allocator_base<_Tp, _Cond>`
- class `std::allocator<_Tp>`
- class `std::allocator<void>`
- struct `std::allocator_traits<_Alloc>`
- class `std::scoped_allocator_adaptor<_OuterAlloc, _InnerAllocs>`
- struct `std::uses_allocator<typename, typename>`

Typedefs

- template<typename `_Tp`>
using `std::__allocator_base` = `__gnu_cxx::new_allocator<_Tp>`

Functions

- template<typename `_Alloc`>
auto `std::__do_outermost` (`_Alloc &__a, _Alloc *`) -> `decltype(__a.outer_allocator())`
- template<typename `_Alloc`>
`_Alloc &std::__do_outermost` (`_Alloc &__a,...`)
- template<typename `_Alloc`>
auto `std::__outermost` (`_Alloc &__a`) -> `decltype(__do_outermost(__a,&__a))`
- template<typename `_T1`, typename `_T2`>
bool `std::operator!=` (const `allocator<_T1>` &, const `allocator<_T2>` &)

- `template<typename _OutA1, typename _OutA2, typename... _InA>`
`bool std::operator== (const scoped_allocator_adaptor< _OutA1, _InA...> &__a, const scoped_allocator_adaptor< _OutA2, _InA...> &__b) noexcept`

2.4.1 Detailed Description

Classes encapsulating memory operations.

2.4.2 Typedef Documentation

2.4.2.1 `template<typename _Tp > using std::__allocator_base = typedef __gnu_cxx::new_allocator<_Tp>`

An alias to the base class for `std::allocator`.

Used to set the `std::allocator` base class to `__gnu_cxx::new_allocator`.

Template Parameters

| | |
|------------------|---------------------------|
| <code>_Tp</code> | Type of allocated object. |
|------------------|---------------------------|

Definition at line 48 of file `c++allocator.h`.

2.5 Arithmetic Classes

Collaboration diagram for Arithmetic Classes:

Classes

- struct [std::divides<_Tp>](#)
- struct [std::minus<_Tp>](#)
- struct [std::modulus<_Tp>](#)
- struct [std::multiplies<_Tp>](#)
- struct [std::negate<_Tp>](#)
- struct [std::plus<_Tp>](#)

2.5.1 Detailed Description

Because basic math often needs to be done during an algorithm, the library provides functors for those operations. See the documentation for [the base classes](#) for examples of their use.

2.6 Associative

Collaboration diagram for Associative:

Classes

- class `std::map< _Key, _Tp, _Compare, _Alloc >`
- class `std::multimap< _Key, _Tp, _Compare, _Alloc >`
- class `std::multiset< _Key, _Compare, _Alloc >`
- class `std::set< _Key, _Compare, _Alloc >`

2.6.1 Detailed Description

Associative containers allow fast retrieval of data based on keys.

Each container type is parameterized on a `Key` type, and an ordering relation used to sort the elements of the container.

All associative containers must meet certain requirements, summarized in [tables](#).

2.7 Atomics

Classes

- struct [std::__atomic_base<_IntTp>](#)
- struct [std::__atomic_base<_PTp*>](#)
- struct [std::__atomic_flag_base](#)
- struct [std::atomic<_Tp>](#)
- struct [std::atomic<_Tp*>](#)
- struct [std::atomic<bool>](#)
- struct [std::atomic<char>](#)
- struct [std::atomic<char16_t>](#)
- struct [std::atomic<char32_t>](#)
- struct [std::atomic<int>](#)
- struct [std::atomic<long>](#)
- struct [std::atomic<long long>](#)
- struct [std::atomic<short>](#)
- struct [std::atomic<signed char>](#)
- struct [std::atomic<unsigned char>](#)
- struct [std::atomic<unsigned int>](#)
- struct [std::atomic<unsigned long>](#)
- struct [std::atomic<unsigned long long>](#)
- struct [std::atomic<unsigned short>](#)
- struct [std::atomic<wchar_t>](#)
- struct [std::atomic_bool](#)
- struct [std::atomic_flag](#)

Macros

- [#define ATOMIC_BOOL_LOCK_FREE](#)

2.7.1 Detailed Description

Components for performing atomic operations.

2.7.2 Macro Definition Documentation

2.7.2.1 #define ATOMIC_BOOL_LOCK_FREE

Lock-free property.

0 indicates that the types are never lock-free. 1 indicates that the types are sometimes lock-free. 2 indicates that the types are always lock-free.

Definition at line 49 of file atomic_lockfree_defines.h.

2.7.3 Typedef Documentation

2.7.3.1 typedef __atomic_base<char> std::atomic_char

atomic_char

Definition at line 121 of file atomic_base.h.

2.7.3.2 typedef __atomic_base<char16_t> std::atomic_char16_t

atomic_char16_t

Definition at line 160 of file atomic_base.h.

2.7.3.3 typedef __atomic_base< char32_t > std::atomic_char32_t

atomic_char32_t

Definition at line 163 of file atomic_base.h.

2.7.3.4 typedef __atomic_base<int> std::atomic_int

atomic_int

Definition at line 139 of file atomic_base.h.

2.7.3.5 typedef __atomic_base<int_fast16_t> std::atomic_int_fast16_t

atomic_int_fast16_t

Definition at line 201 of file atomic_base.h.

2.7.3.6 typedef __atomic_base<int_fast32_t> std::atomic_int_fast32_t

atomic_int_fast32_t

Definition at line 207 of file atomic_base.h.

2.7.3.7 typedef __atomic_base<int_fast64_t> std::atomic_int_fast64_t

atomic_int_fast64_t

Definition at line 213 of file atomic_base.h.

2.7.3.8 typedef __atomic_base<int_fast8_t> std::atomic_int_fast8_t

atomic_int_fast8_t

Definition at line 195 of file atomic_base.h.

2.7.3.9 typedef __atomic_base<int_least16_t> std::atomic_int_least16_t

atomic_int_least16_t

Definition at line 176 of file atomic_base.h.

2.7.3.10 typedef __atomic_base<int_least32_t> std::atomic_int_least32_t

atomic_int_least32_t

Definition at line 182 of file atomic_base.h.

2.7.3.11 typedef __atomic_base<int_least64_t> std::atomic_int_least64_t

atomic_int_least64_t

Definition at line 188 of file atomic_base.h.

2.7.3.12 typedef __atomic_base<int_least8_t> std::atomic_int_least8_t

atomic_int_least8_t

Definition at line 170 of file atomic_base.h.

2.7.3.13 typedef __atomic_base<intmax_t> std::atomic_intmax_t

atomic_intmax_t

Definition at line 229 of file atomic_base.h.

2.7.3.14 typedef __atomic_base<intptr_t> std::atomic_intptr_t

atomic_intptr_t

Definition at line 220 of file atomic_base.h.

2.7.3.15 typedef __atomic_base<long long> std::atomic_llong

atomic_llong

Definition at line 151 of file atomic_base.h.

2.7.3.16 typedef __atomic_base<long> std::atomic_long

atomic_long

Definition at line 145 of file atomic_base.h.

2.7.3.17 typedef __atomic_base<ptrdiff_t> std::atomic_ptrdiff_t

atomic_ptrdiff_t

Definition at line 235 of file atomic_base.h.

2.7.3.18 typedef __atomic_base<signed char> std::atomic_schar

atomic_schar

Definition at line 127 of file atomic_base.h.

2.7.3.19 typedef __atomic_base<short> std::atomic_short

atomic_short

Definition at line 133 of file atomic_base.h.

2.7.3.20 `typedef __atomic_base<size_t> std::atomic_size_t`

`atomic_size_t`

Definition at line 226 of file `atomic_base.h`.

2.7.3.21 `typedef __atomic_base<unsigned char> std::atomic_uchar`

`atomic_uchar`

Definition at line 130 of file `atomic_base.h`.

2.7.3.22 `typedef __atomic_base<unsigned int> std::atomic_uint`

`atomic_uint`

Definition at line 142 of file `atomic_base.h`.

2.7.3.23 `typedef __atomic_base<uint_fast16_t> std::atomic_uint_fast16_t`

`atomic_uint_fast16_t`

Definition at line 204 of file `atomic_base.h`.

2.7.3.24 `typedef __atomic_base<uint_fast32_t> std::atomic_uint_fast32_t`

`atomic_uint_fast32_t`

Definition at line 210 of file `atomic_base.h`.

2.7.3.25 `typedef __atomic_base<uint_fast64_t> std::atomic_uint_fast64_t`

`atomic_uint_fast64_t`

Definition at line 216 of file `atomic_base.h`.

2.7.3.26 `typedef __atomic_base<uint_fast8_t> std::atomic_uint_fast8_t`

`atomic_uint_fast8_t`

Definition at line 198 of file `atomic_base.h`.

2.7.3.27 `typedef __atomic_base<uint_least16_t> std::atomic_uint_least16_t`

`atomic_uint_least16_t`

Definition at line 179 of file `atomic_base.h`.

2.7.3.28 `typedef __atomic_base<uint_least32_t> std::atomic_uint_least32_t`

`atomic_uint_least32_t`

Definition at line 185 of file `atomic_base.h`.

2.7.3.29 `typedef __atomic_base<uint_least64_t> std::atomic_uint_least64_t`

`atomic_uint_least64_t`

Definition at line 191 of file `atomic_base.h`.

2.7.3.30 `typedef __atomic_base<uint_least8_t> std::atomic_uint_least8_t`

`atomic_uint_least8_t`

Definition at line 173 of file `atomic_base.h`.

2.7.3.31 `typedef __atomic_base<uintmax_t> std::atomic_uintmax_t`

`atomic_uintmax_t`

Definition at line 232 of file `atomic_base.h`.

2.7.3.32 `typedef __atomic_base<uintptr_t> std::atomic_uintptr_t`

`atomic_uintptr_t`

Definition at line 223 of file `atomic_base.h`.

2.7.3.33 `typedef __atomic_base<unsigned long long> std::atomic_ullong`

`atomic_ullong`

Definition at line 154 of file `atomic_base.h`.

2.7.3.34 `typedef __atomic_base<unsigned long> std::atomic_ulong`

`atomic_ulong`

Definition at line 148 of file `atomic_base.h`.

2.7.3.35 `typedef __atomic_base<unsigned short> std::atomic_ushort`

`atomic_ushort`

Definition at line 136 of file `atomic_base.h`.

2.7.3.36 `typedef __atomic_base<wchar_t> std::atomic_wchar_t`

`atomic_wchar_t`

Definition at line 157 of file `atomic_base.h`.

2.7.3.37 `typedef enum std::memory_order std::memory_order`

Enumeration for `memory_order`.

2.7.4 Enumeration Type Documentation

2.7.4.1 `enum std::memory_order`

Enumeration for `memory_order`.

Definition at line 56 of file `atomic_base.h`.

2.7.5 Function Documentation

2.7.5.1 `template<typename _Tp> _Tp std::kill_dependency (_Tp__y) [inline],[noexcept]`

`kill_dependency`

Definition at line 112 of file atomic_base.h.

2.8 Base and Implementation Classes

Collaboration diagram for Base and Implementation Classes:

Classes

- struct `std::__detail::__Default_ranged_hash`
- struct `std::__detail::__Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, __cache_hash_code >`
- struct `std::__detail::__Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, false >`

- `template<typename _IntType, typename _CharT, typename _Traits >
std::basic_ostream<_CharT, _Traits> & std::operator<< (std::basic_ostream<_CharT, _Traits> &__os, const std::geometric_distribution<_IntType> &__x)`
- `template<typename _CharT, typename _Traits >
std::basic_istream<_CharT, _Traits> & std::operator>> (std::basic_istream<_CharT, _Traits> &__is, std::bernoulli_distribution &__x)`
- `template<typename _IntType, typename _CharT, typename _Traits >
std::basic_istream<_CharT, _Traits> & std::operator>> (std::basic_istream<_CharT, _Traits> &__is, std::geometric_distribution<_IntType> &__x)`

2.13.1 Detailed Description

2.13.2 Function Documentation

2.13.2.1 `bool std::operator!= (const std::bernoulli_distribution & __d1, const std::bernoulli_distribution & __d2)`
`[inline]`

Return true if two Bernoulli distributions have different parameters.

Definition at line 3729 of file random.h.

2.13.2.2 `template<typename _IntType> bool std::operator!= (const std::binomial_distribution<_IntType> & __d1, const std::binomial_distribution<_IntType> & __d2)` `[inline]`

Return true if two binomial distributions are different.

Definition at line 3995 of file random.h.

2.13.2.3 `template<typename _IntType> bool std::operator!= (const std::geometric_distribution<_IntType> & __d1, const std::geometric_distribution<_IntType> & __d2)` `[inline]`

Return true if two geometric distributions have different parameters.

Definition at line 4164 of file random.h.

2.13.2.4 `template<typename _IntType> bool std::operator!= (const std::negative_binomial_distribution<_IntType> & __d1, const std::negative_binomial_distribution<_IntType> & __d2)` `[inline]`

Return true if two negative binomial distributions are different.

Definition at line 4409 of file random.h.

2.13.2.5 `template<typename _CharT, typename _Traits> std::basic_ostream<_CharT, _Traits> & std::operator<< (std::basic_ostream<_CharT, _Traits> & __os, const std::bernoulli_distribution & __x)`

Inserts a `bernoulli_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

| | |
|-------------------|---|
| <code>__os</code> | An output stream. |
| <code>__x</code> | A <code>bernoulli_distribution</code> random number distribution. |

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1150 of file bits/random.tcc.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

2.13.2.6 `template<typename _IntType, typename _CharT, typename _Traits> std::basic_ostream<_CharT, _Traits> & std::operator<< (std::basic_ostream<_CharT, _Traits> & __os, const std::geometric_distribution<_IntType> & __x)`

Inserts a `geometric_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

| | |
|-------------------|---|
| <code>__os</code> | An output stream. |
| <code>__x</code> | A <code>geometric_distribution</code> random number distribution. |

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1232 of file `bits/random.tcc`.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

2.13.2.7 `template<typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits>& std::operator>> (`
`std::basic_istream<_CharT, _Traits> & __is, std::bernoulli_distribution & __x)`

Extracts a `bernoulli_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

| | |
|-------------------|---|
| <code>__is</code> | An input stream. |
| <code>__x</code> | A <code>bernoulli_distribution</code> random number generator engine. |

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 3759 of file `random.h`.

References `std::bernoulli_distribution::param()`.

2.13.2.8 `template<typename _IntType, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits> &`
`std::operator>> (std::basic_istream<_CharT, _Traits> & __is, std::geometric_distribution<_IntType> &`
`__x)`

Extracts a `geometric_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

| | |
|-------------------|---|
| <code>__is</code> | An input stream. |
| <code>__x</code> | A <code>geometric_distribution</code> random number generator engine. |

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1256 of file `bits/random.tcc`.

References `std::ios_base::flags()`, `std::geometric_distribution<_IntType>::param()`, and `std::skipws()`.

2.14 Binary Search

Collaboration diagram for Binary Search:

Functions

- `template<typename _ForwardIterator, typename _Tp >`
`bool std::binary_search (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val)`
- `template<typename _ForwardIterator, typename _Tp, typename _Compare >`
`bool std::binary_search (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val, _Compare __comp)`
- `template<typename _ForwardIterator, typename _Tp >`
`pair< _ForwardIterator,`
`_ForwardIterator > std::equal_range (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val)`

`pair< _ForwardIterator,`
`_ForwardIterator > std::equal_range (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val, _`
`Compare __comp)`
- `template<typename _ForwardIterator, typename _Tp >`
`_ForwardIterator std::lower_bound (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val)`
- `template<typename _ForwardIterator, typename _Tp, typename _Compare >`
`_ForwardIterator std::lower_bound (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val, _`
`Compare __comp)`
- `template<typename _ForwardIterator, typename _Tp >`
`_ForwardIterator std::upper_bound (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val)`
- `template<typename _ForwardIterator, typename _Tp, typename _Compare >`
`_ForwardIterator std::upper_bound (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val, _`
`Compare __comp)`

2.14.1 Detailed Description

These algorithms are variations of a classic binary search, and all assume that the sequence being searched is already sorted.

The number of comparisons will be logarithmic (and as few as possible). The number of steps through the sequence will be logarithmic for random-access iterators (e.g., pointers), and linear otherwise.

The LWG has passed Defect Report 270, which notes: *The proposed resolution reinterprets binary search. Instead of thinking about searching for a value in a sorted range, we view that as an important special case of a more general algorithm: searching for the partition point in a partitioned range. We also add a guarantee that the old wording did not: we ensure that the upper bound is no earlier than the lower bound, that the pair returned by equal_range is a valid range, and that the first part of that pair is the lower bound.*

The actual effect of the first sentence is that a comparison functor passed by the user doesn't necessarily need to induce a strict weak ordering relation. Rather, it partitions the range.

2.14.2 Function Documentation

2.14.2.1 `template<typename _ForwardIterator, typename _Tp> bool std::binary_search (_ForwardIterator __first, _ForwardIterator __last, const _Tp & __val)`

Determines whether an element exists in a range.

Parameters

| | |
|----------------------|-------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__val</code> | The search term. |

Returns

True if `__val` (or its equivalent) is in `[__first, __last]`.

Note that this does not actually return an iterator to `__val`. For that, use `std::find` or a container's specialized find member functions.

Definition at line 2258 of file `stl_algo.h`.

2.14.2.2 `template<typename _ForwardIterator, typename _Tp, typename _Compare> bool std::binary_search (_ForwardIterator __first, _ForwardIterator __last, const _Tp & __val, _Compare __comp)`

Determines whether an element exists in a range.

Parameters

| | |
|----------------------|-----------------------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__val</code> | The search term. |
| <code>__comp</code> | A functor to use for comparisons. |

Returns

True if `__val` (or its equivalent) is in `[__first, __last]`.

Note that this does not actually return an iterator to `__val`. For that, use `std::find` or a container's specialized find member functions.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2293 of file `stl_algo.h`.

2.14.2.3 `template<typename _ForwardIterator, typename _Tp> pair<_ForwardIterator, _ForwardIterator> std::equal_range (_ForwardIterator __first, _ForwardIterator __last, const _Tp & __val) [inline]`

Finds the largest subrange in which `__val` could be inserted at any place in it without changing the ordering.

Parameters

| | |
|----------------------|-------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |

| | |
|--------------------|------------------|
| <code>__val</code> | The search term. |
|--------------------|------------------|

Returns

An pair of iterators defining the subrange.

This is equivalent to

```
std::make_pair(lower_bound(__first, __last, __val),
               upper_bound(__first, __last, __val))
```

but does not actually call those functions.

Definition at line 2185 of file stl_algo.h.

2.14.2.4 `template<typename _ForwardIterator, typename _Tp, typename _Compare > pair<_ForwardIterator, _ForwardIterator>
std::equal_range (_ForwardIterator __first, _ForwardIterator __last, const _Tp & __val, _Compare __comp)
[inline]`

Finds the largest subrange in which `__val` could be inserted at any place in it without changing the ordering.

Parameters

| | |
|----------------------|-----------------------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__val</code> | The search term. |
| <code>__comp</code> | A functor to use for comparisons. |

Returns

An pair of iterators defining the subrange.

This is equivalent to

```
std::make_pair(lower_bound(__first, __last, __val, __comp),
               upper_bound(__first, __last, __val, __comp))
```

but does not actually call those functions.

Definition at line 2222 of file stl_algo.h.

2.14.2.5 `template<typename _ForwardIterator, typename _Tp > _ForwardIterator std::lower_bound (_ForwardIterator __first,
_ForwardIterator __last, const _Tp & __val) [inline]`

Finds the first position in which `val` could be inserted without changing the ordering.

Parameters

| | |
|----------------------|-------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__val</code> | The search term. |

Returns

An iterator pointing to the first element *not less than* `val`, or `end()` if every element is less than `val`.

Definition at line 990 of file stl_algobase.h.

2.14.2.6 `template<typename _ForwardIterator, typename _Tp, typename _Compare > _ForwardIterator std::lower_bound (`
`_ForwardIterator __first, _ForwardIterator __last, const _Tp & __val, _Compare __comp) [inline]`

Finds the first position in which `__val` could be inserted without changing the ordering.

Parameters

| | |
|----------------------|-----------------------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__val</code> | The search term. |
| <code>__comp</code> | A functor to use for comparisons. |

Returns

An iterator pointing to the first element *not less than* `__val`, or `end()` if every element is less than `__val`.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2022 of file `stl_algo.h`.

2.14.2.7 `template<typename _ForwardIterator, typename _Tp > _ForwardIterator std::upper_bound (_ForwardIterator __first, _ForwardIterator __last, const _Tp & __val) [inline]`

Finds the last position in which `__val` could be inserted without changing the ordering.

Parameters

| | |
|----------------------|-------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__val</code> | The search term. |

Returns

An iterator pointing to the first element greater than `__val`, or `end()` if no elements are greater than `__val`.

Definition at line 2079 of file `stl_algo.h`.

2.14.2.8 `template<typename _ForwardIterator, typename _Tp, typename _Compare > _ForwardIterator std::upper_bound (_ForwardIterator __first, _ForwardIterator __last, const _Tp & __val, _Compare __comp) [inline]`

Finds the last position in which `__val` could be inserted without changing the ordering.

Parameters

| | |
|----------------------|-----------------------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__val</code> | The search term. |
| <code>__comp</code> | A functor to use for comparisons. |

Returns

An iterator pointing to the first element greater than `__val`, or `end()` if no elements are greater than `__val`.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2111 of file `stl_algo.h`.

2.15.1 Detailed Description

Binders turn functions/functors with two arguments into functors with a single argument, storing an argument to be applied later. For example, a variable `B` of type `binder1st` is constructed from a functor `f` and an argument `x`. Later, `B`'s `operator()` is called with a single argument `y`. The return value is the value of `f(x, y)`. `B` can be *called* with various arguments (`y1, y2, ...`) and will in turn call `f(x, y1), f(x, y2), ...`

The function `bind1st` is provided to save some typing. It takes the function and an argument as parameters, and returns an instance of `binder1st`.

The type `binder2nd` and its creator function `bind2nd` do the same thing, but the stored argument is passed as the second parameter instead of the first, e.g., `bind2nd(std::minus<float>(), 1.3)` will create a functor whose `operator()` accepts a floating-point number, subtracts 1.3 from it, and returns the result. (If `bind1st` had been used, the functor would perform `1.3 - x` instead.

Creator-wrapper functions like `bind1st` are intended to be used in calling algorithms. Their return values will be temporary objects. (The goal is to not require you to type names like `std::binder1st<std::plus<int>>` for declaring a variable to hold the return value from `bind1st(std::plus<int>(), 5)`).

These become more useful when combined with the composition functions.

These functions are deprecated in C++11 and can be replaced by `std::bind` (or `std::tr1::bind`) which is more powerful and flexible, supporting functions with any number of arguments. Uses of `bind1st` can be replaced by `std::bind(f, x, std::placeholders::_1)` and `bind2nd` by `std::bind(f, std::placeholders::_1, x)`.

2.15.2 Function Documentation

2.15.2.1 `template<typename _Func, typename... _BoundArgs> _Bind_helper<__is_socketlike<_Func>::value, _Func, _BoundArgs...>::type std::bind(_Func && __f, _BoundArgs &&... __args) [inline]`

Function template for `std::bind`.

Definition at line 1623 of file `functional`.

2.15.2.2 `template<typename _Result, typename _Func, typename... _BoundArgs> _Bindres_helper<_Result, _Func, _BoundArgs...>::type std::bind(_Func && __f, _BoundArgs &&... __args) [inline]`

Function template for `std::bind<R>`.

Definition at line 1650 of file `functional`.

2.15.2.3 `template<typename _Operation, typename _Tp> binder1st<_Operation> std::bind1st(const _Operation & __fn, const _Tp & __x) [inline]`

One of the [binder functors](#).

Definition at line 131 of file `binders.h`.

2.15.2.4 `template<typename _Operation, typename _Tp> binder2nd<_Operation> std::bind2nd(const _Operation & __fn, const _Tp & __x) [inline]`

One of the [binder functors](#).

Definition at line 166 of file `binders.h`.

2.16 Boolean Operations Classes

Collaboration diagram for Boolean Operations Classes:

Classes

- struct `std::logical_and< _Tp >`
- struct `std::logical_not< _Tp >`
- struct `std::logical_or< _Tp >`

2.16.1 Detailed Description

Here are wrapper functors for Boolean operations: `&&`, `||`, and `!`.

2.17 Branch-Based

Collaboration diagram for Branch-Based:

Modules

- [Base and Policy Classes](#)

Classes

- [class `__gnu_pbds::basic_branch`](#)`< Key, Mapped, Tag, Node_Update, Policy_Ti, _Alloc >`
- [class `__gnu_pbds::tree`](#)`< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >`
- [class `__gnu_pbds::trie`](#)`< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >`

Macros

- `#define PB_DS_BRANCH_BASE`
- `#define PB_DS_TREE_BASE`
- `#define PB_DS_TREE_NODE_AND_IT_TRAITS`
- `#define PB_DS_TRIE_BASE`
- `#define PB_DS_TRIE_NODE_AND_IT_TRAITS`

2.17.1 Detailed Description

2.18 Comparison Classes

Collaboration diagram for Comparison Classes:

Classes

- struct `std::equal_to<_Tp>`
- struct `std::greater<_Tp>`
- struct `std::greater_equal<_Tp>`
- struct `std::less<_Tp>`
- struct `std::less_equal<_Tp>`
- struct `std::not_equal_to<_Tp>`

2.18.1 Detailed Description

The library provides six wrapper functors for all the basic comparisons in C++, like `<`.

2.19 Complex Numbers

Collaboration diagram for Complex Numbers:

Classes

- struct `std::complex< _Tp >`
- struct `std::complex< double >`
- struct `std::complex< float >`
- struct `std::complex< long double >`

Functions

- constexpr `std::complex< float >::complex` (const complex< double > &)
- constexpr `std::complex< float >::complex` (const complex< long double > &)
- constexpr `std::complex< double >::complex` (const complex< long double > &)

2.19.1 Detailed Description

Classes and functions for complex numbers.

2.19.2 Function Documentation

2.19.2.1 `template<typename _Tp> _Tp std::abs (const complex<_Tp> &__z) [inline]`

Return magnitude of z .

Definition at line 596 of file `complex`.

Referenced by `std::tr1::fabs()`, `std::fabs()`, `std::poisson_distribution<_IntType>::operator()()`, and `std::binomial_distribution<_IntType>::operator()()`.

2.19.2.2 `template<typename _Tp> std::complex<_Tp> std::tr1::acosh (const std::complex<_Tp> &__z) [inline]`

`acosh(__z)` [8.1.5].

Definition at line 215 of file `tr1/complex`.

2.19.2.3 `template<typename _Tp> _Tp std::arg (const complex<_Tp> &__z) [inline]`

Return phase angle of z .

Definition at line 623 of file `complex`.

Referenced by `std::arg()`.

2.19.2.4 `template<typename _Tp> std::complex<_Tp> std::tr1::asinh (const std::complex<_Tp> &__z) [inline]`

`asinh(__z)` [8.1.6].

Definition at line 254 of file `tr1/complex`.

2.19.2.5 `template<typename _Tp> std::complex<_Tp> std::tr1::atanh (const std::complex<_Tp> &__z) [inline]`

`atanh(__z)` [8.1.7].

Definition at line 298 of file `tr1/complex`.

2.19.2.6 `template<typename _Tp> complex<_Tp> std::conj (const complex<_Tp> &__z) [inline]`

Return complex conjugate of z .

Definition at line 669 of file `complex`.

2.19.2.7 `template<typename _Tp> complex<_Tp> std::cos (const complex<_Tp> &__z) [inline]`

Return complex cosine of z .

Definition at line 701 of file `complex`.

Referenced by `std::polar()`.

2.19.2.8 `template<typename _Tp> complex<_Tp> std::cosh (const complex<_Tp> &__z) [inline]`

Return complex hyperbolic cosine of z .

Definition at line 731 of file `complex`.

2.19.2.9 `template<typename _Tp> complex<_Tp> std::exp (const complex<_Tp> &__z) [inline]`

Return complex base e exponential of z.

Definition at line 757 of file complex.

Referenced by `std::pow()`.

2.19.2.10 `template<typename _Tp> std::complex<_Tp> std::tr1::fabs (const std::complex<_Tp> &__z) [inline]`

`fabs(__z)` [8.1.8].

Definition at line 307 of file tr1/complex.

References `std::abs()`.

2.19.2.11 `template<typename _Tp> complex<_Tp> std::log (const complex<_Tp> &__z) [inline]`

Return complex natural logarithm of z.

Definition at line 784 of file complex.

Referenced by `std::generate_canonical()`, `std::log10()`, `std::poisson_distribution<_IntType>::operator()`, `std::binomial_distribution<_IntType>::operator()`, `std::normal_distribution<_RealType>::operator()`, `std::gamma_distribution<_RealType>::operator()`, and `std::pow()`.

2.19.2.12 `template<typename _Tp> complex<_Tp> std::log10 (const complex<_Tp> &__z) [inline]`

Return complex base 10 logarithm of z.

Definition at line 789 of file complex.

References `std::log()`.

2.19.2.13 `template<typename _Tp> _Tp std::norm (const complex<_Tp> &__z) [inline]`

Return z magnitude squared.

Definition at line 656 of file complex.

Referenced by `std::complex<_Tp>::operator/()`.

2.19.2.14 `template<typename _Tp> constexpr bool std::operator!= (const complex<_Tp> &__x, const complex<_Tp> &__y) [inline]`

Return false if x is equal to y.

Definition at line 471 of file complex.

2.19.2.15 `template<typename _Tp> constexpr bool std::operator!= (const complex<_Tp> &__x, const _Tp &__y) [inline]`

Return false if x is equal to y.

Definition at line 476 of file complex.

2.19.2.16 `template<typename _Tp> constexpr bool std::operator!= (const _Tp &__x, const complex<_Tp> &__y) [inline]`

Return false if x is equal to y.

Definition at line 481 of file complex.

2.19.2.17 `template<typename _Tp> complex<_Tp> std::operator* (const complex<_Tp> & __x, const complex<_Tp> & __y) [inline]`

Return new complex value x times y .

Definition at line 381 of file `complex`.

2.19.2.18 `template<typename _Tp> complex<_Tp> std::operator* (const complex<_Tp> & __x, const _Tp & __y) [inline]`

Return new complex value x times y .

Definition at line 390 of file `complex`.

2.19.2.19 `template<typename _Tp> complex<_Tp> std::operator* (const _Tp & __x, const complex<_Tp> & __y) [inline]`

Return new complex value x times y .

Definition at line 399 of file `complex`.

2.19.2.20 `template<typename _Tp> complex<_Tp> & std::complex<_Tp>::operator*= (const _Tp & __t)`

Multiply this complex number by t .

Definition at line 240 of file `complex`.

2.19.2.21 `template<typename _Tp> template<typename _Up> complex<_Tp> & std::complex<_Tp>::operator*= (const complex<_Up> & __z)`

Multiply this complex number by z .

Definition at line 294 of file `complex`.

2.19.2.22 `template<typename _Tp> complex<_Tp> std::operator+ (const complex<_Tp> & __x, const complex<_Tp> & __y) [inline]`

Return new complex value x plus y .

Definition at line 321 of file `complex`.

2.19.2.23 `template<typename _Tp> complex<_Tp> std::operator+ (const complex<_Tp> & __x, const _Tp & __y) [inline]`

Return new complex value x plus y .

Definition at line 330 of file `complex`.

2.19.2.24 `template<typename _Tp> complex<_Tp> std::operator+ (const _Tp & __x, const complex<_Tp> & __y) [inline]`

Return new complex value x plus y .

Definition at line 339 of file `complex`.

2.19.2.25 `template<typename _Tp> complex<_Tp> std::operator+ (const complex<_Tp> & __x) [inline]`

Return x .

Definition at line 440 of file `complex`.

2.19.2.26 `template<typename _Tp> template<typename _Up> complex<_Tp> & std::complex<_Tp>::operator+= (const complex<_Up> & __z)`

Add z to this complex number.

Definition at line 271 of file complex.

2.19.2.27 `template<typename _Tp> complex<_Tp> std::operator- (const complex<_Tp> & __x, const complex<_Tp> & __y) [inline]`

Return new complex value x minus y.

Definition at line 351 of file complex.

2.19.2.28 `template<typename _Tp> complex<_Tp> std::operator- (const complex<_Tp> & __x, const _Tp & __y) [inline]`

Return new complex value x minus y.

Definition at line 360 of file complex.

2.19.2.29 `template<typename _Tp> complex<_Tp> std::operator- (const _Tp & __x, const complex<_Tp> & __y) [inline]`

Return new complex value x minus y.

Definition at line 369 of file complex.

2.19.2.30 `template<typename _Tp> complex<_Tp> std::operator- (const complex<_Tp> & __x) [inline]`

Return complex negation of x.

Definition at line 446 of file complex.

2.19.2.31 `template<typename _Tp> template<typename _Up> complex<_Tp> & std::complex<_Tp>::operator-= (const complex<_Up> & __z)`

Subtract z from this complex number.

Definition at line 282 of file complex.

2.19.2.32 `template<typename _Tp> complex<_Tp> std::operator/ (const complex<_Tp> & __x, const complex<_Tp> & __y) [inline]`

Return new complex value x divided by y.

Definition at line 411 of file complex.

2.19.2.33 `template<typename _Tp> complex<_Tp> std::operator/ (const complex<_Tp> & __x, const _Tp & __y) [inline]`

Return new complex value x divided by y.

Definition at line 420 of file complex.

2.19.2.34 `template<typename _Tp> complex<_Tp> std::operator/ (const _Tp & __x, const complex<_Tp> & __y) [inline]`

Return new complex value x divided by y.

Definition at line 429 of file complex.

2.19.2.35 `template<typename _Tp> complex<_Tp> & std::complex<_Tp>::operator/= (const _Tp & __t)`

Divide this complex number by t .

Definition at line 250 of file `complex`.

2.19.2.36 `template<typename _Tp> template<typename _Up> complex<_Tp> & std::complex<_Tp>::operator/= (const complex<_Up> & __z)`

Divide this complex number by z .

Definition at line 307 of file `complex`.

References `std::norm()`.

2.19.2.37 `template<typename _Tp, typename _CharT, class _Traits> basic_ostream<_CharT, _Traits> & std::operator<< (basic_ostream<_CharT, _Traits> & __os, const complex<_Tp> & __x)`

Insertion operator for complex values.

Definition at line 521 of file `complex`.

References `std::ios_base::flags()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::ios_base::precision()`, and `std::basic_ostringstream<_CharT, _Traits, _Alloc>::str()`.

2.19.2.38 `template<typename _Tp> complex<_Tp> & std::complex<_Tp>::operator= (const _Tp & __t)`

Assign this complex number to scalar t .

Definition at line 230 of file `complex`.

2.19.2.39 `template<typename _Tp> template<typename _Up> complex<_Tp> & std::complex<_Tp>::operator= (const complex<_Up> & __z)`

Assign this complex number to complex z .

Definition at line 260 of file `complex`.

2.19.2.40 `template<typename _Tp> constexpr bool std::operator==(const complex<_Tp> & __x, const complex<_Tp> & __y) [inline]`

Return true if x is equal to y .

Definition at line 453 of file `complex`.

2.19.2.41 `template<typename _Tp> constexpr bool std::operator==(const complex<_Tp> & __x, const _Tp & __y) [inline]`

Return true if x is equal to y .

Definition at line 458 of file `complex`.

2.19.2.42 `template<typename _Tp> constexpr bool std::operator==(const _Tp & __x, const complex<_Tp> & __y) [inline]`

Return true if x is equal to y .

Definition at line 463 of file `complex`.

2.19.2.43 `template<typename _Tp, typename _CharT, class _Traits> basic_istream<_CharT, _Traits>& std::operator>> (basic_istream<_CharT, _Traits> & __is, complex<_Tp> & __x)`

Extraction operator for complex values.

Definition at line 488 of file `complex`.

References `std::ios_base::failbit`, `std::basic_istream<_CharT, _Traits>::putback()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

2.19.2.44 `template<typename _Tp> complex<_Tp> std::polar (const _Tp & __rho, const _Tp & __theta = 0) [inline]`

Return complex with magnitude *rho* and angle *theta*.

Definition at line 664 of file `complex`.

References `std::cos()`, and `std::sin()`.

Referenced by `std::pow()`.

2.19.2.45 `template<typename _Tp> complex<_Tp> std::pow (const complex<_Tp> & __z, int __n) [inline]`

Return *x* to the *y*'th power.

Definition at line 979 of file `complex`.

Referenced by `std::gamma_distribution<_RealType>::operator()()`, `std::pow()`, and `std::tr1::pow()`.

2.19.2.46 `template<typename _Tp> complex<_Tp> std::pow (const complex<_Tp> & __x, const _Tp & __y)`

Return *x* to the *y*'th power.

Definition at line 988 of file `complex`.

References `std::exp()`, `std::log()`, `std::polar()`, and `std::pow()`.

2.19.2.47 `template<typename _Tp> complex<_Tp> std::pow (const complex<_Tp> & __x, const complex<_Tp> & __y) [inline]`

Return *x* to the *y*'th power.

Definition at line 1027 of file `complex`.

2.19.2.48 `template<typename _Tp> complex<_Tp> std::pow (const _Tp & __x, const complex<_Tp> & __y) [inline]`

Return *x* to the *y*'th power.

Definition at line 1033 of file `complex`.

References `std::log()`, `std::polar()`, and `std::pow()`.

2.19.2.49 `template<typename _Tp, typename _Up> std::complex<typename __gnu_cxx::__promote_2<_Tp, _Up>::__type> std::tr1::pow (const std::complex<_Tp> & __x, const _Up & __y) [inline]`

Additional overloads [8.1.9].

Definition at line 348 of file `tr1/complex`.

References `std::pow()`.

2.19.2.50 `template<typename _Tp> complex<_Tp> std::sin (const complex<_Tp> & __z) [inline]`

Return complex sine of *z*.

Definition at line 819 of file complex.

Referenced by `std::polar()`.

2.19.2.51 `template<typename _Tp> complex<_Tp> std::sinh (const complex<_Tp> &__z) [inline]`

Return complex hyperbolic sine of z .

Definition at line 849 of file complex.

2.19.2.52 `template<typename _Tp> complex<_Tp> std::sqrt (const complex<_Tp> &__z) [inline]`

Return complex square root of z .

Definition at line 893 of file complex.

Referenced by `std::normal_distribution<_RealType>::operator()()`, and `std::student_t_distribution<_RealType>::operator()()`.

2.19.2.53 `template<typename _Tp> complex<_Tp> std::tan (const complex<_Tp> &__z) [inline]`

Return complex tangent of z .

Definition at line 920 of file complex.

2.19.2.54 `template<typename _Tp> complex<_Tp> std::tanh (const complex<_Tp> &__z) [inline]`

Return complex hyperbolic tangent of z .

Definition at line 948 of file complex.

2.20 Concurrency

Collaboration diagram for Concurrency:

Modules

- [Condition Variables](#)
- [Futures](#)
- [Mutexes](#)
- [Threads](#)

2.20.1 Detailed Description

Components for concurrent operations, including threads, mutexes, and condition variables.

2.21 Condition Variables

Collaboration diagram for Condition Variables:

Classes

- class `std::condition_variable`

Enumerations

- enum `std::cv_status` { `no_timeout`, `timeout` }

2.21.1 Detailed Description

Classes for `condition_variable` support.

2.21.2 Enumeration Type Documentation

2.21.2.1 enum `std::cv_status` [`strong`]

`cv_status`

Definition at line 61 of file `condition_variable`.

2.22 Containers

Collaboration diagram for Containers:

Modules

- [Associative](#)
- [Sequences](#)
- [Unordered Associative](#)

Classes

- class `std::tr2::dynamic_bitset<_WordT, _Alloc>`

2.22.1 Detailed Description

Containers are collections of objects.

A container may hold any type which meets certain requirements, but the type of contained object is chosen at compile time, and all objects in a given container must be of the same type. (Polymorphism is possible by declaring a container of pointers to a base class and then populating it with pointers to instances of derived classes. Variant value types such as the `any` class from `Boost` can also be used.

All contained types must be `Assignable` and `CopyConstructible`. Specific containers may place additional requirements on the types of their contained objects.

Containers manage memory allocation and deallocation themselves when storing your objects. The objects are destroyed when the container is itself destroyed. Note that if you are storing pointers in a container, `delete` is *not* automatically called on the pointers before destroying them.

All containers must meet certain requirements, summarized in [tables](#).

The standard containers are further refined into [Sequences](#) and [Associative Containers](#). [Unordered Associative Containers](#).

- `template<typename _Ex >`
`void std::rethrow_if_nested (const _Ex &__ex)`
- `void std::rethrow_if_nested (const nested_exception &__ex)`
- `terminate_handler std::set_terminate (terminate_handler) noexcept`
- `unexpected_handler std::set_unexpected (unexpected_handler) noexcept`
- `void std::terminate () noexcept __attribute__((__noreturn__))`
- `template<typename _Ex >`
`void std::throw_with_nested (_Ex __ex)`
- `bool std::uncaught_exception () noexcept __attribute__((__pure__))`
- `void std::unexpected () __attribute__((__noreturn__))`

2.27.1 Detailed Description

Classes and functions for reporting errors via exception classes.

2.27.2 Typedef Documentation

2.27.2.1 `typedef void(* std::terminate_handler)()`

If you write a replacement terminate handler, it must be of this type.

Definition at line 87 of file `exception`.

2.27.2.2 `typedef void(* std::unexpected_handler)()`

If you write a replacement unexpected handler, it must be of this type.

Definition at line 90 of file `exception`.

2.27.3 Function Documentation

2.27.3.1 `void __gnu_cxx::__verbose_terminate_handler ()`

A replacement for the standard `terminate_handler` which prints more information about the terminating exception (if any) on `stderr`.

Call

```
std::set_terminate(__gnu_cxx::__verbose_terminate_handler
)
```

to use. For more info, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt02ch06s02.-html>

In 3.4 and later, this is on by default.

2.27.3.2 `template<typename _Ex> exception_ptr std::copy_exception (_Ex __ex) [noexcept]`

Obtain an `exception_ptr` pointing to a copy of the supplied object. This function is deprecated, use `std::make_exception_ptr` instead.

Definition at line 193 of file `exception_ptr.h`.

2.27.3.3 `exception_ptr std::current_exception () [noexcept]`

Obtain an `exception_ptr` to the currently handled exception. If there is none, or the currently handled exception is foreign, return the null value.

Referenced by `std::make_exception_ptr()`.

2.27.3.4 `terminate_handler std::get_terminate () [noexcept]`

Return the current terminate handler.

2.27.3.5 `unexpected_handler std::get_unexpected () [noexcept]`

Return the current unexpected handler.

2.27.3.6 `template<typename _Ex> exception_ptr std::make_exception_ptr (_Ex __ex) [noexcept]`

Obtain an `exception_ptr` pointing to a copy of the supplied object.

Definition at line 169 of file `exception_ptr.h`.

References `std::current_exception()`.

2.27.3.7 `void std::rethrow_exception (exception_ptr)`

Throw the object pointed to by the `exception_ptr`.

2.27.3.8 `template<typename _Ex> void std::rethrow_if_nested (const _Ex & __ex) [inline]`

If `__ex` is derived from `nested_exception`, `__ex.rethrow_nested()`.

Definition at line 146 of file `nested_exception.h`.

2.27.3.9 `void std::rethrow_if_nested (const nested_exception & __ex) [inline]`

Overload, See N2619.

Definition at line 154 of file `nested_exception.h`.

2.27.3.10 `terminate_handler std::set_terminate (terminate_handler) [noexcept]`

Takes a new handler function as an argument, returns the old function.

2.27.3.11 `unexpected_handler std::set_unexpected (unexpected_handler) [noexcept]`

Takes a new handler function as an argument, returns the old function.

2.27.3.12 void std::terminate () [noexcept]

The runtime will call this function if exception handling must be abandoned for any reason. It can also be called by the user.

2.27.3.13 template<typename _Ex> void std::throw_with_nested (_Ex __ex) [inline]

If `__ex` is derived from `nested_exception`, `__ex`. Else, an implementation-defined object derived from both.

Definition at line 136 of file `nested_exception.h`.

2.27.3.14 bool std::uncaught_exception () [noexcept]

[18.6.4]/1: 'Returns true after completing evaluation of a throw-expression until either completing initialization of the exception-declaration in the matching handler or entering `unexpected()` due to the throw; or after entering `terminate()` for any reason other than an explicit call to `terminate()`. [Note: This includes stack unwinding [15.2]. end note]'

2: 'When `uncaught_exception()` is true, throwing an exception can result in a call of `terminate()` (15.5.1).'

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::~~sentry()`.

2.27.3.15 void std::unexpected ()

The runtime will call this function if an exception is thrown which violates the function's exception specification.

2.28 Exceptions

Collaboration diagram for Exceptions:

Classes

- struct `__gnu_pbds::container_error`
- struct `__gnu_pbds::insert_error`
- struct `__gnu_pbds::join_error`
- struct `__gnu_pbds::resize_error`

Functions

- void `__gnu_pbds::__throw_container_error()`
- void `__gnu_pbds::__throw_insert_error()`
- void `__gnu_pbds::__throw_join_error()`
- void `__gnu_pbds::__throw_resize_error()`

2.28.1 Detailed Description

2.29 Extensions

Collaboration diagram for Extensions:

Modules

- [Policy-Based Data Structures](#)
- [SGI](#)

Classes

- [class `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >`](#)

2.29.1 Detailed Description

Components generally useful that are not part of any standard.

2.30 Function Objects

Collaboration diagram for Function Objects:

Modules

- [Adaptors for pointers to members](#)
- [Arithmetic Classes](#)
- [Binder Classes](#)
- [Boolean Operations Classes](#)
- [Comparison Classes](#)
- [Hashes](#)
- [Negators](#)

Classes

- `struct std::binary_function< _Arg1, _Arg2, _Result >`
- `class std::function< _Res(_ArgTypes...)>`
- `class std::reference_wrapper< _Tp >`
- `struct std::unary_function< _Arg, _Result >`

Functions

- `template<typename _Tp, typename _Class >`
`_Mem_fn<_Tp _Class::* > std::mem_fn (_Tp _Class::* __pm) noexcept`

2.30.1 Detailed Description

Function objects, or *functors*, are objects with an `operator()` defined and accessible. They can be passed as arguments to algorithm templates and used in place of a function pointer. Not only is the resulting expressiveness of the library increased, but the generated code can be more efficient than what you might write by hand. When we refer to *functors*, then, generally we include function pointers in the description as well.

Often, functors are only created as temporaries passed to algorithm calls, rather than being created as named variables.

Two examples taken from the standard itself follow. To perform a by-element addition of two vectors `a` and `b` containing `double`, and put the result in `a`, use

```
transform (a.begin(), a.end(), b.begin(), a.begin(), plus<double>());
```

To negate every element in `a`, use

```
transform(a.begin(), a.end(), a.begin(), negate<double>());
```

The addition and negation functions will be inlined directly.

The standard functors are derived from structs named `unary_function` and `binary_function`. These two classes contain nothing but typedefs, to aid in generic (template) programming. If you write your own functors, you might consider doing the same.

2.30.2 Function Documentation

2.30.2.1 `template<typename _Tp, typename _Class > _Mem_fn<_Tp _Class::* > std::mem_fn (_Tp _Class::* __pm)`
`[inline], [noexcept]`

Returns a function object that forwards to the member pointer `pm`.

Definition at line 929 of file `functional`.

2.31 Futures

Collaboration diagram for Futures:

Classes

- class `std::future_error`
- struct `std::is_error_code_enum< future_errc >`

Enumerations

- enum `std::future_errc` { `future_already_retrieved`, `promise_already_satisfied`, `no_state`, `broken_promise` }
- enum `std::future_status` { `ready`, `timeout`, `deferred` }
- enum `std::launch` { `async`, `deferred` }

Functions

- template<typename `_Fn` , typename... `_Args`>
`future< typename result_of
< _Fn(_Args...)>::type > std::async` (launch `__policy`, `_Fn` && `__fn`, `_Args` &&...`__args`)
- template<typename `_Fn` , typename... `_Args`>
`future< typename result_of
< _Fn(_Args...)>::type > std::async` (`_Fn` && `__fn`, `_Args` &&...`__args`)
- const error_category & `std::future_category` () noexcept
- error_code `std::make_error_code` (future_errc `__errc`) noexcept
- error_condition `std::make_error_condition` (future_errc `__errc`) noexcept
- constexpr launch `std::operator&` (launch `__x`, launch `__y`)
- launch & `std::operator&=` (launch & `__x`, launch `__y`)
- constexpr launch `std::operator^` (launch `__x`, launch `__y`)
- launch & `std::operator^=` (launch & `__x`, launch `__y`)
- constexpr launch `std::operator|` (launch `__x`, launch `__y`)
- launch & `std::operator|=` (launch & `__x`, launch `__y`)
- constexpr launch `std::operator~` (launch `__x`)

2.31.1 Detailed Description

Classes for futures support.

2.31.2 Enumeration Type Documentation

2.31.2.1 `enum std::future_errc` [strong]

Error code for futures.

Definition at line 64 of file future.

2.31.2.2 `enum std::future_status` [strong]

Status code for futures.

Definition at line 163 of file future.

2.31.2.3 `enum std::launch` [strong]

Launch code for futures.

Definition at line 126 of file future.

2.31.3 Function Documentation

2.31.3.1 `const error_category& std::future_category ()` [noexcept]

Points to a statically-allocated object derived from `error_category`.

Referenced by `std::make_error_code()`, and `std::make_error_condition()`.

2.31.3.2 `error_code std::make_error_code (future_errc __errc)` [inline], [noexcept]

Overload for `make_error_code`.

Definition at line 82 of file future.

References `std::future_category()`.

2.31.3.3 `error_condition std::make_error_condition (future_errc __errc)` [inline], [noexcept]

Overload for `make_error_condition`.

Definition at line 87 of file future.

References `std::future_category()`.

2.32 Hash-Based

Collaboration diagram for Hash-Based:

Modules

- [Base and Policy Classes](#)

Classes

- `class __gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_Ti, _Alloc >`

`void std::push_heap (_RandomAccessIterator __first, _RandomAccessIterator __last)`
- `template<typename _RandomAccessIterator, typename _Compare >`
`void std::push_heap (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)`
- `template<typename _RandomAccessIterator >`
`void std::sort_heap (_RandomAccessIterator __first, _RandomAccessIterator __last)`
- `template<typename _RandomAccessIterator, typename _Compare >`
`void std::sort_heap (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)`

2.34.1 Detailed Description

2.34.2 Function Documentation

2.34.2.1 `template<typename _RandomAccessIterator > bool std::is_heap (_RandomAccessIterator __first, _RandomAccessIterator __last) [inline]`

Determines whether a range is a heap.

Parameters

| | |
|----------------------|-----------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |

Returns

True if range is a heap, false otherwise.

Definition at line 511 of file `stl_heap.h`.

References `std::is_heap_until()`.

2.34.2.2 `template<typename _RandomAccessIterator, typename _Compare> bool std::is_heap (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp) [inline]`

Determines whether a range is a heap using comparison functor.

Parameters

| | |
|----------------------|----------------------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |
| <code>__comp</code> | Comparison functor to use. |

Returns

True if range is a heap, false otherwise.

Definition at line 524 of file `stl_heap.h`.

References `std::is_heap_until()`.

2.34.2.3 `template<typename _RandomAccessIterator> _RandomAccessIterator std::is_heap_until (_RandomAccessIterator __first, _RandomAccessIterator __last) [inline]`

Search the end of a heap.

Parameters

| | |
|----------------------|-----------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |

Returns

An iterator pointing to the first element not in the heap.

This operation returns the last iterator `i` in `[__first, __last)` for which the range `[__first, i)` is a heap.

Definition at line 462 of file `stl_heap.h`.

References `std::distance()`.

2.34.2.4 `template<typename _RandomAccessIterator, typename _Compare> _RandomAccessIterator std::is_heap_until (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp) [inline]`

Search the end of a heap using comparison functor.

Parameters

| | |
|----------------------|----------------------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |
| <code>__comp</code> | Comparison functor to use. |

Returns

An iterator pointing to the first element not in the heap.

This operation returns the last iterator *i* in `[__first, __last)` for which the range `[__first, i)` is a heap. Comparisons are made using `__comp`.

Definition at line 489 of file `stl_heap.h`.

References `std::distance()`.

Referenced by `std::is_heap()`.

2.34.2.5 `template<typename _RandomAccessIterator > void std::make_heap (_RandomAccessIterator __first, _RandomAccessIterator __last) [inline]`

Construct a heap over a range.

Parameters

| | |
|----------------------|----------------|
| <code>__first</code> | Start of heap. |
| <code>__last</code> | End of heap. |

This operation makes the elements in `[__first, __last)` into a heap.

Definition at line 351 of file `stl_heap.h`.

2.34.2.6 `template<typename _RandomAccessIterator, typename _Compare > void std::make_heap (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp) [inline]`

Construct a heap over a range using comparison functor.

Parameters

| | |
|----------------------|----------------------------|
| <code>__first</code> | Start of heap. |
| <code>__last</code> | End of heap. |
| <code>__comp</code> | Comparison functor to use. |

This operation makes the elements in `[__first, __last)` into a heap. Comparisons are made using `__comp`.

Definition at line 376 of file `stl_heap.h`.

Referenced by `std::priority_queue<_Tp, _Sequence, _Compare >::priority_queue()`.

2.34.2.7 `template<typename _RandomAccessIterator > void std::pop_heap (_RandomAccessIterator __first, _RandomAccessIterator __last) [inline]`

Pop an element off a heap.

Parameters

| | |
|----------------------|----------------|
| <code>__first</code> | Start of heap. |
|----------------------|----------------|

| | |
|---------------------|--------------|
| <code>__last</code> | End of heap. |
|---------------------|--------------|

Precondition

`[__first, __last)` is a valid, non-empty range.

This operation pops the top of the heap. The elements `__first` and `__last-1` are swapped and `[__first, __last-1)` is made into a heap.

Definition at line 263 of file `stl_heap.h`.

2.34.2.8 `template<typename _RandomAccessIterator, typename _Compare> void std::pop_heap (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp) [inline]`

Pop an element off a heap using comparison functor.

Parameters

| | |
|----------------------|----------------------------|
| <code>__first</code> | Start of heap. |
| <code>__last</code> | End of heap. |
| <code>__comp</code> | Comparison functor to use. |

This operation pops the top of the heap. The elements `__first` and `__last-1` are swapped and `[__first, __last-1)` is made into a heap. Comparisons are made using `comp`.

Definition at line 297 of file `stl_heap.h`.

Referenced by `std::priority_queue<_Tp, _Sequence, _Compare>::pop()`.

2.34.2.9 `template<typename _RandomAccessIterator> void std::push_heap (_RandomAccessIterator __first, _RandomAccessIterator __last) [inline]`

Push an element onto a heap.

Parameters

| | |
|----------------------|------------------------|
| <code>__first</code> | Start of heap. |
| <code>__last</code> | End of heap + element. |

This operation pushes the element at `last-1` onto the valid heap over the range `[__first, __last-1)`. After completion, `[__first, __last)` is a valid heap.

Definition at line 150 of file `stl_heap.h`.

2.34.2.10 `template<typename _RandomAccessIterator, typename _Compare> void std::push_heap (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp) [inline]`

Push an element onto a heap using comparison functor.

Parameters

| | |
|----------------------|------------------------|
| <code>__first</code> | Start of heap. |
| <code>__last</code> | End of heap + element. |
| <code>__comp</code> | Comparison functor. |

This operation pushes the element at `__last-1` onto the valid heap over the range `[__first, __last-1)`. After completion, `[__first, __last)` is a valid heap. Compare operations are performed using `comp`.

Definition at line 184 of file `stl_heap.h`.

Referenced by `std::priority_queue<_Tp, _Sequence, _Compare>::push()`.

```
2.34.2.11  template<typename _RandomAccessIterator > void std::sort_heap ( _RandomAccessIterator __first,  
    _RandomAccessIterator __last ) [inline]
```

Sort a heap.

Parameters

| | |
|----------------------|----------------|
| <code>__first</code> | Start of heap. |
| <code>__last</code> | End of heap. |

This operation sorts the valid heap in the range [`__first`,`__last`).

Definition at line 410 of file `stl_heap.h`.

2.34.2.12 `template<typename _RandomAccessIterator , typename _Compare > void std::sort_heap (_RandomAccessIterator
__first, _RandomAccessIterator __last, _Compare __comp) [inline]`

Sort a heap using comparison functor.

Parameters

| | |
|----------------------|----------------------------|
| <code>__first</code> | Start of heap. |
| <code>__last</code> | End of heap. |
| <code>__comp</code> | Comparison functor to use. |

This operation sorts the valid heap in the range [`__first`,`__last`). Comparisons are made using `__comp`.

Definition at line 436 of file `stl_heap.h`.

2.35 Heap-Based

`< wchar_t > std::wstringstream`

2.36.1 Detailed Description

Nearly all of the I/O classes are parameterized on the type of characters they read and write. (The major exception is `ios_base` at the top of the hierarchy.) This is a change from pre-Standard streams, which were not templates.

For ease of use and compatibility, all of the `basic_*` I/O-related classes are given typedef names for both of the builtin character widths (wide and narrow). The typedefs are the same as the pre-Standard names, for example:

```
typedef basic_ifstream<char> ifstream;
```

Because properly forward-declaring these classes can be difficult, you should not do it yourself. Instead, include the `<iosfwd>` header, which contains only declarations of all the I/O classes as well as the typedefs. Trying to forward-declare the typedefs themselves (e.g., `class ostream;`) is not valid ISO C++.

For more specific declarations, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch24.-html>

2.36.2 Typedef Documentation

2.36.2.1 `typedef basic_filebuf<char> std::filebuf`

Class for `char` file buffers.

Definition at line 154 of file `iosfwd`.

2.36.2.2 `typedef basic_fstream<char> std::fstream`

Class for `char` mixed input and output file streams.

Definition at line 163 of file `iosfwd`.

2.36.2.3 `typedef basic_ifstream<char> std::ifstream`

Class for `char` input file streams.

Definition at line 157 of file `iosfwd`.

2.36.2.4 typedef basic_ios<char> std::ios

Base class for `char` streams.

Definition at line 123 of file `iosfwd`.

2.36.2.5 typedef basic_iostream<char> std::iostream

Base class for `char` mixed input and output streams.

Definition at line 139 of file `iosfwd`.

2.36.2.6 typedef basic_istream<char> std::istream

Base class for `char` input streams.

Definition at line 133 of file `iosfwd`.

2.36.2.7 typedef basic_istream<char> std::istream

Class for `char` input memory streams.

Definition at line 145 of file `iosfwd`.

2.36.2.8 typedef basic_ofstream<char> std::ofstream

Class for `char` output file streams.

Definition at line 160 of file `iosfwd`.

2.36.2.9 typedef basic_ostream<char> std::ostream

Base class for `char` output streams.

Definition at line 136 of file `iosfwd`.

2.36.2.10 typedef basic_ostringstream<char> std::ostringstream

Class for `char` output memory streams.

Definition at line 148 of file `iosfwd`.

2.36.2.11 typedef basic_streambuf<char> std::streambuf

Base class for `char` buffers.

Definition at line 130 of file `iosfwd`.

2.36.2.12 typedef basic_stringbuf<char> std::stringbuf

Class for `char` memory buffers.

Definition at line 142 of file `iosfwd`.

2.36.2.13 typedef basic_stringstream<char> std::stringstream

Class for `char` mixed input and output memory streams.

Definition at line 151 of file `iosfwd`.

2.36.2.14 typedef basic_filebuf<wchar_t> std::wfilebuf

Class for `wchar_t` file buffers.

Definition at line 194 of file `iosfwd`.

2.36.2.15 typedef basic_fstream<wchar_t> std::wfstream

Class for `wchar_t` mixed input and output file streams.

Definition at line 203 of file `iosfwd`.

2.36.2.16 typedef basic_ifstream<wchar_t> std::wifstream

Class for `wchar_t` input file streams.

Definition at line 197 of file `iosfwd`.

2.36.2.17 typedef basic_ios<wchar_t> std::wios

Base class for `wchar_t` streams.

Definition at line 167 of file `iosfwd`.

2.36.2.18 typedef basic_iostream<wchar_t> std::wiostream

Base class for `wchar_t` mixed input and output streams.

Definition at line 179 of file `iosfwd`.

2.36.2.19 typedef basic_istream<wchar_t> std::wistream

Base class for `wchar_t` input streams.

Definition at line 173 of file `iosfwd`.

2.36.2.20 typedef basic_istreamstream<wchar_t> std::wistreamstream

Class for `wchar_t` input memory streams.

Definition at line 185 of file `iosfwd`.

2.36.2.21 typedef basic_ofstream<wchar_t> std::wofstream

Class for `wchar_t` output file streams.

Definition at line 200 of file `iosfwd`.

2.36.2.22 typedef basic_ostream<wchar_t> std::wostream

Base class for `wchar_t` output streams.

Definition at line 176 of file `iosfwd`.

2.36.2.23 typedef basic_ostreamstream<wchar_t> std::wostreamstream

Class for `wchar_t` output memory streams.

Definition at line 188 of file `iosfwd`.

2.36.2.24 `typedef basic_streambuf<wchar_t> std::wstreambuf`

Base class for `wchar_t` buffers.

Definition at line 170 of file `iosfwd`.

2.36.2.25 `typedef basic_stringbuf<wchar_t> std::wstringbuf`

Class for `wchar_t` memory buffers.

Definition at line 182 of file `iosfwd`.

2.36.2.26 `typedef basic_stringstream<wchar_t> std::wstringstream`

Class for `wchar_t` mixed input and output memory streams.

Definition at line 191 of file `iosfwd`.

2.37 I/O operators for bitsets.

Functions

- `template<typename _CharT, typename _Traits, typename _WordT, typename _Alloc >`
`std::basic_ostream< _CharT,`
`_Traits > & std::tr2::operator<< (std::basic_ostream< _CharT, _Traits > &__os, const dynamic_bitset< _-`
`WordT, _Alloc > &__x)`
- `template<typename _CharT, typename _Traits, typename _WordT, typename _Alloc >`
`std::basic_istream< _CharT,`
`_Traits > & std::tr2::operator>> (std::basic_istream< _CharT, _Traits > &__is, dynamic_bitset< _WordT, _-`
`Alloc > &__x)`

2.37.1 Detailed Description

Global I/O operators for bitsets. Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace and only accept '0' and '1' characters. The `dynamic_bitset` will grow as necessary to hold the string of bits.

2.38 Invalidation Guarantees

Collaboration diagram for Invalidation Guarantees:

Classes

- struct [__gnu_pbds::basic_invalidation_guarantee](#)
- struct [__gnu_pbds::point_invalidation_guarantee](#)
- struct [__gnu_pbds::range_invalidation_guarantee](#)

2.38.1 Detailed Description

2.39 Iterator Tags

Collaboration diagram for Iterator Tags:

Classes

- struct [std::bidirectional_iterator_tag](#)
- struct [std::forward_iterator_tag](#)
- struct [std::input_iterator_tag](#)
- struct [std::output_iterator_tag](#)
- struct [std::random_access_iterator_tag](#)

2.39.1 Detailed Description

These are empty types, used to distinguish different iterators. The distinction is not made by what they contain, but simply by what they are. Different underlying algorithms can then be used based on the different operations supported by different iterator types.

2.40 Iterators

`bool std::operator>= (const move_iterator< _Iterator > &__x, const move_iterator< _Iterator > &__y)`

2.40.1 Detailed Description

Abstractions for uniform iterating through various underlying types.

2.40.2 Function Documentation

2.40.2.1 `template<typename _Iter > iterator_traits<_Iter>::iterator_category std::__iterator_category (const _Iter &)`
`[inline]`

This function is not a part of the C++ standard but is syntactic sugar for internal library use only.

Definition at line 201 of file `stl_iterator_base_types.h`.

Referenced by `std::__find_if_not()`, `__gnu_debug::__valid_range_aux()`, `std::advance()`, `__gnu_cxx::copy_n()`, `std::copy_n()`, `__gnu_cxx::distance()`, `std::distance()`, `std::find_end()`, `std::partition()`, `std::reverse()`, `std::rotate()`, `__gnu_cxx::uninitialized_copy_n()`, `std::uninitialized_copy_n()`, and `std::unique_copy()`.

2.40.2.2 `template<typename _Container > back_insert_iterator<_Container> std::back_inserter (_Container & __x)`
`[inline]`

Parameters

| | |
|------------------|--------------------------------|
| <code>__x</code> | A container of arbitrary type. |
|------------------|--------------------------------|

Returns

An instance of `back_insert_iterator` working on `__x`.

This wrapper function helps in creating `back_insert_iterator` instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 480 of file `stl_iterator.h`.

Referenced by `std::match_results< _Bi_iter >::format()`, and `std::regex_replace()`.

2.40.2.3 `template<typename _Container > front_insert_iterator<_Container> std::front_inserter (_Container & __x)`
`[inline]`

Parameters

| | |
|------------------|--------------------------------|
| <code>__x</code> | A container of arbitrary type. |
|------------------|--------------------------------|

Returns

An instance of `front_insert_iterator` working on `x`.

This wrapper function helps in creating `front_insert_iterator` instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 570 of file `stl_iterator.h`.

2.40.2.4 `template<typename _Container, typename _Iterator> insert_iterator<_Container> std::inserter (_Container & __x, _Iterator __i) [inline]`

Parameters

| | |
|------------------|--------------------------------|
| <code>__x</code> | A container of arbitrary type. |
|------------------|--------------------------------|

Returns

An instance of `insert_iterator` working on `__x`.

This wrapper function helps in creating `insert_iterator` instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 684 of file `stl_iterator.h`.

2.40.2.5 `template<class _Tp, class _CharT, class _Traits, class _Dist> bool std::operator!= (const istream_iterator< _Tp, _CharT, _Traits, _Dist> & __x, const istream_iterator< _Tp, _CharT, _Traits, _Dist> & __y) [inline]`

Return false if `x` and `y` are both end or not end, or `x` and `y` are the same.

Definition at line 137 of file `stream_iterator.h`.

2.40.2.6 `template<typename _Tp, typename _CharT, typename _Traits, typename _Dist> bool std::operator== (const istream_iterator< _Tp, _CharT, _Traits, _Dist> & __x, const istream_iterator< _Tp, _CharT, _Traits, _Dist> & __y) [inline]`

Return true if `x` and `y` are both end or not end, or `x` and `y` are the same.

Definition at line 130 of file `stream_iterator.h`.

2.40.2.7 `template<typename _Iterator> bool std::operator== (const reverse_iterator< _Iterator> & __x, const reverse_iterator< _Iterator> & __y) [inline]`

Parameters

| | |
|------------------|-----------------------------------|
| <code>__x</code> | A <code>reverse_iterator</code> . |
| <code>__y</code> | A <code>reverse_iterator</code> . |

Returns

A simple `bool`.

Reverse iterators forward many operations to their underlying `base()` iterators. Others are implemented in terms of one another.

Definition at line 292 of file `stl_iterator.h`.

References `std::reverse_iterator< _Iterator>::base()`.

2.41 List-Based

Collaboration diagram for List-Based:

Classes

- class `__gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, _Alloc >`

Macros

- `#define PB_DS_LU_BASE`

2.41.1 Detailed Description

2.42 Locales

Classes

- class `std::codecvt< _InternT, _ExternT, _StateT >`
- class `std::ctype< _CharT >`
- class `std::ctype< char >`
- class `std::ctype< wchar_t >`
- class `std::locale`
- class `std::locale::facet`
- class `std::locale::id`
- class `std::messages< _CharT >`

- class `std::money_get< _CharT, _InIter >`
- class `std::money_put< _CharT, _OutIter >`
- class `std::moneypunct< _CharT, _Intl >`
- class `std::num_get< _CharT, _InIter >`
- class `std::num_put< _CharT, _OutIter >`
- class `std::numpunct< _CharT >`
- class `std::time_base`
- class `std::time_get< _CharT, _InIter >`
- class `std::time_put< _CharT, _OutIter >`

Functions

- `template<typename _Facet >`
`bool std::has_facet (const locale &__loc) throw ()`
- `template<typename _Facet >`
`const _Facet & std::use_facet (const locale &__loc)`

2.42.1 Detailed Description

Classes and functions for internationalization and localization.

2.42.2 Function Documentation

2.42.2.1 `template<typename _Facet > bool std::has_facet (const locale & __loc) throw ()`

Test for the presence of a facet.

`has_facet` tests the locale argument for the presence of the facet type provided as the template parameter. Facets derived from the facet parameter will also return true.

Template Parameters

| | |
|---------------------|---|
| <code>_Facet</code> | The facet type to test the presence of. |
|---------------------|---|

Parameters

| | |
|--------------------|---------------------|
| <code>__loc</code> | The locale to test. |
|--------------------|---------------------|

Returns

true if `__loc` contains a facet of type `_Facet`, else false.

Definition at line 104 of file `locale_classes.tcc`.

2.42.2.2 `template<typename _Facet> const _Facet & std::use_facet (const locale & __loc)`

Return a facet.

`use_facet` looks for and returns a reference to a facet of type `Facet` where `Facet` is the template parameter. If `has_facet(locale)` is true, there is a suitable facet to return. It throws `std::bad_cast` if the locale doesn't contain a facet of type `Facet`.

Template Parameters

| | |
|---------------------|---------------------------|
| <code>_Facet</code> | The facet type to access. |
|---------------------|---------------------------|

Parameters

| | |
|--------------------|--------------------|
| <code>__loc</code> | The locale to use. |
|--------------------|--------------------|

Returns

Reference to facet of type `Facet`.

Exceptions

| | |
|----------------------------|---|
| <code>std::bad_cast</code> | if <code>__loc</code> doesn't contain a facet of type <code>_Facet</code> . |
|----------------------------|---|

Definition at line 132 of file `locale_classes.tcc`.

2.46.1 Detailed Description

2.46.2 Function Documentation

2.46.2.1 `template<typename _II, typename _OI > _OI std::copy (_II __first, _II __last, _OI __result) [inline]`

Copies the range [first,last) into result.

Parameters

| | |
|-----------------------|---------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__result</code> | An output iterator. |

Returns

`result + (first - last)`

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling). Result may not be contained within [first,last); the `copy_backward` function should be used instead.

Note that the end of the output range is permitted to be contained within [first,last).

Definition at line 456 of file `stl_algobase.h`.

2.46.2.2 `template<typename _BI1, typename _BI2 > _BI2 std::copy_backward (_BI1 __first, _BI1 __last, _BI2 __result) [inline]`

Copies the range [first,last) into result.

Parameters

| | |
|-----------------------|---------------------------|
| <code>__first</code> | A bidirectional iterator. |
| <code>__last</code> | A bidirectional iterator. |
| <code>__result</code> | A bidirectional iterator. |

Returns

`result - (first - last)`

The function has the same effect as `copy`, but starts at the end of the range and works its way to the start, returning the start of the result. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Result may not be in the range (first,last]. Use `copy` instead. Note that the start of the output range may overlap [first,last).

Definition at line 630 of file `stl_algobase.h`.

2.46.2.3 `template<typename _InputIterator, typename _OutputIterator, typename _Predicate > _OutputIterator std::copy_if (_InputIterator __first, _InputIterator __last, _OutputIterator __result, _Predicate __pred)`

Copy the elements of a sequence for which a predicate is true.

Parameters

| | |
|-----------------------|---------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__result</code> | An output iterator. |
| <code>__pred</code> | A predicate. |

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range `[__first,__last)` for which `__pred` returns true to the range beginning at `__result`. `copy_if()` is stable, so the relative order of elements that are copied is unchanged.

Definition at line 734 of file `stl_algo.h`.

2.46.2.4 `template<typename _InputIterator, typename _Size, typename _OutputIterator > _OutputIterator std::copy_n (`
`_InputIterator __first, _Size __n, _OutputIterator __result) [inline]`

Copies the range `[first,first+n)` into `[result,result+n)`.

Parameters

| | |
|-----------------------|---------------------------------|
| <code>__first</code> | An input iterator. |
| <code>__n</code> | The number of elements to copy. |
| <code>__result</code> | An output iterator. |

Returns

`result+n`.

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Definition at line 796 of file `stl_algo.h`.

References `std::__iterator_category()`.

2.46.2.5 `template<typename _ForwardIterator, typename _Tp > void std::fill (_ForwardIterator __first, _ForwardIterator __last,`
`const _Tp & __value) [inline]`

Fills the range `[first,last)` with copies of `value`.

Parameters

| | |
|----------------------|---|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__value</code> | A reference-to-const of arbitrary type. |

Returns

Nothing.

This function fills a range with copies of the same value. For char types filling contiguous areas of memory, this becomes an inline call to `memset` or `wmemset`.

Definition at line 732 of file `stl_algobase.h`.

2.46.2.6 `template<typename _OI, typename _Size, typename _Tp> _OI std::fill_n (_OI __first, _Size __n, const _Tp & __value)`
`[inline]`

Fills the range `[first,first+n)` with copies of `value`.

Parameters

| | |
|----------------------|---|
| <code>__first</code> | An output iterator. |
| <code>__n</code> | The count of copies to perform. |
| <code>__value</code> | A reference-to-const of arbitrary type. |

Returns

The iterator at `first+n`.

This function fills a range with copies of the same value. For char types filling contiguous areas of memory, this becomes an inline call to `memset` or `@ wmemset`.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 865. More algorithms that throw away information

Definition at line 792 of file `stl_algobase.h`.

2.46.2.7 `template<typename _ForwardIterator, typename _Generator> void std::generate (_ForwardIterator __first, _ForwardIterator __last, _Generator __gen)`

Assign the result of a function object to each value in a sequence.

Parameters

| | |
|----------------------|---|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__gen</code> | A function object taking no arguments and returning <code>std::iterator_traits<_ForwardIterator>::value_type</code> |

Returns

`generate()` returns no value.

Performs the assignment `*i = __gen()` for each `i` in the range `[__first, __last)`.

Definition at line 4285 of file `stl_algo.h`.

2.46.2.8 `template<typename _OutputIterator, typename _Size, typename _Generator> _OutputIterator std::generate_n (_OutputIterator __first, _Size __n, _Generator __gen)`

Assign the result of a function object to each value in a sequence.

Parameters

| | |
|----------------------|---|
| <code>__first</code> | A forward iterator. |
| <code>__n</code> | The length of the sequence. |
| <code>__gen</code> | A function object taking no arguments and returning <code>std::iterator_traits<_ForwardIterator>::value_type</code> |

Returns

The end of the sequence, `__first+__n`

Performs the assignment `*i = __gen()` for each `i` in the range `[__first, __first+__n)`.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 865. More algorithms that throw away information

Definition at line 4316 of file `stl_algo.h`.

2.46.2.9 `template<typename _InputIterator, typename _Predicate> bool std::is_partitioned (_InputIterator __first, _InputIterator __last, _Predicate __pred) [inline]`

Checks whether the sequence is partitioned.

Parameters

| | |
|----------------------|--------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__pred</code> | A predicate. |

Returns

True if the range `[__first,__last)` is partitioned by `__pred`, i.e. if all elements that satisfy `__pred` appear before those that do not.

Definition at line 582 of file `stl_algo.h`.

References `std::find_if_not()`, and `std::none_of()`.

2.46.2.10 `template<typename _ForwardIterator1, typename _ForwardIterator2> void std::iter_swap (_ForwardIterator1 __a, _ForwardIterator2 __b) [inline]`

Swaps the contents of two iterators.

Parameters

| | |
|------------------|-------------------|
| <code>__a</code> | An iterator. |
| <code>__b</code> | Another iterator. |

Returns

Nothing.

This function swaps the values pointed to by two iterators, not the iterators themselves.

Definition at line 120 of file `stl_algobase.h`.

Referenced by `std::__merge_without_buffer()`, `std::__move_median_to_first()`, `std::__partition()`, `std::__reverse()`, `std::__rotate()`, `std::__unguarded_partition()`, `std::random_shuffle()`, `std::shuffle()`, and `std::swap_ranges()`.

2.46.2.11 `template<typename _II, typename _OI> _OI std::move (_II __first, _II __last, _OI __result) [inline]`

Moves the range `[first,last)` into `result`.

Parameters

| | |
|-----------------------|---------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__result</code> | An output iterator. |

Returns

`result + (first - last)`

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling). Result may not be contained within `[first,last)`; the `move_backward` function should be used instead.

Note that the end of the output range is permitted to be contained within `[first,last)`.

Definition at line 489 of file `stl_algobase.h`.

2.46.2.12 `template<typename _BI1, typename _BI2 > _BI2 std::move_backward (_BI1 __first, _BI1 __last, _BI2 __result)`
`[inline]`

Moves the range [first,last) into result.

Parameters

| | |
|-----------------------|---------------------------|
| <code>__first</code> | A bidirectional iterator. |
| <code>__last</code> | A bidirectional iterator. |
| <code>__result</code> | A bidirectional iterator. |

Returns

`result - (first - last)`

The function has the same effect as `move`, but starts at the end of the range and works its way to the start, returning the start of the result. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Result may not be in the range `(first,last]`. Use `move` instead. Note that the start of the output range may overlap `[first,last)`.

Definition at line 666 of file `stl_algobase.h`.

2.46.2.13 `template<typename _ForwardIterator, typename _Predicate> _ForwardIterator std::partition (_ForwardIterator __first, _ForwardIterator __last, _Predicate __pred) [inline]`

Move elements for which a predicate is true to the beginning of a sequence.

Parameters

| | |
|----------------------|----------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__pred</code> | A predicate functor. |

Returns

An iterator `middle` such that `__pred(i)` is true for each iterator `i` in the range `[__first,middle)` and false for each `i` in the range `[middle,__last)`.

`__pred` must not modify its operand. `partition()` does not preserve the relative ordering of elements in each group, use `stable_partition()` if this is needed.

Definition at line 4488 of file `stl_algo.h`.

References `std::iterator_category()`, and `std::__partition()`.

2.46.2.14 `template<typename _InputIterator, typename _OutputIterator1, typename _OutputIterator2, typename _Predicate> pair<_OutputIterator1, _OutputIterator2> std::partition_copy (_InputIterator __first, _InputIterator __last, _OutputIterator1 __out_true, _OutputIterator2 __out_false, _Predicate __pred)`

Copy the elements of a sequence to separate output sequences depending on the truth value of a predicate.

Parameters

| | |
|-------------------------|---------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__out_true</code> | An output iterator. |

| | |
|--------------------------|---------------------|
| <code>__out_false</code> | An output iterator. |
| <code>__pred</code> | A predicate. |

Returns

A pair designating the ends of the resulting sequences.

Copies each element in the range `[__first,__last)` for which `__pred` returns true to the range beginning at `out_true` and each element for which `__pred` returns false to `__out_false`.

Definition at line 825 of file `stl_algo.h`.

2.46.2.15 `template<typename _ForwardIterator, typename _Predicate> _ForwardIterator std::partition_point (_ForwardIterator __first, _ForwardIterator __last, _Predicate __pred)`

Find the partition point of a partitioned range.

Parameters

| | |
|----------------------|-------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__pred</code> | A predicate. |

Returns

An iterator `mid` such that `all_of(__first, mid, __pred)` and `none_of(mid, __last, __pred)` are both true.

Definition at line 600 of file `stl_algo.h`.

References `std::advance()`, and `std::distance()`.

2.46.2.16 `template<typename _RandomAccessIterator> void std::random_shuffle (_RandomAccessIterator __first, _RandomAccessIterator __last) [inline]`

Randomly shuffle the elements of a sequence.

Parameters

| | |
|----------------------|---------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |

Returns

Nothing.

Reorder the elements in the range `[__first,__last)` using a random distribution, so that every possible ordering of the sequence is equally likely.

Definition at line 4424 of file `stl_algo.h`.

References `std::iter_swap()`.

2.46.2.17 `template<typename _RandomAccessIterator, typename _RandomNumberGenerator> void std::random_shuffle (_RandomAccessIterator __first, _RandomAccessIterator __last, _RandomNumberGenerator && __rand)`

Shuffle the elements of a sequence using a random number generator.

Parameters

| | |
|----------------------|------------------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__rand</code> | The RNG functor or function. |

Returns

Nothing.

Reorders the elements in the range `[__first, __last)` using `__rand` to provide a random distribution. Calling `__rand(-N)` for a positive integer `N` should return a randomly chosen integer from the range `[0,N)`.

Definition at line 4452 of file `stl_algo.h`.

References `std::iter_swap()`.

2.46.2.18 `template<typename _ForwardIterator, typename _Tp> _ForwardIterator std::remove (_ForwardIterator __first, _ForwardIterator __last, const _Tp & __value) [inline]`

Remove elements from a sequence.

Parameters

| | |
|----------------------|--------------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__value</code> | The value to be removed. |

Returns

An iterator designating the end of the resulting sequence.

All elements equal to `__value` are removed from the range `[__first, __last)`.

`remove()` is stable, so the relative order of elements that are not removed is unchanged.

Elements between the end of the resulting sequence and `__last` are still present, but their value is unspecified.

Definition at line 893 of file `stl_algo.h`.

2.46.2.19 `template<typename _InputIterator, typename _OutputIterator, typename _Tp> _OutputIterator std::remove_copy (_InputIterator __first, _InputIterator __last, _OutputIterator __result, const _Tp & __value) [inline]`

Copy a sequence, removing elements of a given value.

Parameters

| | |
|-----------------------|--------------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__result</code> | An output iterator. |
| <code>__value</code> | The value to be removed. |

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range `[__first, __last)` not equal to `__value` to the range beginning at `__result`. `remove_copy()` is stable, so the relative order of elements that are copied is unchanged.

Definition at line 667 of file `stl_algo.h`.

2.46.2.20 `template<typename _InputIterator , typename _OutputIterator , typename _Predicate > _OutputIterator
std::remove_copy_if (_InputIterator __first, _InputIterator __last, _OutputIterator __result, _Predicate __pred)
[inline]`

Copy a sequence, removing elements for which a predicate is true.

Parameters

| | |
|-----------------------|---------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__result</code> | An output iterator. |
| <code>__pred</code> | A predicate. |

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range `[__first,__last)` for which `__pred` returns false to the range beginning at `__result`. `remove_copy_if()` is stable, so the relative order of elements that are copied is unchanged.

Definition at line 700 of file `stl_algo.h`.

2.46.2.21 `template<typename _ForwardIterator, typename _Predicate> _ForwardIterator std::remove_if (_ForwardIterator __first, _ForwardIterator __last, _Predicate __pred) [inline]`

Remove elements from a sequence using a predicate.

Parameters

| | |
|----------------------|---------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__pred</code> | A predicate. |

Returns

An iterator designating the end of the resulting sequence.

All elements for which `__pred` returns true are removed from the range `[__first,__last)`.

`remove_if()` is stable, so the relative order of elements that are not removed is unchanged.

Elements between the end of the resulting sequence and `__last` are still present, but their value is unspecified.

Definition at line 926 of file `stl_algo.h`.

2.46.2.22 `template<typename _ForwardIterator, typename _Tp> void std::replace (_ForwardIterator __first, _ForwardIterator __last, const _Tp & __old_value, const _Tp & __new_value)`

Replace each occurrence of one value in a sequence with another value.

Parameters

| | |
|--------------------------|---------------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__old_value</code> | The value to be replaced. |
| <code>__new_value</code> | The replacement value. |

Returns

`replace()` returns no value.

For each iterator `i` in the range `[__first,__last)` if `*i == __old_value` then the assignment `*i = __new_value` is performed.

Definition at line 4221 of file `stl_algo.h`.

2.46.2.23 `template<typename _InputIterator , typename _OutputIterator , typename _Predicate , typename _Tp > _OutputIterator
std::replace_copy_if (_InputIterator __first, _InputIterator __last, _OutputIterator __result, _Predicate __pred, const _Tp
& __new_value) [inline]`

Copy a sequence, replacing each value for which a predicate returns true with another value.

Parameters

| | |
|--------------------------|------------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__result</code> | An output iterator. |
| <code>__pred</code> | A predicate. |
| <code>__new_value</code> | The replacement value. |

Returns

The end of the output sequence, `__result+(__last-__first)`.

Copies each element in the range `[__first,__last)` to the range `[__result,__result+(__last-__first))` replacing elements for which `__pred` returns true with `__new_value`.

Definition at line 3170 of file `stl_algo.h`.

```
2.46.2.24 template<typename _ForwardIterator, typename _Predicate, typename _Tp> void std::replace_if ( _ForwardIterator
    __first, _ForwardIterator __last, _Predicate __pred, const _Tp & __new_value )
```

Replace each value in a sequence for which a predicate returns true with another value.

Parameters

| | |
|--------------------------|------------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__pred</code> | A predicate. |
| <code>__new_value</code> | The replacement value. |

Returns

`replace_if()` returns no value.

For each iterator `i` in the range `[__first,__last)` if `__pred(*i)` is true then the assignment `*i = __new_value` is performed.

Definition at line 4253 of file `stl_algo.h`.

```
2.46.2.25 template<typename _BidirectionalIterator> void std::reverse ( _BidirectionalIterator __first, _BidirectionalIterator __last
    ) [inline]
```

Reverse a sequence.

Parameters

| | |
|----------------------|---------------------------|
| <code>__first</code> | A bidirectional iterator. |
| <code>__last</code> | A bidirectional iterator. |

Returns

`reverse()` returns no value.

Reverses the order of the elements in the range `[__first,__last)`, so that the first element becomes the last etc. For every `i` such that $0 \leq i < (\text{__last} - \text{__first})/2$, `reverse()` swaps `*(__first+i)` and `*(__last-(i+1))`

Definition at line 1177 of file `stl_algo.h`.

References `std::__iterator_category()`, and `std::__reverse()`.

2.46.2.26 `template<typename _BidirectionalIterator, typename _OutputIterator> _OutputIterator std::reverse_copy (`
`_BidirectionalIterator __first, _BidirectionalIterator __last, _OutputIterator __result)`

Copy a sequence, reversing its elements.

Parameters

| | |
|-----------------------|---------------------------|
| <code>__first</code> | A bidirectional iterator. |
| <code>__last</code> | A bidirectional iterator. |
| <code>__result</code> | An output iterator. |

Returns

An iterator designating the end of the resulting sequence.

Copies the elements in the range `[__first, __last)` to the range `[__result, __result+(__last-__first))` such that the order of the elements is reversed. For every `i` such that $0 \leq i < (__last - __first)$, `reverse_copy()` performs the assignment `*(__result+(__last-__first)-1-i) = *(__first+i)`. The ranges `[__first, __last)` and `[__result, __result+(__last-__first))` must not overlap.

Definition at line 1204 of file `stl_algo.h`.

```
2.46.2.27 template<typename _ForwardIterator > void std::rotate ( _ForwardIterator __first, _ForwardIterator __middle,
    _ForwardIterator __last ) [inline]
```

Rotate the elements of a sequence.

Parameters

| | |
|-----------------------|---------------------|
| <code>__first</code> | A forward iterator. |
| <code>__middle</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |

Returns

Nothing.

Rotates the elements of the range `[__first, __last)` by `(__middle - __first)` positions so that the element at `__middle` is moved to `__first`, the element at `__middle+1` is moved to `__first+1` and so on for each element in the range `[__first, __last)`.

This effectively swaps the ranges `[__first, __middle)` and `[__middle, __last)`.

Performs `*(__first+(n+(__last-__middle))%(__last-__first))=*(__first+n)` for each `n` in the range `[0, __last-__first)`.

Definition at line 1410 of file `stl_algo.h`.

References `std::__iterator_category()`, and `std::__rotate()`.

Referenced by `std::__inplace_stable_partition()`, `std::__merge_without_buffer()`, `std::__rotate_adaptive()`, and `std::__stable_partition_adaptive()`.

```
2.46.2.28 template<typename _ForwardIterator, typename _OutputIterator > _OutputIterator std::rotate_copy ( _ForwardIterator
    __first, _ForwardIterator __middle, _ForwardIterator __last, _OutputIterator __result ) [inline]
```

Copy a sequence, rotating its elements.

Parameters

| | |
|----------------------|---------------------|
| <code>__first</code> | A forward iterator. |
|----------------------|---------------------|

| | |
|-----------------------|---------------------|
| <code>__middle</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__result</code> | An output iterator. |

Returns

An iterator designating the end of the resulting sequence.

Copies the elements of the range `[__first,__last)` to the range beginning at

Returns

, rotating the copied elements by `(__middle-__first)` positions so that the element at `__middle` is moved to `__result`, the element at `__middle+1` is moved to `__result+1` and so on for each element in the range `[__first,__last)`.

Performs $*(__result+(n+(__last-__middle))\%(__last-__first))=*(__first+n)$ for each `n` in the range `[0,__last-__first)`.

Definition at line 1445 of file `stl_algo.h`.

2.46.2.29 `template<typename _RandomAccessIterator, typename _UniformRandomNumberGenerator > void std::shuffle (`
`_RandomAccessIterator __first, _RandomAccessIterator __last, _UniformRandomNumberGenerator && __g)`

Shuffle the elements of a sequence using a uniform random number generator.

Parameters

| | |
|----------------------|---|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__g</code> | A <code>UniformRandomNumberGenerator</code> (26.5.1.3). |

Returns

Nothing.

Reorders the elements in the range `[__first,__last)` using `__g` to provide random numbers.

Definition at line 3705 of file `stl_algo.h`.

References `std::iter_swap()`.

2.46.2.30 `template<typename _ForwardIterator, typename _Predicate > _ForwardIterator std::stable_partition (`
`_FowardIterator __first, _ForwardIterator __last, _Predicate __pred) [inline]`

Move elements for which a predicate is true to the beginning of a sequence, preserving relative ordering.

Parameters

| | |
|----------------------|----------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__pred</code> | A predicate functor. |

Returns

An iterator `middle` such that `__pred(i)` is true for each iterator `i` in the range `[first,middle)` and false for each `i` in the range `[middle,last)`.

Performs the same function as `partition()` with the additional guarantee that the relative ordering of elements in each group is preserved, so any two elements `x` and `y` in the range `[__first,__last)` such that `__pred(x) == __pred(y)` will have the same relative ordering after calling `stable_partition()`.

Definition at line 1652 of file `stl_algo.h`.

2.46.2.31 `template<typename _ForwardIterator1, typename _ForwardIterator2 > _ForwardIterator2 std::swap_ranges (`
`_ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2)`

Swap the elements of two sequences.

Parameters

| | |
|-----------------------|---------------------|
| <code>__first1</code> | A forward iterator. |
| <code>__last1</code> | A forward iterator. |
| <code>__first2</code> | A forward iterator. |

Returns

An iterator equal to `first2+(last1-first1)`.

Swaps each element in the range `[first1,last1)` with the corresponding element in the range `[first2,(last1-first1))`. The ranges must not overlap.

Definition at line 166 of file `stl_algo.h`.

References `std::iter_swap()`.

Referenced by `std::__rotate()`.

2.46.2.32 `template<typename _InputIterator, typename _OutputIterator, typename _UnaryOperation > _OutputIterator`
`std::transform (_InputIterator __first, _InputIterator __last, _OutputIterator __result, _UnaryOperation __unary_op)`

Perform an operation on a sequence.

Parameters

| | |
|-------------------------|---------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__result</code> | An output iterator. |
| <code>__unary_op</code> | A unary operator. |

Returns

An output iterator equal to `__result+(__last-__first)`.

Applies the operator to each element in the input range and assigns the results to successive elements of the output sequence. Evaluates `*(__result+N)=unary_op(*(__first+N))` for each `N` in the range `[0,__last-__first)`.

`unary_op` must not alter its argument.

Definition at line 4152 of file `stl_algo.h`.

2.46.2.33 `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _BinaryOperation >`
`_OutputIterator std::transform (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _OutputIterator`
`__result, _BinaryOperation __binary_op)`

Perform an operation on corresponding elements of two sequences.

Parameters

| | |
|--------------------------|---------------------|
| <code>__first1</code> | An input iterator. |
| <code>__last1</code> | An input iterator. |
| <code>__first2</code> | An input iterator. |
| <code>__result</code> | An output iterator. |
| <code>__binary_op</code> | A binary operator. |

Returns

An output iterator equal to `result+(last-first)`.

Applies the operator to the corresponding elements in the two input ranges and assigns the results to successive elements of the output sequence. Evaluates `*(__result+N)=__binary_op(*(__first1+N),*(__first2+N))` for each `N` in the range `[0,__last1-__first1)`.

`binary_op` must not alter either of its arguments.

Definition at line 4189 of file `stl_algo.h`.

2.46.2.34 `template<typename _ForwardIterator > _ForwardIterator std::unique (_ForwardIterator __first, _ForwardIterator __last)`
`[inline]`

Remove consecutive duplicate values from a sequence.

Parameters

| | |
|----------------------|---------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |

Returns

An iterator designating the end of the resulting sequence.

Removes all but the first element from each group of consecutive values that compare equal. `unique()` is stable, so the relative order of elements that are not removed is unchanged. Elements between the end of the resulting sequence and `__last` are still present, but their value is unspecified.

Definition at line 992 of file `stl_algo.h`.

2.46.2.35 `template<typename _ForwardIterator, typename _BinaryPredicate > _ForwardIterator std::unique (_ForwardIterator`
`__first, _ForwardIterator __last, _BinaryPredicate __binary_pred) [inline]`

Remove consecutive values from a sequence using a predicate.

Parameters

| | |
|----------------------------|---------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__binary_pred</code> | A binary predicate. |

Returns

An iterator designating the end of the resulting sequence.

Removes all but the first element from each group of consecutive values for which `__binary_pred` returns true. `unique()` is stable, so the relative order of elements that are not removed is unchanged. Elements between the end of the resulting sequence and `__last` are still present, but their value is unspecified.

Definition at line 1022 of file `stl_algo.h`.

2.46.2.36 `template<typename _InputIterator, typename _OutputIterator> _OutputIterator std::unique_copy (_InputIterator __first, _InputIterator __last, _OutputIterator __result) [inline]`

Copy a sequence, removing consecutive duplicate values.

Parameters

| | |
|-----------------------|---------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__result</code> | An output iterator. |

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range `[__first,__last)` to the range beginning at `__result`, except that only the first element is copied from groups of consecutive elements that compare equal. `unique_copy()` is stable, so the relative order of elements that are copied is unchanged.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 241. Does `unique_copy()` require CopyConstructible and Assignable?

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 538. 241 again: Does `unique_copy()` require CopyConstructible and Assignable?

Definition at line 4352 of file `stl_algo.h`.

References `std::__iterator_category()`, and `std::__unique_copy()`.

```
2.46.2.37  template<typename _InputIterator , typename _OutputIterator , typename _BinaryPredicate > _OutputIterator
            std::unique_copy ( _InputIterator __first, _InputIterator __last, _OutputIterator __result, _BinaryPredicate __binary_pred
            ) [inline]
```

Copy a sequence, removing consecutive values using a predicate.

Parameters

| | |
|----------------------------|---------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__result</code> | An output iterator. |
| <code>__binary_pred</code> | A binary predicate. |

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range `[__first,__last)` to the range beginning at `__result`, except that only the first element is copied from groups of consecutive elements for which `__binary_pred` returns true. `unique_copy()` is stable, so the relative order of elements that are copied is unchanged.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 241. Does `unique_copy()` require CopyConstructible and Assignable?

Definition at line 4393 of file `stl_algo.h`.

2.47 Mutexes

Collaboration diagram for Mutexes:

Classes

- struct `std::adopt_lock_t`
- struct `std::defer_lock_t`
- class `std::lock_guard< _Mutex >`
- class `std::mutex`
- struct `std::once_flag`
- class `std::recursive_mutex`
- struct `std::try_to_lock_t`
- class `std::unique_lock< _Mutex >`

Functions

- mutex & `std::__get_once_mutex()`
- void `std::__once_proxy` (void)
- void `std::__set_once_function_lock_ptr` (unique_lock< mutex > *)
- template<typename _Lock >
unique_lock< _Lock > `std::__try_to_lock` (_Lock &__l)
- template<typename _Callable, typename... _Args>
void `std::call_once` (once_flag &__once, _Callable &&__f, _Args &&...__args)
- template<typename _L1, typename _L2, typename... _L3>
void `std::lock` (_L1 &__l1, _L2 &__l2, _L3 &...__l3)
- template<typename _Mutex >
void `std::swap` (unique_lock< _Mutex > &__x, unique_lock< _Mutex > &__y) noexcept
- template<typename _Lock1, typename _Lock2, typename... _Lock3>
int `std::try_lock` (_Lock1 &__l1, _Lock2 &__l2, _Lock3 &...__l3)

Variables

- function< void()> `std::__once_function`
- constexpr adopt_lock_t `std::adopt_lock`
- constexpr defer_lock_t `std::defer_lock`
- constexpr try_to_lock_t `std::try_to_lock`

2.47.1 Detailed Description

Classes for mutex support.

2.47.2 Function Documentation

2.47.2.1 `template<typename _Callable, typename... _Args> void std::call_once (once_flag & __once, _Callable && __f, _Args &&... __args)`

`call_once`

Definition at line 733 of file `mutex`.

2.47.2.2 `template<typename _L1, typename _L2, typename... _L3> void std::lock (_L1 & __l1, _L2 & __l2, _L3 &... __l3)`

Generic lock.

Parameters

| | |
|-------------------|--|
| <code>__l1</code> | Meets Mutex requirements (<code>try_lock()</code> may throw). |
| <code>__l2</code> | Meets Mutex requirements (<code>try_lock()</code> may throw). |
| <code>__l3</code> | Meets Mutex requirements (<code>try_lock()</code> may throw). |

Exceptions

| | |
|-----------|--|
| <i>An</i> | exception thrown by an argument's <code>lock()</code> or <code>try_lock()</code> member. |
|-----------|--|

Postcondition

All arguments are locked.

All arguments are locked via a sequence of calls to `lock()`, `try_lock()` and `unlock()`. If the call exits via an exception any locks that were obtained will be released.

Definition at line 670 of file `mutex`.

References `std::tie()`.

2.47.2.3 `template<typename _Mutex > void std::swap (unique_lock< _Mutex > & __x, unique_lock< _Mutex > & __y)`
`[inline], [noexcept]`

Partial specialization for `unique_lock` objects.

Definition at line 569 of file `mutex`.

2.47.2.4 `template<typename _Lock1, typename _Lock2, typename... _Lock3> int std::try_lock (_Lock1 & __l1, _Lock2 & __l2, _Lock3 &... __l3)`

Generic `try_lock`.

Parameters

| | |
|-------------------|--|
| <code>__l1</code> | Meets Mutex requirements (<code>try_lock()</code> may throw). |
| <code>__l2</code> | Meets Mutex requirements (<code>try_lock()</code> may throw). |
| <code>__l3</code> | Meets Mutex requirements (<code>try_lock()</code> may throw). |

Returns

Returns -1 if all `try_lock()` calls return true. Otherwise returns a 0-based index corresponding to the argument that returned false.

Postcondition

Either all arguments are locked, or none will be.

Sequentially calls `try_lock()` on each argument.

Definition at line 646 of file `mutex`.

References `std::tie()`.

2.48 Negators

Collaboration diagram for Negators:

Classes

- class `std::binary_negate<_Predicate>`
- class `std::unary_negate<_Predicate>`

Functions

- `template<typename _Predicate>`
`unary_negate<_Predicate> std::not1 (const _Predicate &__pred)`
- `template<typename _Predicate>`
`binary_negate<_Predicate> std::not2 (const _Predicate &__pred)`

2.48.1 Detailed Description

The functions `not1` and `not2` each take a predicate functor and return an instance of `unary_negate` or `binary_negate`, respectively. These classes are functors whose `operator()` performs the stored predicate function and then returns the negation of the result.

For example, given a vector of integers and a trivial predicate,

```

struct IntGreaterThanThree
: public std::unary_function<int, bool>
{
    bool operator() (int x) { return x > 3; }
};

std::find_if (v.begin(), v.end(), not1(IntGreaterThanThree()));
  
```

The call to `find_if` will locate the first index (*i*) of *v* for which `!(v[i] > 3)` is true.

The `not1/unary_negate` combination works on predicates taking a single argument. The `not2/binary_negate` combination works on predicates which take two arguments.

2.48.2 Function Documentation

2.48.2.1 `template<typename _Predicate> unary_negate<_Predicate> std::not1 (const _Predicate &__pred) [inline]`

One of the [negation functors](#).

Definition at line 718 of file `stl_function.h`.

```
2.48.2.2  template<typename _Predicate > binary_negate<_Predicate> std::not2 ( const _Predicate & __pred ) [inline]
```

One of the [negation functors](#).

Definition at line 743 of file stl_function.h.

2.49.1 Detailed Description

2.49.2 Function Documentation

2.49.2.1 `template<typename _ForwardIterator > _ForwardIterator std::adjacent_find (_ForwardIterator __first, _ForwardIterator __last) [inline]`

Find two adjacent values in a sequence that are equal.

Parameters

| | |
|----------------------|---------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |

Returns

The first iterator `i` such that `i` and `i+1` are both valid iterators in `[__first, __last)` and such that `*i == *(i+1)`, or `__last` if no such iterator exists.

Definition at line 3897 of file `stl_algo.h`.

2.49.2.2 `template<typename _ForwardIterator, typename _BinaryPredicate > _ForwardIterator std::adjacent_find (`
`_ForwardIterator __first, _ForwardIterator __last, _BinaryPredicate __binary_pred) [inline]`

Find two adjacent values in a sequence using a predicate.

Parameters

| | |
|----------------------------|---------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__binary_pred</code> | A binary predicate. |

Returns

The first iterator `i` such that `i` and `i+1` are both valid iterators in `[__first,__last)` and such that `__binary_pred(*i,*i+1)` is true, or `__last` if no such iterator exists.

Definition at line 3922 of file `stl_algo.h`.

2.49.2.3 `template<typename _InputIterator, typename _Predicate> bool std::all_of (_InputIterator __first, _InputIterator __last, _Predicate __pred) [inline]`

Checks that a predicate is true for all the elements of a sequence.

Parameters

| | |
|----------------------|--------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__pred</code> | A predicate. |

Returns

True if the check is true, false otherwise.

Returns true if `__pred` is true for each element in the range `[__first,__last)`, and false otherwise.

Definition at line 508 of file `stl_algo.h`.

References `std::find_if_not()`.

2.49.2.4 `template<typename _InputIterator, typename _Predicate> bool std::any_of (_InputIterator __first, _InputIterator __last, _Predicate __pred) [inline]`

Checks that a predicate is false for at least an element of a sequence.

Parameters

| | |
|----------------------|--------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__pred</code> | A predicate. |

Returns

True if the check is true, false otherwise.

Returns true if an element exists in the range `[__first,__last)` such that `__pred` is true, and false otherwise.

Definition at line 543 of file `stl_algo.h`.

References `std::none_of()`.

2.49.2.5 `template<typename _InputIterator, typename _Tp> iterator_traits<_InputIterator>::difference_type std::count (_InputIterator __first, _InputIterator __last, const _Tp & __value) [inline]`

Count the number of copies of a value in a sequence.

Parameters

| | |
|----------------------|--------------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__value</code> | The value to be counted. |

Returns

The number of iterators `i` in the range `[__first,__last)` for which `*i == __value`

Definition at line 3947 of file `stl_algo.h`.

2.49.2.6 `template<typename _InputIterator, typename _Predicate> iterator_traits<_InputIterator>::difference_type std::count_if (`
`_InputIterator __first, _InputIterator __last, _Predicate __pred) [inline]`

Count the elements of a sequence for which a predicate is true.

Parameters

| | |
|----------------------|--------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__pred</code> | A predicate. |

Returns

The number of iterators `i` in the range `[__first,__last)` for which `__pred(*i)` is true.

Definition at line 3970 of file `stl_algo.h`.

2.49.2.7 `template<typename _Iter1, typename _Iter2, typename _BinaryPredicate> bool std::equal (_Iter1 __first1, _Iter1`
`__last1, _Iter2 __first2, _BinaryPredicate __binary_pred) [inline]`

Tests a range for element-wise equality.

Parameters

| | |
|----------------------------|--|
| <code>__first1</code> | An input iterator. |
| <code>__last1</code> | An input iterator. |
| <code>__first2</code> | An input iterator. |
| <code>__binary_pred</code> | A binary predicate functor . |

Returns

A boolean true or false.

This compares the elements of two ranges using the `binary_pred` parameter, and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1079 of file `stl_algobase.h`.

2.49.2.8 `template<typename _II1, typename _II2> bool std::equal (_II1 __first1, _II1 __last1, _II2 __first2) [inline]`

Tests a range for element-wise equality.

Parameters

| | |
|-----------------------|--------------------|
| <code>__first1</code> | An input iterator. |
| <code>__last1</code> | An input iterator. |
| <code>__first2</code> | An input iterator. |

Returns

A boolean true or false.

This compares the elements of two ranges using `==` and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1047 of file `stl_algobase.h`.

Referenced by `std::operator==()`.

2.49.2.9 `template<typename _InputIterator, typename _Tp > _InputIterator std::find (_InputIterator __first, _InputIterator __last, const _Tp & __val) [inline]`

Find the first occurrence of a value in a sequence.

Parameters

| | |
|----------------------|--------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__val</code> | The value to find. |

Returns

The first iterator `i` in the range `[__first, __last)` such that `*i == __val`, or `__last` if no such iterator exists.

Definition at line 3770 of file `stl_algo.h`.

References `std::__find_if()`.

2.49.2.10 `template<typename _ForwardIterator1, typename _ForwardIterator2 > _ForwardIterator1 std::find_end (_ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2, _ForwardIterator2 __last2) [inline]`

Find last matching subsequence in a sequence.

Parameters

| | |
|-----------------------|-----------------------------|
| <code>__first1</code> | Start of range to search. |
| <code>__last1</code> | End of range to search. |
| <code>__first2</code> | Start of sequence to match. |
| <code>__last2</code> | End of sequence to match. |

Returns

The last iterator `i` in the range `[__first1, __last1 - (__last2 - __first2))` such that `*(i+N) == *(__first2+N)` for each `N` in the range `[0, __last2 - __first2)`, or `__last1` if no such iterator exists.

Searches the range `[__first1, __last1)` for a sub-sequence that compares equal value-by-value with the sequence given by `[__first2, __last2)` and returns an iterator to the `__first` element of the sub-sequence, or `__last1` if the sub-sequence is not found. The sub-sequence will be the last such subsequence contained in `[__first1, __last1)`.

Because the sub-sequence must lie completely within the range $[_first1, _last1)$ it must start at a position less than $_last1 - (_last2 - _first2)$ where $_last2 - _first2$ is the length of the sub-sequence. This means that the returned iterator i will be in the range $[_first1, _last1 - (_last2 - _first2))$

Definition at line 425 of file `stl_algo.h`.

References `std::iterator_category()`.

```
2.49.2.11 template<typename _ForwardIterator1, typename _ForwardIterator2, typename _BinaryPredicate> _ForwardIterator1
std::find_end( _ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2, _ForwardIterator2
__last2, _BinaryPredicate __comp ) [inline]
```

Find last matching subsequence in a sequence using a predicate.

Parameters

| | |
|-----------------------|-----------------------------|
| <code>__first1</code> | Start of range to search. |
| <code>__last1</code> | End of range to search. |
| <code>__first2</code> | Start of sequence to match. |
| <code>__last2</code> | End of sequence to match. |
| <code>__comp</code> | The predicate to use. |

Returns

The last iterator i in the range $[_first1, _last1 - (_last2 - _first2))$ such that `predicate(*(i+N), (_first2+N))` is true for each N in the range $[0, _last2 - _first2)$, or `__last1` if no such iterator exists.

Searches the range $[_first1, _last1)$ for a sub-sequence that compares equal value-by-value with the sequence given by $[_first2, _last2)$ using `comp` as a predicate and returns an iterator to the first element of the sub-sequence, or `__last1` if the sub-sequence is not found. The sub-sequence will be the last such subsequence contained in $[_first1, _last1)$.

Because the sub-sequence must lie completely within the range $[_first1, _last1)$ it must start at a position less than $_last1 - (_last2 - _first2)$ where $_last2 - _first2$ is the length of the sub-sequence. This means that the returned iterator i will be in the range $[_first1, _last1 - (_last2 - _first2))$

Definition at line 474 of file `stl_algo.h`.

References `std::iterator_category()`.

```
2.49.2.12 template<typename _InputIterator, typename _ForwardIterator> _InputIterator std::find_first_of( _InputIterator __first1,
_InputIterator __last1, _ForwardIterator __first2, _ForwardIterator __last2 )
```

Find element from a set in a sequence.

Parameters

| | |
|-----------------------|----------------------------|
| <code>__first1</code> | Start of range to search. |
| <code>__last1</code> | End of range to search. |
| <code>__first2</code> | Start of match candidates. |
| <code>__last2</code> | End of match candidates. |

Returns

The first iterator i in the range $[_first1, _last1)$ such that `*i == *(i2)` such that $i2$ is an iterator in $[_first2, _last2)$, or `__last1` if no such iterator exists.

Searches the range $[_first1, _last1)$ for an element that is equal to some element in the range $[_first2, _last2)$. If found, returns an iterator in the range $[_first1, _last1)$, otherwise returns `__last1`.

Definition at line 3825 of file `stl_algo.h`.

```
2.49.2.13 template<typename _InputIterator, typename _ForwardIterator, typename _BinaryPredicate> _InputIterator
std::find_first_of ( _InputIterator __first1, _InputIterator __last1, _ForwardIterator __first2, _ForwardIterator __last2,
    _BinaryPredicate __comp )
```

Find element from a set in a sequence using a predicate.

Parameters

| | |
|-----------------------|----------------------------|
| <code>__first1</code> | Start of range to search. |
| <code>__last1</code> | End of range to search. |
| <code>__first2</code> | Start of match candidates. |
| <code>__last2</code> | End of match candidates. |
| <code>__comp</code> | Predicate to use. |

Returns

The first iterator `i` in the range `[__first1, __last1)` such that `comp(*i, *(i2))` is true and `i2` is an iterator in `[__first2, __last2)`, or `__last1` if no such iterator exists.

Searches the range `[__first1, __last1)` for an element that is equal to some element in the range `[__first2, __last2)`. If found, returns an iterator in the range `[__first1, __last1)`, otherwise returns `__last1`.

Definition at line 3866 of file `stl_algo.h`.

```
2.49.2.14 template<typename _InputIterator, typename _Predicate> _InputIterator std::find_if ( _InputIterator __first,
    _InputIterator __last, _Predicate __pred ) [inline]
```

Find the first element in a sequence for which a predicate is true.

Parameters

| | |
|----------------------|--------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__pred</code> | A predicate. |

Returns

The first iterator `i` in the range `[__first, __last)` such that `__pred(*i)` is true, or `__last` if no such iterator exists.

Definition at line 3794 of file `stl_algo.h`.

References `std::__find_if()`.

Referenced by `std::none_of()`.

```
2.49.2.15 template<typename _InputIterator, typename _Predicate> _InputIterator std::find_if_not ( _InputIterator __first,
    _InputIterator __last, _Predicate __pred ) [inline]
```

Find the first element in a sequence for which a predicate is false.

Parameters

| | |
|----------------------|--------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__pred</code> | A predicate. |

Returns

The first iterator `i` in the range `[__first, __last)` such that `__pred(*i)` is false, or `__last` if no such iterator exists.

Definition at line 558 of file `stl_algo.h`.

References `std::__find_if_not()`.

Referenced by `std::all_of()`, and `std::is_partitioned()`.

2.49.2.16 `template<typename _InputIterator, typename _Function> _Function std::for_each (_InputIterator __first, _InputIterator __last, _Function __f)`

Apply a function to every element of a sequence.

Parameters

| | |
|----------------------|--------------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__f</code> | A unary function object. |

Returns

`__f` (`std::move(__f)` in C++0x).

Applies the function object `__f` to each element in the range `[first, last)`. `__f` must not modify the order of the sequence. If `__f` has a return value it is ignored.

Definition at line 3749 of file `stl_algo.h`.

2.49.2.17 `template<typename _ForwardIterator1, typename _ForwardIterator2> bool std::is_permutation (_ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2) [inline]`

Checks whether a permutation of the second sequence is equal to the first sequence.

Parameters

| | |
|-----------------------|------------------------|
| <code>__first1</code> | Start of first range. |
| <code>__last1</code> | End of first range. |
| <code>__first2</code> | Start of second range. |

Returns

true if there exists a permutation of the elements in the range `[__first2, __first2 + (__last1 - __first1))`, beginning with `ForwardIterator2` begin, such that `equal(__first1, __last1, begin)` returns true; otherwise, returns false.

Definition at line 3526 of file `stl_algo.h`.

2.49.2.18 `template<typename _ForwardIterator1, typename _ForwardIterator2, typename _BinaryPredicate> bool std::is_permutation (_ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2, _BinaryPredicate __pred) [inline]`

Checks whether a permutation of the second sequence is equal to the first sequence.

Parameters

| | |
|-----------------------|------------------------|
| <code>__first1</code> | Start of first range. |
| <code>__last1</code> | End of first range. |
| <code>__first2</code> | Start of second range. |
| <code>__pred</code> | A binary predicate. |

Returns

true if there exists a permutation of the elements in the range `[__first2, __first2 + (__last1 - __first1))`, beginning with `ForwardIterator2` begin, such that `equal(__first1, __last1, __begin, __pred)` returns true; otherwise, returns false.

Definition at line 3558 of file `stl_algo.h`.

2.49.2.19 `template<typename _InputIterator1, typename _InputIterator2> pair<_InputIterator1, _InputIterator2> std::mismatch (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2) [inline]`

Finds the places in ranges which don't match.

Parameters

| | |
|-----------------------|--------------------|
| <code>__first1</code> | An input iterator. |
| <code>__last1</code> | An input iterator. |
| <code>__first2</code> | An input iterator. |

Returns

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using `==` and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1283 of file `stl_algobase.h`.

2.49.2.20 `template<typename _InputIterator1, typename _InputIterator2, typename _BinaryPredicate> pair<_InputIterator1, _InputIterator2> std::mismatch (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _BinaryPredicate __binary_pred) [inline]`

Finds the places in ranges which don't match.

Parameters

| | |
|----------------------------|--|
| <code>__first1</code> | An input iterator. |
| <code>__last1</code> | An input iterator. |
| <code>__first2</code> | An input iterator. |
| <code>__binary_pred</code> | A binary predicate functor . |

Returns

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using the `binary_pred` parameter, and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1317 of file `stl_algobase.h`.

2.49.2.21 `template<typename _InputIterator, typename _Predicate> bool std::none_of (_InputIterator __first, _InputIterator __last, _Predicate __pred) [inline]`

Checks that a predicate is false for all the elements of a sequence.

Parameters

| | |
|----------------------|--------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__pred</code> | A predicate. |

Returns

True if the check is true, false otherwise.

Returns true if `__pred` is false for each element in the range `[__first,__last)`, and false otherwise.

Definition at line 525 of file `stl_algo.h`.

References `std::find_if()`.

Referenced by `std::any_of()`, and `std::is_partitioned()`.

2.49.2.22 `template<typename _ForwardIterator1 , typename _ForwardIterator2 > _ForwardIterator1 std::search (_ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2, _ForwardIterator2 __last2) [inline]`

Search a sequence for a matching sub-sequence.

Parameters

| | |
|-----------------------|---------------------|
| <code>__first1</code> | A forward iterator. |
| <code>__last1</code> | A forward iterator. |
| <code>__first2</code> | A forward iterator. |
| <code>__last2</code> | A forward iterator. |

Returns

The first iterator `i` in the range `[__first1,__last1-(__last2-__first2))` such that `*(i+N) == *(__first2+N)` for each `N` in the range `[0,__last2-__first2)`, or `__last1` if no such iterator exists.

Searches the range `[__first1,__last1)` for a sub-sequence that compares equal value-by-value with the sequence given by `[__first2,__last2)` and returns an iterator to the first element of the sub-sequence, or `__last1` if the sub-sequence is not found.

Because the sub-sequence must lie completely within the range `[__first1,__last1)` it must start at a position less than `__last1-(__last2-__first2)` where `__last2-__first2` is the length of the sub-sequence.

This means that the returned iterator `i` will be in the range `[__first1,__last1-(__last2-__first2))`

Definition at line 4010 of file `stl_algo.h`.

2.49.2.23 `template<typename _ForwardIterator1 , typename _ForwardIterator2 , typename _BinaryPredicate > _ForwardIterator1 std::search (_ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2, _ForwardIterator2 __last2, _BinaryPredicate __predicate) [inline]`

Search a sequence for a matching sub-sequence using a predicate.

Parameters

| | |
|-----------------------|---------------------|
| <code>__first1</code> | A forward iterator. |
|-----------------------|---------------------|

| | |
|--------------------------|---------------------|
| <code>__last1</code> | A forward iterator. |
| <code>__first2</code> | A forward iterator. |
| <code>__last2</code> | A forward iterator. |
| <code>__predicate</code> | A binary predicate. |

Returns

The first iterator `i` in the range `[__first1, __last1 - (__last2 - __first2))` such that `__predicate(*(i+N), *(__first2+N))` is true for each `N` in the range `[0, __last2 - __first2)`, or `__last1` if no such iterator exists.

Searches the range `[__first1, __last1)` for a sub-sequence that compares equal value-by-value with the sequence given by `[__first2, __last2)`, using `__predicate` to determine equality, and returns an iterator to the first element of the sub-sequence, or `__last1` if no such iterator exists.

See Also

Definition at line 4050 of file `stl_algo.h`.

2.49.2.24 `template<typename _ForwardIterator, typename _Integer, typename _Tp> _ForwardIterator std::search_n (`
`_ForwardIterator __first, _ForwardIterator __last, _Integer __count, const _Tp & __val) [inline]`

Search a sequence for a number of consecutive values.

Parameters

| | |
|----------------------|-----------------------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__count</code> | The number of consecutive values. |
| <code>__val</code> | The value to find. |

Returns

The first iterator `i` in the range `[__first, __last - __count)` such that `*(i+N) == __val` for each `N` in the range `[0, __count)`, or `__last` if no such iterator exists.

Searches the range `[__first, __last)` for `count` consecutive elements equal to `__val`.

Definition at line 4084 of file `stl_algo.h`.

2.49.2.25 `template<typename _ForwardIterator, typename _Integer, typename _Tp, typename _BinaryPredicate> _ForwardIterator`
`std::search_n (_ForwardIterator __first, _ForwardIterator __last, _Integer __count, const _Tp & __val, _BinaryPredicate`
`__binary_pred) [inline]`

Search a sequence for a number of consecutive values using a predicate.

Parameters

| | |
|----------------------|-----------------------------------|
| <code>__first</code> | A forward iterator. |
| <code>__last</code> | A forward iterator. |
| <code>__count</code> | The number of consecutive values. |

| | |
|----------------------------|---------------------|
| <code>__val</code> | The value to find. |
| <code>__binary_pred</code> | A binary predicate. |

Returns

The first iterator `i` in the range `[__first, __last - __count)` such that `__binary_pred(*(i+N), __val)` is true for each `N` in the range `[0, __count)`, or `__last` if no such iterator exists.

Searches the range `[__first, __last)` for `__count` consecutive elements for which the predicate returns true.

Definition at line 4118 of file `stl_algo.h`.

2.50 Normal Distributions

Collaboration diagram for Normal Distributions:

Classes

- class `std::cauchy_distribution< _RealType >`

> & __x)`

2.50.1 Detailed Description

2.50.2 Function Documentation

- 2.50.2.1 `template<typename _RealType > bool std::operator!= (const std::normal_distribution< _RealType > & __d1, const
std::normal_distribution< _RealType > & __d2) [inline]`

Return true if two normal distributions are different.

Definition at line 2283 of file random.h.

- 2.50.2.2 `template<typename _RealType > bool std::operator!= (const std::lognormal_distribution< _RealType > & __d1,
const std::lognormal_distribution< _RealType > & __d2) [inline]`

Return true if two lognormal distributions are different.

Definition at line 2487 of file random.h.

- 2.50.2.3 `template<typename _RealType > bool std::operator!= (const std::gamma_distribution< _RealType > & __d1, const
std::gamma_distribution< _RealType > & __d2) [inline]`

Return true if two gamma distributions are different.

Definition at line 2707 of file random.h.

- 2.50.2.4 `template<typename _RealType > bool std::operator!= (const std::chi_squared_distribution< _RealType > & __d1,
const std::chi_squared_distribution< _RealType > & __d2) [inline]`

Return true if two Chi-squared distributions are different.

Definition at line 2917 of file random.h.

- 2.50.2.5 `template<typename _RealType > bool std::operator!= (const std::cauchy_distribution< _RealType > & __d1, const
std::cauchy_distribution< _RealType > & __d2) [inline]`

Return true if two Cauchy distributions have different parameters.

Definition at line 3084 of file random.h.

- 2.50.2.6 `template<typename _RealType > bool std::operator!= (const std::fisher_f_distribution< _RealType > & __d1,
const std::fisher_f_distribution< _RealType > & __d2) [inline]`

Return true if two Fisher f distributions are different.

Definition at line 3340 of file random.h.

- 2.50.2.7 `template<typename _RealType > bool std::operator!= (const std::student_t_distribution< _RealType > & __d1,
const std::student_t_distribution< _RealType > & __d2) [inline]`

Return true if two Student t distributions are different.

Definition at line 3553 of file random.h.

2.50.2.8 `template<typename _RealType, typename _CharT, typename _Traits> std::basic_ostream< _CharT, _Traits> & std::operator<< (std::basic_ostream< _CharT, _Traits> &__os, const std::cauchy_distribution< _RealType> &__x)`

Inserts a `cauchy_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

| | |
|-------------------|--|
| <code>__os</code> | An output stream. |
| <code>__x</code> | A <code>cauchy_distribution</code> random number distribution. |

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 2275 of file `bits/random.tcc`.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

2.50.2.9 `template<typename _RealType, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits> & std::operator>> (std::basic_istream<_CharT, _Traits> & __is, std::cauchy_distribution<_RealType> & __x)`

Extracts a `cauchy_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

| | |
|-------------------|--|
| <code>__is</code> | An input stream. |
| <code>__x</code> | A <code>cauchy_distribution</code> random number generator engine. |

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 2299 of file `bits/random.tcc`.

References `std::dec()`, `std::ios_base::flags()`, `std::cauchy_distribution<_RealType>::param()`, and `std::skipws()`.

2.51.1 Detailed Description

Classes and functions for representing and manipulating arrays of elements.

2.51.2 Function Documentation

2.51.2.1 `std::gslice::gslice ()` `[inline]`

Construct an empty slice.

Definition at line 149 of file `gslice.h`.

2.51.2.2 `std::gslice::gslice (size_t __o, const valarray< size_t > & __l, const valarray< size_t > & __s)` `[inline]`

Construct a slice.

Constructs a slice with as many dimensions as the length of the `l` and `s` arrays.

Parameters

| | |
|------------------|--|
| <code>__o</code> | Offset in array of first element. |
| <code>__l</code> | Array of dimension lengths. |
| <code>__s</code> | Array of dimension strides between array elements. |

Definition at line 153 of file `gslice.h`.

2.51.2.3 `std::gslice::gslice (const gslice & __g)` `[inline]`

Copy constructor.

Definition at line 158 of file `gslice.h`.

2.51.2.4 `template<typename _Tp > std::gslice_array< _Tp >::gslice_array (const gslice_array< _Tp > & __a)` `[inline]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 143 of file `gslice_array.h`.

2.51.2.5 `template<typename _Tp> std::indirect_array<_Tp>::indirect_array (const indirect_array<_Tp> &__a)`
`[inline]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 143 of file `indirect_array.h`.

2.51.2.6 `template<typename _Tp> std::mask_array<_Tp>::mask_array (const mask_array<_Tp> &a)` `[inline]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 139 of file `mask_array.h`.

2.51.2.7 `std::slice::slice ()` `[inline]`

Construct an empty slice.

Definition at line 90 of file `slice_array.h`.

2.51.2.8 `std::slice::slice (size_t __o, size_t __d, size_t __s)` `[inline]`

Construct a slice.

Parameters

| | |
|------------------|-----------------------------------|
| <code>__o</code> | Offset in array of first element. |
| <code>__d</code> | Number of elements in slice. |
| <code>__s</code> | Stride between array elements. |

Definition at line 94 of file `slice_array.h`.

2.51.2.9 `template<typename _Tp> std::slice_array<_Tp>::slice_array (const slice_array<_Tp> &a)` `[inline]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 207 of file `slice_array.h`.

2.51.2.10 `template<typename _Tp> std::valarray<_Tp>::valarray ()` `[inline]`

Construct an empty array.

Definition at line 605 of file `valarray`.

2.51.2.11 `template<typename _Tp> std::valarray<_Tp>::valarray (size_t __n)` `[inline]`, `[explicit]`

Construct an array with n elements.

Definition at line 609 of file `valarray`.

2.51.2.12 `template<typename _Tp> std::valarray<_Tp>::valarray (const _Tp &__t, size_t __n)` `[inline]`

Construct an array with n elements initialized to t .

Definition at line 615 of file `valarray`.

2.51.2.13 `template<typename _Tp> std::valarray<_Tp>::valarray (const valarray<_Tp> &__v)` `[inline]`

Copy constructor.

Definition at line 630 of file `valarray`.

2.51.2.14 `template<typename _Tp> std::valarray<_Tp>::valarray (valarray<_Tp> && __v) [inline],
[noexcept]`

Move constructor.

Definition at line 638 of file `valarray`.

2.51.2.15 `template<typename _Tp> std::valarray<_Tp>::valarray (const slice_array<_Tp> & __sa) [inline]`

Construct an array with the same size and values in *sa*.

Definition at line 648 of file `valarray`.

2.51.2.16 `template<typename _Tp> std::valarray<_Tp>::valarray (const gslice_array<_Tp> & __ga) [inline]`

Construct an array with the same size and values in *ga*.

Definition at line 657 of file `valarray`.

2.51.2.17 `template<typename _Tp> std::valarray<_Tp>::valarray (const mask_array<_Tp> & __ma) [inline]`

Construct an array with the same size and values in *ma*.

Definition at line 668 of file `valarray`.

2.51.2.18 `template<typename _Tp> std::valarray<_Tp>::valarray (const indirect_array<_Tp> & __ia) [inline]`

Construct an array with the same size and values in *ia*.

Definition at line 677 of file `valarray`.

2.51.2.19 `template<typename _Tp> std::valarray<_Tp>::valarray (initializer_list<_Tp> __l) [inline]`

Construct an array with an `initializer_list` of values.

Definition at line 687 of file `valarray`.

2.51.2.20 `std::gslice::~~gslice () [inline]`

Destructor.

Definition at line 163 of file `gslice.h`.

2.51.2.21 `template<class _Tp> _Expr<_ValFunClos<_ValArray, _Tp>, _Tp> std::valarray<_Tp>::apply (_Tp func, _Tp)
const [inline]`

Apply a function to the array.

Returns a new `valarray` with elements assigned to the result of applying *func* to the corresponding element of this array. The new array has the same size as this one.

Parameters

| | |
|-------------|---|
| <i>func</i> | Function of <i>Tp</i> returning <i>Tp</i> to apply. |
|-------------|---|

Returns

New `valarray` with transformed elements.

Definition at line 1049 of file `valarray`.

2.51.2.22 `template<class _Tp> _Expr< _RefFunClos< _ValArray, _Tp >, _Tp > std::valarray< _Tp >::apply (_Tp funcconst
_Tp &) const [inline]`

Apply a function to the array.

Returns a new valarray with elements assigned to the result of applying func to the corresponding element of this array. The new array has the same size as this one.

Parameters

| | |
|-------------|--|
| <i>func</i> | Function of const Tp& returning Tp to apply. |
|-------------|--|

Returns

New valarray with transformed elements.

Definition at line 1057 of file valarray.

2.51.2.23 `template<class _Tp > _Tp* std::begin (valarray< _Tp > &__va) [inline]`

Return an iterator pointing to the first element of the valarray.

Parameters

| | |
|-------------|-----------|
| <i>__va</i> | valarray. |
|-------------|-----------|

Definition at line 1196 of file valarray.

References std::__addressof().

2.51.2.24 `template<class _Tp > const _Tp* std::begin (const valarray< _Tp > &__va) [inline]`

Return an iterator pointing to the first element of the const valarray.

Parameters

| | |
|-------------|-----------|
| <i>__va</i> | valarray. |
|-------------|-----------|

Definition at line 1206 of file valarray.

References std::__addressof().

2.51.2.25 `template<class _Tp > valarray< _Tp > std::valarray< _Tp >::cshift (int __n) const [inline]`

Return a rotated array.

A new valarray is constructed as a copy of this array with elements in shifted positions. For an element with index i, the new position is (i - n) % size(). The new valarray has the same size as the current one. Elements that are shifted beyond the array bounds are shifted into the other end of the array. No elements are lost.

Positive arguments shift toward index 0, wrapping around the top. Negative arguments shift towards the top, wrapping around to 0.

Parameters

| | |
|------------|--|
| <i>__n</i> | Number of element positions to rotate. |
|------------|--|

Returns

New valarray with elements in shifted positions.

Definition at line 975 of file valarray.

2.51.2.26 `template<class _Tp> _Tp* std::end (valarray<_Tp> &__va) [inline]`

Return an iterator pointing to one past the last element of the valarray.

Parameters

| | |
|-------------------|------------------------|
| <code>__va</code> | <code>valarray.</code> |
|-------------------|------------------------|

Definition at line 1216 of file `valarray`.

References `std::__addressof()`, and `std::valarray<_Tp>::size()`.

2.51.2.27 `template<class _Tp> const _Tp* std::end (const valarray<_Tp> & __va) [inline]`

Return an iterator pointing to one past the last element of the `const valarray`.

Parameters

| | |
|-------------------|------------------------|
| <code>__va</code> | <code>valarray.</code> |
|-------------------|------------------------|

Definition at line 1226 of file `valarray`.

References `std::__addressof()`, and `std::valarray<_Tp>::size()`.

2.51.2.28 `template<typename _Tp> _Tp std::valarray<_Tp>::max () const [inline]`

Return the maximum element using `operator<()`.

Definition at line 1041 of file `valarray`.

References `std::max_element()`.

2.51.2.29 `template<typename _Tp> _Tp std::valarray<_Tp>::min () const [inline]`

Return the minimum element using `operator<()`.

Definition at line 1033 of file `valarray`.

References `std::min_element()`.

2.51.2.30 `template<typename _Tp> valarray<_Tp>::template _UnaryOp< __logical_not >::Rt std::valarray<_Tp>::operator! () const [inline]`

Return a new `valarray` by applying unary `!` to each element.

Definition at line 1076 of file `valarray`.

2.51.2.31 `template<typename _Tp> void std::gslice_array<_Tp>::operator%=(const valarray<_Tp> & __v) const [inline]`

Modulo slice elements by corresponding elements of `v`.

Definition at line 202 of file `gslice_array.h`.

2.51.2.32 `template<typename _Tp> void std::mask_array<_Tp>::operator%=(const valarray<_Tp> & __v) const [inline]`

Modulo slice elements by corresponding elements of `v`.

Definition at line 192 of file `mask_array.h`.

2.51.2.33 `template<typename _Tp> void std::indirect_array<_Tp>::operator%=(const valarray<_Tp> & __v) const [inline]`

Modulo slice elements by corresponding elements of `v`.

Definition at line 196 of file `indirect_array.h`.

2.51.2.34 `template<typename _Tp> void std::slice_array<_Tp>::operator%=(const valarray<_Tp> &__v) const`
`[inline]`

Modulo slice elements by corresponding elements of *v*.

Definition at line 258 of file `slice_array.h`.

2.51.2.35 `template<class _Tp> valarray<_Tp> &std::valarray<_Tp>::operator%=(const _Tp &__t)` `[inline]`

Set each element *e* of array to *e % t*.

Definition at line 1103 of file `valarray`.

2.51.2.36 `template<class _Tp> valarray<_Tp> &std::valarray<_Tp>::operator%=(const valarray<_Tp> &__v)`
`[inline]`

Modulo elements of array by corresponding elements of *v*.

Definition at line 1103 of file `valarray`.

2.51.2.37 `template<typename _Tp> void std::gslice_array<_Tp>::operator&=(const valarray<_Tp> &__v) const`
`[inline]`

Logical and slice elements with corresponding elements of *v*.

Definition at line 206 of file `gslice_array.h`.

2.51.2.38 `template<typename _Tp> void std::mask_array<_Tp>::operator&=(const valarray<_Tp> &__v) const`
`[inline]`

Logical and slice elements with corresponding elements of *v*.

Definition at line 196 of file `mask_array.h`.

2.51.2.39 `template<typename _Tp> void std::indirect_array<_Tp>::operator&=(const valarray<_Tp> &__v) const`
`[inline]`

Logical and slice elements with corresponding elements of *v*.

Definition at line 200 of file `indirect_array.h`.

2.51.2.40 `template<typename _Tp> void std::slice_array<_Tp>::operator&=(const valarray<_Tp> &__v) const`
`[inline]`

Logical and slice elements with corresponding elements of *v*.

Definition at line 262 of file `slice_array.h`.

2.51.2.41 `template<class _Tp> valarray<_Tp> &std::valarray<_Tp>::operator&=(const _Tp &__t)` `[inline]`

Set each element *e* of array to *e & t*.

Definition at line 1105 of file `valarray`.

2.51.2.42 `template<class _Tp> valarray<_Tp> &std::valarray<_Tp>::operator&=(const valarray<_Tp> &__v)`
`[inline]`

Logical and corresponding elements of *v* with elements of array.

Definition at line 1105 of file `valarray`.

2.51.2.43 `template<typename _Tp> void std::gslice_array<_Tp>::operator*=(const valarray<_Tp> &__v) const`
`[inline]`

Multiply slice elements by corresponding elements of *v*.

Definition at line 200 of file `gslice_array.h`.

2.51.2.44 `template<typename _Tp> void std::mask_array<_Tp>::operator*=(const valarray<_Tp> &__v) const`
`[inline]`

Multiply slice elements by corresponding elements of *v*.

Definition at line 190 of file `mask_array.h`.

2.51.2.45 `template<typename _Tp> void std::indirect_array<_Tp>::operator*=(const valarray<_Tp> &__v) const`
`[inline]`

Multiply slice elements by corresponding elements of *v*.

Definition at line 194 of file `indirect_array.h`.

2.51.2.46 `template<typename _Tp> void std::slice_array<_Tp>::operator*=(const valarray<_Tp> &__v) const`
`[inline]`

Multiply slice elements by corresponding elements of *v*.

Definition at line 256 of file `slice_array.h`.

2.51.2.47 `template<class _Tp> valarray<_Tp> &std::valarray<_Tp>::operator*=(const _Tp &__t)` `[inline]`

Multiply each element of array by *t*.

Definition at line 1101 of file `valarray`.

2.51.2.48 `template<class _Tp> valarray<_Tp> &std::valarray<_Tp>::operator*=(const valarray<_Tp> &__v)`
`[inline]`

Multiply elements of array by corresponding elements of *v*.

Definition at line 1101 of file `valarray`.

2.51.2.49 `template<typename _Tp> valarray<_Tp>::template _UnaryOp<__unary_plus>::_Rt std::valarray<_Tp>`
`>::operator+() const` `[inline]`

Return a new valarray by applying unary + to each element.

Definition at line 1073 of file `valarray`.

2.51.2.50 `template<typename _Tp> void std::gslice_array<_Tp>::operator+=(const valarray<_Tp> &__v) const`
`[inline]`

Add corresponding elements of *v* to slice elements.

Definition at line 203 of file `gslice_array.h`.

2.51.2.51 `template<typename _Tp> void std::mask_array<_Tp>::operator+=(const valarray<_Tp> &__v) const`
`[inline]`

Add corresponding elements of *v* to slice elements.

Definition at line 193 of file `mask_array.h`.

2.51.2.52 `template<typename _Tp> void std::indirect_array<_Tp>::operator+=(const valarray<_Tp> &__v) const`
`[inline]`

Add corresponding elements of *v* to slice elements.

Definition at line 197 of file `indirect_array.h`.

2.51.2.53 `template<typename _Tp> void std::slice_array<_Tp>::operator+=(const valarray<_Tp> &__v) const`
`[inline]`

Add corresponding elements of *v* to slice elements.

Definition at line 259 of file `slice_array.h`.

2.51.2.54 `template<class _Tp> valarray<_Tp> &std::valarray<_Tp>::operator+=(const _Tp &__t) [inline]`

Add *t* to each element of array.

Definition at line 1099 of file `valarray`.

2.51.2.55 `template<class _Tp> valarray<_Tp> &std::valarray<_Tp>::operator+=(const valarray<_Tp> &__v)`
`[inline]`

Add corresponding elements of *v* to elements of array.

Definition at line 1099 of file `valarray`.

2.51.2.56 `template<typename _Tp> valarray<_Tp>::template _UnaryOp<__negate>::_Rt std::valarray<_Tp>::operator-(`
`) const [inline]`

Return a new valarray by applying unary - to each element.

Definition at line 1074 of file `valarray`.

2.51.2.57 `template<typename _Tp> void std::gslice_array<_Tp>::operator-= (const valarray<_Tp> &__v) const`
`[inline]`

Subtract corresponding elements of *v* from slice elements.

Definition at line 204 of file `gslice_array.h`.

2.51.2.58 `template<typename _Tp> void std::mask_array<_Tp>::operator-= (const valarray<_Tp> &__v) const`
`[inline]`

Subtract corresponding elements of *v* from slice elements.

Definition at line 194 of file `mask_array.h`.

2.51.2.59 `template<typename _Tp> void std::indirect_array<_Tp>::operator-= (const valarray<_Tp> &__v) const`
`[inline]`

Subtract corresponding elements of *v* from slice elements.

Definition at line 198 of file `indirect_array.h`.

2.51.2.60 `template<typename _Tp> void std::slice_array<_Tp>::operator-= (const valarray<_Tp> &__v) const`
`[inline]`

Subtract corresponding elements of *v* from slice elements.

Definition at line 260 of file `slice_array.h`.

2.51.2.61 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator-= (const _Tp & __t) [inline]`

Subtract *t* to each element of array.

Definition at line 1100 of file valarray.

2.51.2.62 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator-= (const valarray<_Tp> & __v) [inline]`

Subtract corresponding elements of *v* from elements of array.

Definition at line 1100 of file valarray.

2.51.2.63 `template<typename _Tp> void std::gslice_array<_Tp>::operator/= (const valarray<_Tp> & __v) const [inline]`

Divide slice elements by corresponding elements of *v*.

Definition at line 201 of file gslice_array.h.

2.51.2.64 `template<typename _Tp> void std::mask_array<_Tp>::operator/= (const valarray<_Tp> & __v) const [inline]`

Divide slice elements by corresponding elements of *v*.

Definition at line 191 of file mask_array.h.

2.51.2.65 `template<typename _Tp> void std::indirect_array<_Tp>::operator/= (const valarray<_Tp> & __v) const [inline]`

Divide slice elements by corresponding elements of *v*.

Definition at line 195 of file indirect_array.h.

2.51.2.66 `template<typename _Tp> void std::slice_array<_Tp>::operator/= (const valarray<_Tp> & __v) const [inline]`

Divide slice elements by corresponding elements of *v*.

Definition at line 257 of file slice_array.h.

2.51.2.67 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator/= (const _Tp & __t) [inline]`

Divide each element of array by *t*.

Definition at line 1102 of file valarray.

2.51.2.68 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator/= (const valarray<_Tp> & __v) [inline]`

Divide elements of array by corresponding elements of *v*.

Definition at line 1102 of file valarray.

2.51.2.69 `template<typename _Tp> void std::gslice_array<_Tp>::operator<<= (const valarray<_Tp> & __v) const [inline]`

Left shift slice elements by corresponding elements of *v*.

Definition at line 208 of file gslice_array.h.

2.51.2.70 `template<typename _Tp> void std::mask_array<_Tp>::operator<<= (const valarray<_Tp> &__v) const [inline]`

Left shift slice elements by corresponding elements of *v*.

Definition at line 198 of file mask_array.h.

2.51.2.71 `template<typename _Tp> void std::indirect_array<_Tp>::operator<<= (const valarray<_Tp> &__v) const [inline]`

Left shift slice elements by corresponding elements of *v*.

Definition at line 202 of file indirect_array.h.

2.51.2.72 `template<typename _Tp> void std::slice_array<_Tp>::operator<<= (const valarray<_Tp> &__v) const [inline]`

Left shift slice elements by corresponding elements of *v*.

Definition at line 264 of file slice_array.h.

2.51.2.73 `template<class _Tp> valarray<_Tp> &std::valarray<_Tp>::operator<<= (const _Tp &__t) [inline]`

Left shift each element *e* of array by *t* bits.

Definition at line 1107 of file valarray.

2.51.2.74 `template<class _Tp> valarray<_Tp> &std::valarray<_Tp>::operator<<= (const valarray<_Tp> &__v) [inline]`

Left shift elements of array by corresponding elements of *v*.

Definition at line 1107 of file valarray.

2.51.2.75 `template<typename _Tp> gslice_array<_Tp> &std::gslice_array<_Tp>::operator= (const gslice_array<_Tp> &__a) [inline]`

Assignment operator. Assigns slice elements to corresponding elements of *a*.

Definition at line 148 of file gslice_array.h.

2.51.2.76 `template<typename _Tp> indirect_array<_Tp> &std::indirect_array<_Tp>::operator= (const indirect_array<_Tp> &__a) [inline]`

Assignment operator. Assigns elements to corresponding elements of *a*.

Definition at line 154 of file indirect_array.h.

2.51.2.77 `template<typename _Tp> mask_array<_Tp> &std::mask_array<_Tp>::operator= (const mask_array<_Tp> &__a) [inline]`

Assignment operator. Assigns elements to corresponding elements of *a*.

Definition at line 149 of file mask_array.h.

2.51.2.78 `template<typename _Tp> void std::gslice_array<_Tp>::operator= (const valarray<_Tp> &__v) const [inline]`

Assign slice elements to corresponding elements of *v*.

Definition at line 166 of file gslice_array.h.

References `std::valarray<_Tp>::size()`.

2.51.2.79 `template<typename _Tp> void std::indirect_array<_Tp>::operator=(const valarray<_Tp> &__v) const`
`[inline]`

Assign slice elements to corresponding elements of *v*.

Definition at line 168 of file `indirect_array.h`.

2.51.2.80 `gslice & std::gslice::operator=(const gslice &__g)` `[inline]`

Assignment operator.

Definition at line 170 of file `gslice.h`.

2.51.2.81 `template<typename _Tp> void std::gslice_array<_Tp>::operator=(const _Tp &__t) const` `[inline]`

Assign all slice elements to *t*.

Definition at line 158 of file `gslice_array.h`.

2.51.2.82 `template<typename _Tp> void std::mask_array<_Tp>::operator=(const _Tp &__t) const` `[inline]`

Assign all slice elements to *t*.

Definition at line 158 of file `mask_array.h`.

2.51.2.83 `template<typename _Tp> void std::indirect_array<_Tp>::operator=(const _Tp &__t) const` `[inline]`

Assign all slice elements to *t*.

Definition at line 163 of file `indirect_array.h`.

2.51.2.84 `template<typename _Tp> slice_array<_Tp> & std::slice_array<_Tp>::operator=(const slice_array<_Tp> &__a)` `[inline]`

Assignment operator. Assigns slice elements to corresponding elements of *a*.

Definition at line 215 of file `slice_array.h`.

2.51.2.85 `template<typename _Tp> void std::slice_array<_Tp>::operator=(const valarray<_Tp> &__v) const`
`[inline]`

Assign slice elements to corresponding elements of *v*.

Definition at line 229 of file `slice_array.h`.

2.51.2.86 `template<typename _Tp> void std::slice_array<_Tp>::operator=(const _Tp &__t) const` `[inline]`

Assign all slice elements to *t*.

Definition at line 224 of file `slice_array.h`.

2.51.2.87 `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator=(const valarray<_Tp> &__v)`
`[inline]`

Assign elements to an array.

Assign elements of array to values in *v*.

Parameters

| | |
|------------------|------------------------------|
| <code>__v</code> | Valarray to get values from. |
|------------------|------------------------------|

Definition at line 708 of file `valarray`.

2.51.2.88 `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator= (valarray<_Tp> && __v)`
`[inline], [noexcept]`

Move assign elements to an array.

Move assign elements of array to values in `v`.

Parameters

| | |
|------------------|------------------------------|
| <code>__v</code> | Valarray to get values from. |
|------------------|------------------------------|

Definition at line 732 of file `valarray`.

2.51.2.89 `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator= (const _Tp & __t)` `[inline]`

Assign elements to a value.

Assign all elements of array to `t`.

Parameters

| | |
|------------------|---------------------|
| <code>__t</code> | Value for elements. |
|------------------|---------------------|

Definition at line 772 of file `valarray`.

2.51.2.90 `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator= (const slice_array<_Tp> & __sa`
`)` `[inline]`

Assign elements to an array subset.

Assign elements of array to values in `sa`. Results are undefined if `sa` does not have the same size as this array.

Parameters

| | |
|-------------------|---------------------------------|
| <code>__sa</code> | Array slice to get values from. |
|-------------------|---------------------------------|

Definition at line 780 of file `valarray`.

2.51.2.91 `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator= (const gslice_array<_Tp> &`
`__ga)` `[inline]`

Assign elements to an array subset.

Assign elements of array to values in `ga`. Results are undefined if `ga` does not have the same size as this array.

Parameters

| | |
|-------------------|---------------------------------|
| <code>__ga</code> | Array slice to get values from. |
|-------------------|---------------------------------|

Definition at line 790 of file `valarray`.

References `std::valarray<_Tp>::size()`.

2.51.2.92 `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator= (const mask_array<_Tp> &`
`__ma)` `[inline]`

Assign elements to an array subset.

Assign elements of array to values in *ma*. Results are undefined if *ma* does not have the same size as this array.

Parameters

| | |
|-------------------|---------------------------------|
| <code>__ma</code> | Array slice to get values from. |
|-------------------|---------------------------------|

Definition at line 800 of file valarray.

2.51.2.93 `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator= (const indirect_array<_Tp> & __ia) [inline]`

Assign elements to an array subset.

Assign elements of array to values in *ia*. Results are undefined if *ia* does not have the same size as this array.

Parameters

| | |
|-------------------|---------------------------------|
| <code>__ia</code> | Array slice to get values from. |
|-------------------|---------------------------------|

Definition at line 810 of file valarray.

2.51.2.94 `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator= (initializer_list<_Tp> __l) [inline]`

Assign elements to an initializer_list.

Assign elements of array to values in `__l`. Results are undefined if `__l` does not have the same size as this array.

Parameters

| | |
|------------------|--------------------------------------|
| <code>__l</code> | initializer_list to get values from. |
|------------------|--------------------------------------|

Definition at line 748 of file valarray.

2.51.2.95 `template<typename _Tp> void std::gslice_array<_Tp>::operator>=> (const valarray<_Tp> & __v) const [inline]`

Right shift slice elements by corresponding elements of *v*.

Definition at line 209 of file gslice_array.h.

2.51.2.96 `template<typename _Tp> void std::mask_array<_Tp>::operator>=> (const valarray<_Tp> & __v) const [inline]`

Right shift slice elements by corresponding elements of *v*.

Definition at line 199 of file mask_array.h.

2.51.2.97 `template<typename _Tp> void std::indirect_array<_Tp>::operator>=> (const valarray<_Tp> & __v) const [inline]`

Right shift slice elements by corresponding elements of *v*.

Definition at line 203 of file indirect_array.h.

2.51.2.98 `template<typename _Tp> void std::slice_array<_Tp>::operator>=> (const valarray<_Tp> & __v) const [inline]`

Right shift slice elements by corresponding elements of *v*.

Definition at line 265 of file slice_array.h.

2.51.2.99 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator>>= (const _Tp & __t) [inline]`

Right shift each element *e* of array by *t* bits.

Definition at line 1108 of file valarray.

2.51.2.100 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator>>= (const valarray<_Tp> & __v) [inline]`

Right shift elements of array by corresponding elements of *v*.

Definition at line 1108 of file valarray.

2.51.2.101 `template<typename _Tp> _Tp & std::valarray<_Tp>::operator[] (size_t __i) [inline]`

Return a reference to the *i*'th array element.

Parameters

| | |
|------------------|-----------------------------|
| <code>__i</code> | Index of element to return. |
|------------------|-----------------------------|

Returns

Reference to the *i*'th element.

Definition at line 576 of file valarray.

2.51.2.102 `template<typename _Tp> _Expr<_SClos<_ValArray, _Tp>, _Tp> std::valarray<_Tp>::operator[] (slice __s) const [inline]`

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the slice argument. The new valarray has the same size as the input slice.

See Also

slice.

Parameters

| | |
|------------------|-------------------|
| <code>__s</code> | The source slice. |
|------------------|-------------------|

Returns

New valarray containing elements in `__s`.

Definition at line 842 of file valarray.

2.51.2.103 `template<typename _Tp> slice_array<_Tp> std::valarray<_Tp>::operator[] (slice __s) [inline]`

Return a reference to an array subset.

Returns a new valarray containing the elements of the array indicated by the slice argument. The new valarray has the same size as the input slice.

See Also

slice.

Parameters

| | |
|------------------|-------------------|
| <code>__s</code> | The source slice. |
|------------------|-------------------|

Returns

New valarray containing elements in `__s`.

Definition at line 850 of file valarray.

```
2.51.2.104 template<typename _Tp > _Expr< _GClos< _ValArray, _Tp >, _Tp > std::valarray< _Tp >::operator[] ( const
        gslice & __s ) const    [inline]
```

Return an array subset.

Returns a `slice_array` referencing the elements of the array indicated by the slice argument.

See Also

`gslice`.

Parameters

| | |
|------------------|-------------------|
| <code>__s</code> | The source slice. |
|------------------|-------------------|

Returns

`Slice_array` referencing elements indicated by `__s`.

Definition at line 855 of file valarray.

```
2.51.2.105 template<typename _Tp > gslice_array< _Tp > std::valarray< _Tp >::operator[] ( const gslice & __s )
        [inline]
```

Return a reference to an array subset.

Returns a new valarray containing the elements of the array indicated by the `gslice` argument. The new valarray has the same size as the input `gslice`.

See Also

`gslice`.

Parameters

| | |
|------------------|----------------------------------|
| <code>__s</code> | The source <code>gslice</code> . |
|------------------|----------------------------------|

Returns

New valarray containing elements in `__s`.

Definition at line 864 of file valarray.

```
2.51.2.106 template<typename _Tp > valarray< _Tp > std::valarray< _Tp >::operator[] ( const valarray< bool > & __m )
        const    [inline]
```

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the argument. The input is a valarray of `bool` which represents a bitmask indicating which elements should be copied into the new valarray. Each element of the array is added to the return valarray if the corresponding element of the argument is true.

Parameters

| | |
|------------------|-----------------------|
| <code>__m</code> | The valarray bitmask. |
|------------------|-----------------------|

Returns

New valarray containing elements indicated by `__m`.

Definition at line 872 of file valarray.

References `std::valarray<_Tp>::size()`.

2.51.2.107 `template<typename _Tp> mask_array<_Tp> std::valarray<_Tp>::operator[] (const valarray< bool > & __m) [inline]`

Return a reference to an array subset.

Returns a new `mask_array` referencing the elements of the array indicated by the argument. The input is a valarray of `bool` which represents a bitmask indicating which elements are part of the subset. Elements of the array are part of the subset if the corresponding element of the argument is true.

Parameters

| | |
|------------------|-----------------------|
| <code>__m</code> | The valarray bitmask. |
|------------------|-----------------------|

Returns

New valarray containing elements indicated by `__m`.

Definition at line 884 of file valarray.

References `std::valarray<_Tp>::size()`.

2.51.2.108 `template<typename _Tp> _Expr<_IClos<_ValArray, _Tp>, _Tp> std::valarray<_Tp>::operator[] (const valarray< size_t > & __i) const [inline]`

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the argument. The elements in the argument are interpreted as the indices of elements of this valarray to copy to the return valarray.

Parameters

| | |
|------------------|----------------------------------|
| <code>__i</code> | The valarray element index list. |
|------------------|----------------------------------|

Returns

New valarray containing elements in `__s`.

Definition at line 895 of file valarray.

2.51.2.109 `template<typename _Tp> indirect_array<_Tp> std::valarray<_Tp>::operator[] (const valarray< size_t > & __i) [inline]`

Return a reference to an array subset.

Returns an `indirect_array` referencing the elements of the array indicated by the argument. The elements in the argument are interpreted as the indices of elements of this valarray to include in the subset. The returned `indirect_array` refers to these elements.

Parameters

| | |
|------------------|----------------------------------|
| <code>__i</code> | The valarray element index list. |
|------------------|----------------------------------|

Returns

Indirect_array referencing elements in `__i`.

Definition at line 903 of file valarray.

References `std::valarray<_Tp>::size()`.

2.51.2.110 `template<typename _Tp> void std::gslice_array<_Tp>::operator^= (const valarray<_Tp> &__v) const`
`[inline]`

Logical xor slice elements with corresponding elements of `v`.

Definition at line 205 of file gslice_array.h.

2.51.2.111 `template<typename _Tp> void std::mask_array<_Tp>::operator^= (const valarray<_Tp> &__v) const`
`[inline]`

Logical xor slice elements with corresponding elements of `v`.

Definition at line 195 of file mask_array.h.

2.51.2.112 `template<typename _Tp> void std::indirect_array<_Tp>::operator^= (const valarray<_Tp> &__v) const`
`[inline]`

Logical xor slice elements with corresponding elements of `v`.

Definition at line 199 of file indirect_array.h.

2.51.2.113 `template<typename _Tp> void std::slice_array<_Tp>::operator^= (const valarray<_Tp> &__v) const`
`[inline]`

Logical xor slice elements with corresponding elements of `v`.

Definition at line 261 of file slice_array.h.

2.51.2.114 `template<class _Tp> valarray<_Tp> &std::valarray<_Tp>::operator^= (const _Tp &__t)` `[inline]`

Set each element `e` of array to $e \wedge t$.

Definition at line 1104 of file valarray.

2.51.2.115 `template<class _Tp> valarray<_Tp> &std::valarray<_Tp>::operator^= (const valarray<_Tp> &__v)`
`[inline]`

Logical xor corresponding elements of `v` with elements of array.

Definition at line 1104 of file valarray.

2.51.2.116 `template<typename _Tp> void std::gslice_array<_Tp>::operator|= (const valarray<_Tp> &__v) const`
`[inline]`

Logical or slice elements with corresponding elements of `v`.

Definition at line 207 of file gslice_array.h.

2.51.2.117 `template<typename _Tp> void std::mask_array<_Tp>::operator|=(const valarray<_Tp> &__v) const`
`[inline]`

Logical or slice elements with corresponding elements of *v*.

Definition at line 197 of file `mask_array.h`.

2.51.2.118 `template<typename _Tp> void std::indirect_array<_Tp>::operator|=(const valarray<_Tp> &__v) const`
`[inline]`

Logical or slice elements with corresponding elements of *v*.

Definition at line 201 of file `indirect_array.h`.

2.51.2.119 `template<typename _Tp> void std::slice_array<_Tp>::operator|=(const valarray<_Tp> &__v) const`
`[inline]`

Logical or slice elements with corresponding elements of *v*.

Definition at line 263 of file `slice_array.h`.

2.51.2.120 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator|=(const _Tp &__t) [inline]`

Set each element *e* of array to *e* | *t*.

Definition at line 1106 of file `valarray`.

2.51.2.121 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator|=(const valarray<_Tp> &__v)`
`[inline]`

Logical or corresponding elements of *v* with elements of array.

Definition at line 1106 of file `valarray`.

2.51.2.122 `template<typename _Tp> valarray<_Tp>::template _UnaryOp<__bitwise_not>::Rt std::valarray<_Tp>`
`>::operator~() const [inline]`

Return a new valarray by applying unary *~* to each element.

Definition at line 1075 of file `valarray`.

2.51.2.123 `template<class _Tp> void std::valarray<_Tp>::resize(size_t __size, _Tp __c = _Tp()) [inline]`

Resize array.

Resize this array to *size* and set all elements to *c*. All references and iterators are invalidated.

Parameters

| | |
|---------------------|-----------------------------|
| <code>__size</code> | New array size. |
| <code>__c</code> | New value for all elements. |

Definition at line 1016 of file `valarray`.

2.51.2.124 `template<class _Tp> valarray<_Tp> std::valarray<_Tp>::shift(int __n) const [inline]`

Return a shifted array.

A new valarray is constructed as a copy of this array with elements in shifted positions. For an element with index *i*, the new position is *i* - *n*. The new valarray has the same size as the current one. New elements without a value are set to 0. Elements whose new position is outside the bounds of the array are discarded.

Positive arguments shift toward index 0, discarding elements [0, n). Negative arguments discard elements from the top of the array.

Parameters

| | |
|------------------|---------------------------------------|
| <code>__n</code> | Number of element positions to shift. |
|------------------|---------------------------------------|

Returns

New valarray with elements in shifted positions.

Definition at line 934 of file valarray.

2.51.2.125 `size_t std::slice::size () const [inline]`

Return size of slice.

Definition at line 102 of file slice_array.h.

2.51.2.126 `valarray< size_t > std::gslice::size () const [inline]`

Return array of sizes of slice dimensions.

Definition at line 139 of file gslice.h.

2.51.2.127 `template<class _Tp> size_t std::valarray<_Tp>::size () const [inline]`

Return the number of elements in array.

Definition at line 921 of file valarray.

Referenced by `std::end()`, `std::gslice_array<_Tp>::operator=()`, `std::valarray<_Tp>::operator=()`, and `std::valarray<_Tp>::operator[]()`.

2.51.2.128 `size_t std::slice::start () const [inline]`

Return array offset of first slice element.

Definition at line 98 of file slice_array.h.

2.51.2.129 `size_t std::gslice::start () const [inline]`

Return array offset of first slice element.

Definition at line 135 of file gslice.h.

2.51.2.130 `size_t std::slice::stride () const [inline]`

Return array stride of slice.

Definition at line 106 of file slice_array.h.

2.51.2.131 `valarray< size_t > std::gslice::stride () const [inline]`

Return array of array strides for each dimension.

Definition at line 143 of file gslice.h.

2.51.2.132 `template<class _Tp> _Tp std::valarray<_Tp>::sum () const [inline]`

Return the sum of all elements in the array.

Accumulates the sum of all elements into a `Tp` using `+=`. The order of adding the elements is unspecified.

Definition at line 926 of file `valarray`.

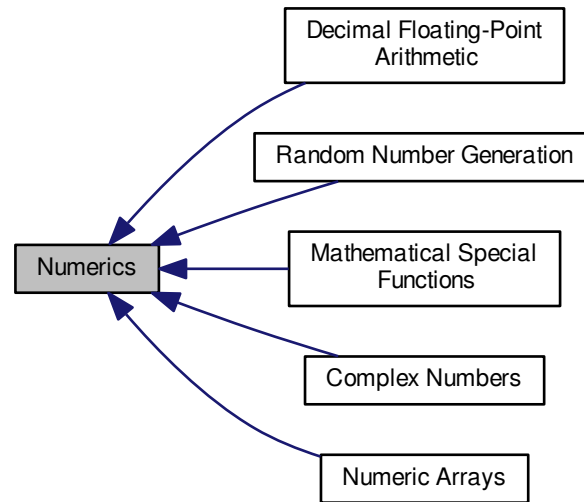

2.51.2.133 `template<class _Tp> void std::valarray<_Tp>::swap (valarray<_Tp> &__v) [inline],
[noexcept]`

Swap.

Definition at line 912 of file `valarray`.

2.52 Numerics

Collaboration diagram for Numerics:

Modules

- [Complex Numbers](#)
- [Decimal Floating-Point Arithmetic](#)
- [Mathematical Special Functions](#)
- [Numeric Arrays](#)
- [Random Number Generation](#)

2.52.1 Detailed Description

Components for performing numeric operations. Includes support for complex number types, random number generation, numeric (n-at-a-time) arrays, generalized numeric algorithms, and special math functions.

2.53 Pointer Abstractions

Collaboration diagram for Pointer Abstractions:

`void std::swap (weak_ptr< _Tp > &__a, weak_ptr< _Tp > &__b) noexcept`
- `template<typename _Tp, typename _Dp >`
`void std::swap (unique_ptr< _Tp, _Dp > &__x, unique_ptr< _Tp, _Dp > &__y) noexcept`

2.53.1 Detailed Description

Smart pointers, etc.

2.53.2 Function Documentation

2.53.2.1 `template<typename _Tp, typename _Alloc, typename... _Args> shared_ptr<_Tp> std::allocate_shared (const _Alloc & __a, _Args &&... __args) [inline]`

Create an object that is owned by a `shared_ptr`.

Parameters

| | |
|---------------------|--|
| <code>__a</code> | An allocator. |
| <code>__args</code> | Arguments for the <code>_Tp</code> object's constructor. |

Returns

A `shared_ptr` that owns the newly created object.

Exceptions

| | |
|-----------|---|
| <i>An</i> | exception thrown from <code>_Alloc::allocate</code> or from the constructor of <code>_Tp</code> . |
|-----------|---|

A copy of `__a` will be used to allocate memory for the `shared_ptr` and the new object.

Definition at line 585 of file `shared_ptr.h`.

2.53.2.2 `template<typename _Del, typename _Tp, _Lock_policy _Lp> _Del* std::get_deleter (const __shared_ptr<_Tp, _Lp> & __p) [inline], [noexcept]`

20.7.2.2.10 `shared_ptr` `get_deleter`

Definition at line 76 of file `shared_ptr.h`.

2.53.2.3 `template<typename _Tp, typename... _Args> shared_ptr<_Tp> std::make_shared (_Args &&... __args) [inline]`

Create an object that is owned by a `shared_ptr`.

Parameters

| | |
|---------------------|--|
| <code>__args</code> | Arguments for the <code>_Tp</code> object's constructor. |
|---------------------|--|

Returns

A `shared_ptr` that owns the newly created object.

Exceptions

| | |
|----------------------------------|--|
| <code>std::bad_alloc</code> , or | an exception thrown from the constructor of <code>_Tp</code> . |
|----------------------------------|--|

Definition at line 600 of file `shared_ptr.h`.

2.53.2.4 `template<typename _Ch, typename _Tr, typename _Tp, _Lock_policy _Lp> std::basic_ostream<_Ch, _Tr>& std::operator<< (std::basic_ostream<_Ch, _Tr> &__os, const shared_ptr<_Tp, _Lp> &__p) [inline]`

20.7.2.2.11 `shared_ptr` I/O

Definition at line 66 of file `shared_ptr.h`.

2.54 Poisson Distributions

Collaboration diagram for Poisson Distributions:

Classes

- class `std::discrete_distribution< _IntType >`

2.54.1 Detailed Description

2.54.2 Function Documentation

2.54.2.1 `template<typename _IntType> bool std::operator!=(const std::poisson_distribution< _IntType > &__d1, const std::poisson_distribution< _IntType > &__d2) [inline]`

Return true if two Poisson distributions are different.

Definition at line 4625 of file random.h.

2.54.2.2 `template<typename _RealType> bool std::operator!=(const std::exponential_distribution< _RealType > &__d1, const std::exponential_distribution< _RealType > &__d2) [inline]`

Return true if two exponential distributions have different parameters.

Definition at line 4803 of file random.h.

2.54.2.3 `template<typename _RealType> bool std::operator!=(const std::weibull_distribution< _RealType > &__d1, const std::weibull_distribution< _RealType > &__d2) [inline]`

Return true if two Weibull distributions have different parameters.

Definition at line 5006 of file random.h.

2.54.2.4 `template<typename _RealType> bool std::operator!=(const std::extreme_value_distribution< _RealType > &__d1, const std::extreme_value_distribution< _RealType > &__d2) [inline]`

Return true if two extreme value distributions have different parameters.

Definition at line 5209 of file random.h.

2.54.2.5 `template<typename _IntType> bool std::operator!=(const std::discrete_distribution< _IntType > &__d1, const std::discrete_distribution< _IntType > &__d2) [inline]`

Return true if two discrete distributions have different parameters.

Definition at line 5469 of file random.h.

2.54.2.6 `template<typename _RealType > bool std::operator!=(const std::piecewise_constant_distribution< _RealType > & __d1, const std::piecewise_constant_distribution< _RealType > & __d2) [inline]`

Return true if two piecewise constant distributions have different parameters.

Definition at line 5736 of file random.h.

2.54.2.7 `template<typename _RealType > bool std::operator!=(const std::piecewise_linear_distribution< _RealType > & __d1, const std::piecewise_linear_distribution< _RealType > & __d2) [inline]`

Return true if two piecewise linear distributions have different parameters.

Definition at line 6006 of file random.h.

2.54.2.8 `template<typename _RealType, typename _CharT, typename _Traits > std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > & __os, const std::exponential_distribution< _RealType > & __x)`

Inserts a `exponential_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

| | |
|-------------------|---|
| <code>__os</code> | An output stream. |
| <code>__x</code> | A <code>exponential_distribution</code> random number distribution. |

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1883 of file bits/random.tcc.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

2.54.2.9 `template<typename _RealType, typename _CharT, typename _Traits > std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > & __os, const std::weibull_distribution< _RealType > & __x)`

Inserts a `weibull_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

| | |
|-------------------|---|
| <code>__os</code> | An output stream. |
| <code>__x</code> | A <code>weibull_distribution</code> random number distribution. |

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 2674 of file bits/random.tcc.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

2.54.2.10 `template<typename _RealType, typename _CharT, typename _Traits > std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > & __os, const std::extreme_value_distribution< _RealType > & __x)`

Inserts a `extreme_value_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

| | |
|-------------------|---|
| <code>__os</code> | An output stream. |
| <code>__x</code> | A <code>extreme_value_distribution</code> random number distribution. |

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 2750 of file `bits/random.tcc`.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

```
2.54.2.11 template<typename _RealType, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits> &
std::operator>> ( std::basic_istream<_CharT, _Traits> & __is, std::exponential_distribution<_RealType> &
__x )
```

Extracts a `exponential_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

| | |
|-------------------|---|
| <code>__is</code> | An input stream. |
| <code>__x</code> | A <code>exponential_distribution</code> random number generator engine. |

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1906 of file `bits/random.tcc`.

References `std::dec()`, `std::ios_base::flags()`, `std::exponential_distribution<_RealType>::param()`, and `std::skipws()`.

```
2.54.2.12 template<typename _RealType, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits> &
std::operator>> ( std::basic_istream<_CharT, _Traits> & __is, std::weibull_distribution<_RealType> &
__x )
```

Extracts a `weibull_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

| | |
|-------------------|---|
| <code>__is</code> | An input stream. |
| <code>__x</code> | A <code>weibull_distribution</code> random number generator engine. |

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 2698 of file `bits/random.tcc`.

References `std::dec()`, `std::ios_base::flags()`, `std::weibull_distribution<_RealType>::param()`, and `std::skipws()`.

```
2.54.2.13 template<typename _RealType, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits> &
std::operator>> ( std::basic_istream<_CharT, _Traits> & __is, std::extreme_value_distribution<
_RealType> & __x )
```

Extracts a `extreme_value_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

| | |
|-------------------|---|
| <code>__is</code> | An input stream. |
| <code>__x</code> | A <code>extreme_value_distribution</code> random number generator engine. |

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 2774 of file `bits/random.tcc`.

References `std::dec()`, `std::ios_base::flags()`, `std::extreme_value_distribution< _RealType >::param()`, and `std::skipws()`.

2.55 Policy-Based Data Structures

Collaboration diagram for Policy-Based Data Structures:

Modules

- [Containers](#)
- [Exceptions](#)
- [Tags](#)
- [Traits](#)

2.55.1 Detailed Description

This is a library of policy-based elementary data structures: associative containers and priority queues. It is designed for high-performance, flexibility, semantic safety, and conformance to the corresponding containers in std (except for some points where it differs by design).

For details, see: http://gcc.gnu.org/onlinedocs/libstdc++/ext/pb_ds/index.html

2.56 Random Number Distributions

Collaboration diagram for Random Number Distributions:

Modules

- [Bernoulli Distributions](#)
- [Normal Distributions](#)
- [Poisson Distributions](#)
- [Uniform Distributions](#)

2.56.1 Detailed Description

2.57 Random Number Generation

Collaboration diagram for Random Number Generation:

Modules

- [Random Number Distributions](#)
- [Random Number Generators](#)
- [Random Number Utilities](#)

Namespaces

- [std::__detail](#)

Functions

- `template<typename _RealType, size_t __bits, typename _UniformRandomNumberGenerator > _RealType std::generate_canonical (_UniformRandomNumberGenerator &__g)`

2.57.1 Detailed Description

A facility for generating random numbers on selected distributions.

2.57.2 Function Documentation

2.57.2.1 `template<typename _RealType, size_t __bits, typename _UniformRandomNumberGenerator > _RealType std::generate_canonical (_UniformRandomNumberGenerator &__g)`

A function template for converting the output of a (integral) uniform random number generator to a floating point result in the range [0-1).

Definition at line 3464 of file `bits/random.tcc`.

References `std::log()`, and `std::min()`.

2.58 Random Number Generators

Collaboration diagram for Random Number Generators:

Classes

- class `std::discard_block_engine< _RandomNumberEngine, __p, __r >`

2.58.1 Detailed Description

These classes define objects which provide random or pseudorandom numbers, either from a discrete or a continuous interval. The random number generator supplied as a part of this library are all uniform random number generators which provide a sequence of random number uniformly distributed over their range.

A number generator is a function object with an `operator()` that takes zero arguments and returns a number.

A compliant random number generator must satisfy the following requirements.

To be documented.

Table 1: Random Number Generator Requirements

2.58.2 Typedef Documentation

2.58.2.1 `typedef linear_congruential_engine<uint_fast32_t, 48271UL, 0UL, 2147483647UL> std::minstd_rand`

An alternative LCR (Lehmer Generator function).

Definition at line 1527 of file `random.h`.

2.58.2.2 `typedef linear_congruential_engine<uint_fast32_t, 16807UL, 0UL, 2147483647UL> std::minstd_rand0`

The classic Minimum Standard `rand0` of Lewis, Goodman, and Miller.

Definition at line 1521 of file `random.h`.

2.58.2.3 `typedef mersenne_twister_engine< uint_fast32_t, 32, 624, 397, 31, 0x9908b0dfUL, 11, 0xffffffffUL, 7, 0x9d2c5680UL, 15, 0xefc60000UL, 18, 1812433253UL> std::mt19937`

The classic Mersenne Twister.

Reference: M. Matsumoto and T. Nishimura, Mersenne Twister: A 623-Dimensionally Equidistributed Uniform Pseudo-Random Number Generator, ACM Transactions on Modeling and Computer Simulation, Vol. 8, No. 1, January 1998, pp 3-30.

Definition at line 1543 of file random.h.

2.58.2.4 `typedef mersenne_twister_engine< uint_fast64_t, 64, 312, 156, 31, 0xb5026f5aa96619e9ULL, 29, 0x5555555555555555ULL, 17, 0x71d67ffeda60000ULL, 37, 0xffff7eee00000000ULL, 43, 6364136223846793005ULL> std::mt19937_64`

An alternative Mersenne Twister.

Definition at line 1555 of file random.h.

2.58.3 Function Documentation

2.58.3.1 `template<typename UIntType, UIntType __a, UIntType __c, UIntType __m> bool std::operator!=(const std::linear_congruential_engine< UIntType, __a, __c, __m > & __lhs, const std::linear_congruential_engine< UIntType, __a, __c, __m > & __rhs) [inline]`

Compares two linear congruential random number generator objects of the same type for inequality.

Parameters

| | |
|--------------------|---|
| <code>__lhs</code> | A linear congruential random number generator object. |
| <code>__rhs</code> | Another linear congruential random number generator object. |

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 409 of file random.h.

2.58.3.2 `template<typename UIntType, size_t __w, size_t __n, size_t __m, size_t __r, UIntType __a, size_t __u, UIntType __d, size_t __s, UIntType __b, size_t __t, UIntType __c, size_t __l, UIntType __f> bool std::operator!=(const std::mersenne_twister_engine< UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f > & __lhs, const std::mersenne_twister_engine< UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f > & __rhs) [inline]`

Compares two % mersenne_twister_engine random number generator objects of the same type for inequality.

Parameters

| | |
|--------------------|---|
| <code>__lhs</code> | A % mersenne_twister_engine random number generator object. |
| <code>__rhs</code> | Another % mersenne_twister_engine random number generator object. |

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 641 of file random.h.

```
2.58.3.3 template<typename _UIntType , size_t __w, size_t __s, size_t __r> bool std::operator!= ( const  
std::subtract_with_carry_engine< _UIntType, __w, __s, __r > &__lhs, const std::subtract_with_carry_engine< _UIntType,  
__w, __s, __r > &__rhs ) [inline]
```

Compares two % subtract_with_carry_engine random number generator objects of the same type for inequality.

Parameters

| | |
|--------------------|--|
| <code>__lhs</code> | A % subtract_with_carry_engine random number generator object. |
| <code>__rhs</code> | Another % subtract_with_carry_engine random number generator object. |

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 840 of file random.h.

```
2.58.3.4 template<typename _RandomNumberEngine , size_t __p, size_t __r> bool std::operator!= ( const
std::discard_block_engine< _RandomNumberEngine, __p, __r > & __lhs, const std::discard_block_engine<
_RandomNumberEngine, __p, __r > & __rhs ) [inline]
```

Compares two discard_block_engine random number generator objects of the same type for inequality.

Parameters

| | |
|--------------------|--|
| <code>__lhs</code> | A discard_block_engine random number generator object. |
| <code>__rhs</code> | Another discard_block_engine random number generator object. |

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1062 of file random.h.

```
2.58.3.5 template<typename _RandomNumberEngine , size_t __w, typename _UIntType > bool std::operator!= (
const std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & __lhs, const
std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & __rhs ) [inline]
```

Compares two independent_bits_engine random number generator objects of the same type for inequality.

Parameters

| | |
|--------------------|---|
| <code>__lhs</code> | A independent_bits_engine random number generator object. |
| <code>__rhs</code> | Another independent_bits_engine random number generator object. |

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1258 of file random.h.

```
2.58.3.6 template<typename _RandomNumberEngine , size_t __k> bool std::operator!= ( const std::shuffle_order_engine<
_RandomNumberEngine, __k > & __lhs, const std::shuffle_order_engine< _RandomNumberEngine, __k > & __rhs )
[inline]
```

Compares two shuffle_order_engine random number generator objects of the same type for inequality.

Parameters

| | |
|--------------------|---|
| <code>__lhs</code> | A <code>shuffle_order_engine</code> random number generator object. |
| <code>__rhs</code> | Another <code>shuffle_order_engine</code> random number generator object. |

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1510 of file `random.h`.

2.58.3.7 `template<typename _RandomNumberEngine, size_t __w, typename _UIntType, typename _CharT, typename _Traits >
std::basic_ostream<_CharT, _Traits>& std::operator<< (std::basic_ostream<_CharT, _Traits> & __os, const
std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType> & __x)`

Inserts the current state of a `independent_bits_engine` random number generator engine `__x` into the output stream `__os`.

Parameters

| | |
|-------------------|--|
| <code>__os</code> | An output stream. |
| <code>__x</code> | A <code>independent_bits_engine</code> random number generator engine. |

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1277 of file `random.h`.

References `std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::base()`.

2.61.1 Detailed Description

A facility for performing regular expression pattern matching.

2.61.2 Typedef Documentation

2.61.2.1 `typedef regex_token_iterator<const char*> std::cregex_token_iterator`

Token iterator for C-style NULL-terminated strings.

Definition at line 2704 of file `regex.h`.

2.61.2.2 `typedef sub_match<const char*> std::csub_match`

Standard regex submatch over a C-style null-terminated string.

Definition at line 912 of file `regex.h`.

2.61.2.3 `typedef basic_regex<char> std::regex`

Standard regular expressions.

Definition at line 784 of file `regex.h`.

2.61.2.4 `typedef regex_token_iterator<string::const_iterator> std::sregex_token_iterator`

Token iterator for standard strings.

Definition at line 2707 of file `regex.h`.

2.61.2.5 `typedef sub_match<string::const_iterator> std::ssub_match`

Standard regex submatch over a standard string.

Definition at line 915 of file `regex.h`.

2.61.2.6 `typedef regex_token_iterator<const wchar_t*> std::wcregex_token_iterator`

Token iterator for C-style NULL-terminated wide strings.

Definition at line 2711 of file regex.h.

2.61.2.7 `typedef sub_match<const wchar_t*> std::wcregex_sub_match`

Regex submatch over a C-style null-terminated wide string.

Definition at line 919 of file regex.h.

2.61.2.8 `typedef basic_regex<wchar_t> std::wregex`

Standard wide-character regular expressions.

Definition at line 788 of file regex.h.

2.61.2.9 `typedef regex_token_iterator<wstring::const_iterator> std::wsregex_token_iterator`

Token iterator for standard wide-character strings.

Definition at line 2714 of file regex.h.

2.61.2.10 `typedef sub_match<wstring::const_iterator> std::wsregex_sub_match`

Regex submatch over a standard wide string.

Definition at line 922 of file regex.h.

2.61.3 Function Documentation

2.61.3.1 `template<typename _Bilter> bool std::operator!=(const sub_match<_Bilter> &__lhs, const sub_match<_Bilter> &__rhs) [inline]`

Tests the inequivalence of two regular expression submatches.

Parameters

| | |
|--------------------|-------------------------------------|
| <code>__lhs</code> | First regular expression submatch. |
| <code>__rhs</code> | Second regular expression submatch. |

Returns

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 946 of file regex.h.

References `std::sub_match<_Bilter>::compare()`.

2.61.3.2 `template<typename _Bi_iter, typename _Ch_traits, typename _Ch_alloc> bool std::operator!=(const __sub_match_string<_Bi_iter, _Ch_traits, _Ch_alloc> &__lhs, const sub_match<_Bi_iter> &__rhs) [inline]`

Tests the inequivalence of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 1021 of file `regex.h`.

2.61.3.3 `template<typename _Bi_iter, typename _Ch_traits, typename _Ch_alloc> bool std::operator!=(const sub_match< _Bi_iter> & __lhs, const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc> & __rhs) [inline]`

Tests the inequivalence of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string. |

Returns

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 1095 of file `regex.h`.

2.61.3.4 `template<typename _Bi_iter> bool std::operator!=(typename iterator_traits< _Bi_iter>::value_type const * __lhs, const sub_match< _Bi_iter> & __rhs) [inline]`

Tests the inequivalence of an iterator value and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string. |

Returns

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 1169 of file `regex.h`.

2.61.3.5 `template<typename _Bi_iter> bool std::operator!=(const sub_match< _Bi_iter> & __lhs, typename iterator_traits< _Bi_iter>::value_type const * __rhs) [inline]`

Tests the inequivalence of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A pointer to a string. |

Returns

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 1243 of file `regex.h`.

```
2.61.3.6  template<typename _Bi_iter > bool std::operator!=( typename iterator_traits< _Bi_iter >::value_type const & __lhs,  
                  const sub_match< _Bi_iter > & __rhs )  [inline]
```

Tests the inequivalence of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 1320 of file `regex.h`.

```
2.61.3.7 template<typename _Bi_iter > bool std::operator!= ( const sub_match< _Bi_iter > & __lhs, typename iterator_traits<
    _Bi_iter>::value_type const & __rhs ) [inline]
```

Tests the inequivalence of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A const string reference. |

Returns

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 1400 of file `regex.h`.

```
2.61.3.8 template<typename _Bi_iter, class _Alloc > bool std::operator!= ( const match_results< _Bi_iter, _Alloc > & __m1,
    const match_results< _Bi_iter, _Alloc > & __m2 ) [inline]
```

Compares two `match_results` for inequality.

Returns

true if the two objects do not refer to the same match, false otherwise.

Definition at line 1928 of file `regex.h`.

```
2.61.3.9 template<typename _Bilter > bool std::operator< ( const sub_match< _Bilter > & __lhs, const sub_match< _Bilter > &
    __rhs ) [inline]
```

Tests the ordering of two regular expression submatches.

Parameters

| | |
|--------------------|-------------------------------------|
| <code>__lhs</code> | First regular expression submatch. |
| <code>__rhs</code> | Second regular expression submatch. |

Returns

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 957 of file `regex.h`.

References `std::sub_match< _Bilter >::compare()`.

```
2.61.3.10 template<typename _Bi_iter, typename _Ch_traits, typename _Ch_alloc > bool std::operator< ( const
    _sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __lhs, const sub_match< _Bi_iter > & __rhs ) [inline]
```

Tests the ordering of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1033 of file `regex.h`.

References `std::sub_match<_Biter>::compare()`.

2.61.3.11 `template<typename _Bi_iter, class _Ch_traits, class _Ch_alloc> bool std::operator< (const sub_match<_Bi_iter> & __lhs, const __sub_match_string<_Bi_iter, _Ch_traits, _Ch_alloc> & __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string. |

Returns

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1107 of file `regex.h`.

References `std::basic_string<_CharT, _Traits, _Alloc>::compare()`.

2.61.3.12 `template<typename _Bi_iter> bool std::operator< (typename iterator_traits<_Bi_iter>::value_type const * __lhs, const sub_match<_Bi_iter> & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1181 of file `regex.h`.

References `std::sub_match<_Biter>::compare()`.

2.61.3.13 `template<typename _Bi_iter> bool std::operator< (const sub_match<_Bi_iter> & __lhs, typename iterator_traits<_Bi_iter>::value_type const * __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string. |

Returns

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1255 of file `regex.h`.

2.61.3.14 `template<typename _Bi_iter> bool std::operator< (typename iterator_traits< _Bi_iter >::value_type const & __lhs, const sub_match< _Bi_iter > & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1332 of file `regex.h`.

References `std::sub_match< _Biter >::compare()`.

2.61.3.15 `template<typename _Bi_iter> bool std::operator< (const sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter >::value_type const & __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A const string reference. |

Returns

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1412 of file `regex.h`.

References `std::sub_match< _Biter >::compare()`.

2.61.3.16 `template<typename _Ch_type, typename _Ch_traits, typename _Bi_iter> basic_ostream< _Ch_type, _Ch_traits> & std::operator<< (basic_ostream< _Ch_type, _Ch_traits > & __os, const sub_match< _Bi_iter > & __m) [inline]`

Inserts a matched string into an output stream.

Parameters

| | |
|-------------------|--------------------|
| <code>__os</code> | The output stream. |
| <code>__m</code> | A submatch string. |

Returns

the output stream with the submatch string inserted.

Definition at line 1466 of file `regex.h`.

References `std::sub_match<_Bilter>::str()`.

2.61.3.17 `template<typename _Bilter> bool std::operator<= (const sub_match<_Bilter> & __lhs, const sub_match<_Bilter> & __rhs) [inline]`

Tests the ordering of two regular expression submatches.

Parameters

| | |
|--------------------|-------------------------------------|
| <code>__lhs</code> | First regular expression submatch. |
| <code>__rhs</code> | Second regular expression submatch. |

Returns

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 968 of file `regex.h`.

References `std::sub_match<_Bilter>::compare()`.

2.61.3.18 `template<typename _Bi_iter, typename _Ch_traits, typename _Ch_alloc> bool std::operator<= (const __sub_match_string<_Bi_iter, _Ch_traits, _Ch_alloc> & __lhs, const sub_match<_Bi_iter> & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1069 of file `regex.h`.

2.61.3.19 `template<typename _Bi_iter, class _Ch_traits, class _Ch_alloc> bool std::operator<= (const sub_match<_Bi_iter> & __lhs, const __sub_match_string<_Bi_iter, _Ch_traits, _Ch_alloc> & __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string. |

Returns

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1143 of file `regex.h`.

2.61.3.20 `template<typename _Bi_iter> bool std::operator<= (typename iterator_traits<_Bi_iter>::value_type const * __lhs, const sub_match<_Bi_iter> & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1217 of file `regex.h`.

2.61.3.21 `template<typename _Bi_iter> bool std::operator<= (const sub_match<_Bi_iter> & __lhs, typename iterator_traits<_Bi_iter>::value_type const * __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string. |

Returns

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1291 of file `regex.h`.

2.61.3.22 `template<typename _Bi_iter> bool std::operator<= (typename iterator_traits<_Bi_iter>::value_type const & __lhs, const sub_match<_Bi_iter> & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1371 of file `regex.h`.

```
2.61.3.23  template<typename _Bi_iter > bool std::operator<= ( const sub_match< _Bi_iter > & __lhs, typename iterator_traits<
    _Bi_iter >::value_type const & __rhs )  [inline]
```

Tests the ordering of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A const string reference. |

Returns

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1451 of file `regex.h`.

2.61.3.24 `template<typename _Bilter > bool std::operator== (const sub_match< _Bilter > & __lhs, const sub_match< _Bilter > & __rhs) [inline]`

Tests the equivalence of two regular expression submatches.

Parameters

| | |
|--------------------|-------------------------------------|
| <code>__lhs</code> | First regular expression submatch. |
| <code>__rhs</code> | Second regular expression submatch. |

Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 935 of file `regex.h`.

References `std::sub_match< _Bilter >::compare()`.

2.61.3.25 `template<typename _Bi_iter, typename _Ch_traits, typename _Ch_alloc > bool std::operator== (const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __lhs, const sub_match< _Bi_iter > & __rhs) [inline]`

Tests the equivalence of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Tests the equivalence of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string. |

Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 1082 of file `regex.h`.

References `std::basic_string< _CharT, _Traits, _Alloc >::c_str()`, and `std::sub_match< _Bilter >::compare()`.

2.61.3.27 `template<typename _Bi_iter> bool std::operator==(typename iterator_traits< _Bi_iter >::value_type const * __lhs, const sub_match< _Bi_iter > & __rhs) [inline]`

Tests the equivalence of a C string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A C string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 1156 of file `regex.h`.

References `std::sub_match< _Bilter >::compare()`.

2.61.3.28 `template<typename _Bi_iter> bool std::operator==(const sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter >::value_type const * __rhs) [inline]`

Tests the equivalence of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A pointer to a string? |

Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 1230 of file `regex.h`.

References `std::sub_match< _Bilter >::compare()`.

2.61.3.29 `template<typename _Bi_iter> bool std::operator==(typename iterator_traits< _Bi_iter >::value_type const & __lhs, const sub_match< _Bi_iter > & __rhs) [inline]`

Tests the equivalence of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 1304 of file `regex.h`.

References `std::sub_match<_Bilter>::compare()`.

2.61.3.30 `template<typename _Bi_iter> bool std::operator==(const sub_match<_Bi_iter> & __lhs, typename iterator_traits<_Bi_iter>::value_type const & __rhs) [inline]`

Tests the equivalence of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A const string reference. |

Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 1384 of file `regex.h`.

References `std::sub_match<_Bilter>::compare()`.

2.61.3.31 `template<typename _Bi_iter, typename _Alloc> bool std::operator==(const match_results<_Bi_iter, _Alloc> & __m1, const match_results<_Bi_iter, _Alloc> & __m2) [inline]`

Compares two `match_results` for equality.

Returns

true if the two objects refer to the same match, false otherwise.

Definition at line 1904 of file `regex.h`.

References `std::equal()`.

2.61.3.32 `template<typename _Bilter> bool std::operator>(const sub_match<_Bilter> & __lhs, const sub_match<_Bilter> & __rhs) [inline]`

Tests the ordering of two regular expression submatches.

Parameters

| | |
|--------------------|-------------------------------------|
| <code>__lhs</code> | First regular expression submatch. |
| <code>__rhs</code> | Second regular expression submatch. |

Returns

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 990 of file `regex.h`.

References `std::sub_match<_Bilter>::compare()`.

```
2.61.3.33  template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator> ( const  
            __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __lhs, const sub_match< _Bi_iter > & __rhs ) [inline]
```

Tests the ordering of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1045 of file `regex.h`.

2.61.3.34 `template<typename _Bi_iter, class _Ch_traits, class _Ch_alloc> bool std::operator> (const sub_match< _Bi_iter > & __lhs, const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string. |

Returns

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1119 of file `regex.h`.

2.61.3.35 `template<typename _Bi_iter> bool std::operator> (typename iterator_traits< _Bi_iter >::value_type const * __lhs, const sub_match< _Bi_iter > & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1193 of file `regex.h`.

2.61.3.36 `template<typename _Bi_iter> bool std::operator> (const sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter >::value_type const * __rhs) [inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string. |

Returns

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1267 of file `regex.h`.

```
2.61.3.37  template<typename _Bi_iter > bool std::operator> ( typename iterator_traits< _Bi_iter >::value_type const & __lhs,  
                  const sub_match< _Bi_iter > & __rhs )  [inline]
```

Tests the ordering of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1347 of file `regex.h`.

```
2.61.3.38  template<typename _Bi_iter > bool std::operator> ( const sub_match< _Bi_iter > & __lhs, typename iterator_traits<
    _Bi_iter >::value_type const & __rhs ) [inline]
```

Tests the ordering of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A const string reference. |

Returns

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1427 of file `regex.h`.

```
2.61.3.39  template<typename _Bilter > bool std::operator>= ( const sub_match< _Bilter > & __lhs, const sub_match< _Bilter
    > & __rhs ) [inline]
```

Tests the ordering of two regular expression submatches.

Parameters

| | |
|--------------------|-------------------------------------|
| <code>__lhs</code> | First regular expression submatch. |
| <code>__rhs</code> | Second regular expression submatch. |

Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 979 of file `regex.h`.

References `std::sub_match< _Bilter >::compare()`.

```
2.61.3.40  template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator>= ( const
    __sub_match_string< _Bi_iter , _Ch_traits , _Ch_alloc > & __lhs, const sub_match< _Bi_iter > & __rhs ) [inline]
```

Tests the ordering of a string and a regular expression submatch.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | A string. |
|--------------------|-----------|

| | |
|--------------------|--------------------------------|
| <code>__rhs</code> | A regular expression submatch. |
|--------------------|--------------------------------|

Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1057 of file `regex.h`.

```
2.61.3.41 template<typename _Bi_iter, class _Ch_traits, class _Ch_alloc> bool std::operator>= ( const sub_match< _Bi_iter >
    & __lhs, const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __rhs ) [inline]
```

Tests the ordering of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string. |

Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1131 of file `regex.h`.

```
2.61.3.42 template<typename _Bi_iter> bool std::operator>= ( typename iterator_traits< _Bi_iter >::value_type const * __lhs,
    const sub_match< _Bi_iter > & __rhs ) [inline]
```

Tests the ordering of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1205 of file `regex.h`.

```
2.61.3.43 template<typename _Bi_iter> bool std::operator>= ( const sub_match< _Bi_iter > & __lhs, typename iterator_traits<
    _Bi_iter >::value_type const * __rhs ) [inline]
```

Tests the ordering of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string. |

Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1279 of file `regex.h`.

2.61.3.44 `template<typename _Bi_iter> bool std::operator>= (typename iterator_traits<_Bi_iter>::value_type const & __lhs,
const sub_match<_Bi_iter> & __rhs) [inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string. |
| <code>__rhs</code> | A regular expression submatch. |

Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1359 of file `regex.h`.

```
2.61.3.45 template<typename _Bi_iter > bool std::operator>= ( const sub_match< _Bi_iter > & __lhs, typename iterator_traits<
    _Bi_iter >::value_type const & __rhs ) [inline]
```

Tests the ordering of a regular expression submatch and a string.

Parameters

| | |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A const string reference. |

Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1439 of file `regex.h`.

```
2.61.3.46 template<typename _Bi_iter, typename _Alloc, typename _Ch_type, typename _Rx_traits > bool std::regex_match (
    _Bi_iter __s, _Bi_iter __e, match_results< _Bi_iter, _Alloc > & __m, const basic_regex< _Ch_type, _Rx_traits > & __re,
    regex_constants::match_flag_type __flags = regex_constants::match_default ) [inline]
```

Determines if there is a match between the regular expression `e` and all of the character sequence [first, last).

Parameters

| | |
|----------------------|--|
| <code>__s</code> | Start of the character sequence to match. |
| <code>__e</code> | One-past-the-end of the character sequence to match. |
| <code>__m</code> | The match results. |
| <code>__re</code> | The regular expression. |
| <code>__flags</code> | Controls how the regular expression is matched. |

Return values

| | |
|--------------------|-----------------|
| <code>true</code> | A match exists. |
| <code>false</code> | Otherwise. |

Exceptions

| | |
|-----------------|--|
| <code>an</code> | exception of type <code>regex_error</code> . |
|-----------------|--|

Definition at line 1970 of file `regex.h`.

Referenced by `std::regex_match()`.

```
2.61.3.47 template<typename _Bi_iter, typename _Ch_type, typename _Rx_traits > bool std::regex_match ( _Bi_iter __first,
    _Bi_iter __last, const basic_regex< _Ch_type, _Rx_traits > & __re, regex_constants::match_flag_type __flags =
    regex_constants::match_default ) [inline]
```

Indicates if there is a match between the regular expression `e` and all of the character sequence [first, last).

Parameters

| | |
|----------------------|--|
| <code>__first</code> | Beginning of the character sequence to match. |
| <code>__last</code> | One-past-the-end of the character sequence to match. |
| <code>__re</code> | The regular expression. |
| <code>__flags</code> | Controls how the regular expression is matched. |

Return values

| | |
|--------------------|-----------------|
| <code>true</code> | A match exists. |
| <code>false</code> | Otherwise. |

Exceptions

| | |
|-----------------|--|
| <code>an</code> | exception of type <code>regex_error</code> . |
|-----------------|--|

Definition at line 1998 of file `regex.h`.

References `std::regex_match()`.

```
2.61.3.48 template<typename _Ch_type, typename _Alloc, typename _Rx_traits> bool std::regex_match ( const _Ch_type
* __s, match_results< const _Ch_type*, _Alloc> & __m, const basic_regex< _Ch_type, _Rx_traits> & __re,
regex_constants::match_flag_type __f = regex_constants::match_default ) [inline]
```

Determines if there is a match between the regular expression `e` and a C-style null-terminated string.

Parameters

| | |
|-------------------|---|
| <code>__s</code> | The C-style null-terminated string to match. |
| <code>__m</code> | The match results. |
| <code>__re</code> | The regular expression. |
| <code>__f</code> | Controls how the regular expression is matched. |

Return values

| | |
|--------------------|-----------------|
| <code>true</code> | A match exists. |
| <code>false</code> | Otherwise. |

|-----------------|--|
| <code>an</code> | exception of type <code>regex_error</code> . |
|-----------------|--|

Definition at line 2023 of file `regex.h`.

References `std::regex_match()`.

```
2.61.3.49 template<typename _Ch_traits, typename _Ch_alloc, typename _Alloc, typename _Ch_type, typename _Rx_traits>
bool std::regex_match ( const basic_string< _Ch_type, _Ch_traits, _Ch_alloc> & __s, match_results< typename
basic_string< _Ch_type, _Ch_traits, _Ch_alloc>::const_iterator, _Alloc> & __m, const basic_regex< _Ch_type,
_Rx_traits> & __re, regex_constants::match_flag_type __flags = regex_constants::match_default )
[inline]
```

Determines if there is a match between the regular expression `e` and a string.

Parameters

| | |
|----------------------|---|
| <code>__s</code> | The string to match. |
| <code>__m</code> | The match results. |
| <code>__re</code> | The regular expression. |
| <code>__flags</code> | Controls how the regular expression is matched. |

Return values

| | |
|--------------------|-----------------|
| <code>true</code> | A match exists. |
| <code>false</code> | Otherwise. |

Exceptions

| | |
|-----------------|--|
| <code>an</code> | exception of type <code>regex_error</code> . |
|-----------------|--|

Definition at line 2047 of file `regex.h`.

```
2.61.3.50 template<typename _Ch_type, class _Rx_traits> bool std::regex_match ( const _Ch_type *
    __s, const basic_regex< _Ch_type, _Rx_traits> & __re, regex_constants::match_flag_type __f =
    regex_constants::match_default ) [inline]
```

Indicates if there is a match between the regular expression `e` and a C-style null-terminated string.

Parameters

| | |
|-------------------|---|
| <code>__s</code> | The C-style null-terminated string to match. |
| <code>__re</code> | The regular expression. |
| <code>__f</code> | Controls how the regular expression is matched. |

Return values

| | |
|--------------------|-----------------|
| <code>true</code> | A match exists. |
| <code>false</code> | Otherwise. |

Exceptions

References `std::regex_match()`.

```
2.61.3.51 template<typename _Ch_traits, typename _Str_allocator, typename _Ch_type, typename _Rx_traits> bool
    std::regex_match ( const basic_string< _Ch_type, _Ch_traits, _Str_allocator> & __s, const basic_regex< _Ch_type,
    _Rx_traits> & __re, regex_constants::match_flag_type __flags = regex_constants::match_default )
    [inline]
```

Indicates if there is a match between the regular expression `e` and a string.

Parameters

| | |
|-------------------|------------------------------|
| <code>__s</code> | [IN] The string to match. |
| <code>__re</code> | [IN] The regular expression. |

| | |
|----------------------|--|
| <code>__flags</code> | [IN] Controls how the regular expression is matched. |
|----------------------|--|

Return values

| | |
|--------------------|-----------------|
| <code>true</code> | A match exists. |
| <code>false</code> | Otherwise. |

Exceptions

| | |

Search for a regular expression within a range for multiple times, and replace the matched parts through filling a format string.

Parameters

| | |
|----------------------|--|
| <code>__out</code> | [OUT] The output iterator. |
| <code>__first</code> | [IN] The start of the string to search. |
| <code>__last</code> | [IN] One-past-the-end of the string to search. |
| <code>__e</code> | [IN] The regular expression to search for. |
| <code>__fmt</code> | [IN] The format string. |
| <code>__flags</code> | [IN] Search and replace policy flags. |

Returns

`__out`

2.62.1 Detailed Description

Because libstdc++ based its implementation of the STL subsections of the library on the SGI 3.3 implementation, we inherited their extensions as well.

They are additionally documented in the [online documentation](#), a copy of which is also shipped with the library source code (in `.../docs/html/documentation.html`). You can also read the documentation [on SGI's site](#), which is still running even though the code is not maintained.

NB that the following notes are pulled from various comments all over the place, so they may seem stilted.

The `identity_element` functions are not part of the C++ standard; SGI provided them as an extension. Its argument is an operation, and its return value is the identity element for that operation. It is overloaded for addition and multiplication, and you can overload it for your own nefarious operations.

As an extension to the binders, SGI provided composition functors and wrapper functions to aid in their creation. The `unary_compose` functor is constructed from two functions/functors, `f` and `g`. Calling `operator()` with a single argument `x` returns `f(g(x))`. The function `compose1` takes the two functions and constructs a `unary_compose` variable for you.

`binary_compose` is constructed from three functors, `f`, `g1`, and `g2`. Its `operator()` returns `f(g1(x),g2(x))`. The function `compose2` takes `f`, `g1`, and `g2`, and constructs the `binary_compose` instance for you. For example, if `f` returns an `int`, then

```
int answer = (compose2(f,g1,g2))(x);
```

is equivalent to

```
int temp1 = g1(x);
int temp2 = g2(x);
int answer = f(temp1,temp2);
```

But the first form is more compact, and can be passed around as a functor to other algorithms.

As an extension, SGI provided a functor called `identity`. When a functor is required but no operations are desired, this can be used as a pass-through. Its `operator()` returns its argument unchanged.

`select1st` and `select2nd` are extensions provided by SGI. Their `operator()`s take a `std::pair` as an argument, and return either the first member or the second member, respectively. They can be used (especially with the composition functors) to *strip* data from a sequence before performing the remainder of an algorithm.

The `operator()` of the `project1st` functor takes two arbitrary arguments and returns the first one, while `project2nd` returns the second one. They are extensions provided by SGI.

These three functors are each constructed from a single arbitrary variable/value. Later, their `operator()`s completely ignore any arguments passed, and return the stored value.

- `constant_void_fun`'s `operator()` takes no arguments
- `constant_unary_fun`'s `operator()` takes one argument (ignored)
- `constant_binary_fun`'s `operator()` takes two arguments (ignored)

The helper creator functions `constant0`, `constant1`, and `constant2` each take a *result* argument and construct variables of the appropriate functor type.

2.62.2 Function Documentation

2.62.2.1 `template<typename _Tp> const _Tp& __gnu_cxx::__median (const _Tp & __a, const _Tp & __b, const _Tp & __c)`

Find the median of three values.

Parameters

| | |
|------------------|----------|
| <code>__a</code> | A value. |
| <code>__b</code> | A value. |
| <code>__c</code> | A value. |

Returns

One of `a`, `b` or `c`.

If $\{1, m, n\}$ is some convolution of $\{a, b, c\}$ such that $1 \leq m \leq n$ then the value returned will be `m`. This is an SGI extension.

Definition at line 546 of file `ext/algorithm`.

2.62.2.2 `template<typename _Tp, typename _Compare> const _Tp& __gnu_cxx::__median (const _Tp & __a, const _Tp & __b, const _Tp & __c, _Compare __comp)`

Find the median of three values using a predicate for comparison.

Parameters

| | |
|---------------------|---------------------|
| <code>__a</code> | A value. |
| <code>__b</code> | A value. |
| <code>__c</code> | A value. |
| <code>__comp</code> | A binary predicate. |

Returns

One of `a`, `b` or `c`.

If $\{1, m, n\}$ is some convolution of $\{a, b, c\}$ such that `comp (1, m)` and `comp (m, n)` are both true then the value returned will be `m`. This is an SGI extension.

Definition at line 580 of file `ext/algorithm`.

2.62.2.3 `size_t std::_Find_first () const [noexcept]`

Finds the index of the first "on" bit.

Returns

The index of the first bit set, or `size()` if not found.

See Also

`_Find_next`

Definition at line 1364 of file `bitset`.

2.62.2.4 `size_t std::_Find_next (size_t __prev) const [noexcept]`

Finds the index of the next "on" bit after `prev`.

Returns

The index of the next bit set, or `size()` if not found.

Parameters

| | |
|---------------------|---------------------------|
| <code>__prev</code> | Where to start searching. |
|---------------------|---------------------------|

See Also

`_Find_first`

Definition at line 342 of file ext/functional.

2.62.2.15 `template<typename _InputIterator , typename _Size , typename _OutputIterator > pair<_InputIterator, _OutputIterator> __gnu_cxx::copy_n (_InputIterator __first, _Size __count, _OutputIterator __result) [inline]`

Copies the range [first,first+count) into [result,result+count).

Parameters

| | |
|-----------------------|---------------------------------|
| <code>__first</code> | An input iterator. |
| <code>__count</code> | The number of elements to copy. |
| <code>__result</code> | An output iterator. |

Returns

A `std::pair` composed of first+count and result+count.

This is an SGI extension. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Definition at line 120 of file ext/algorithm.

References `std::__iterator_category()`.

2.62.2.16 `template<typename _InputIterator , typename _Distance > void __gnu_cxx::distance (_InputIterator __first, _InputIterator __last, _Distance & __n) [inline]`

This is an SGI extension.

Todo Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

Definition at line 105 of file ext/iterator.

References `std::__iterator_category()`.

2.62.2.17 `template<class _Tp > _Tp __gnu_cxx::identity_element (std::plus<_Tp>) [inline]`

An [SGI extension](#) .

Definition at line 87 of file ext/functional.

2.62.2.18 `template<class _Tp > _Tp __gnu_cxx::identity_element (std::multiplies<_Tp>) [inline]`

An SGI extension .

Definition at line 93 of file ext/functional.

2.62.2.19 `template<typename _InputIterator1, typename _InputIterator2 > int __gnu_cxx::lexicographical_compare_3way (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2)`

memcmp on steroids.

Parameters

| | |
|-----------------------|--------------------|
| <code>__first1</code> | An input iterator. |
| <code>__last1</code> | An input iterator. |
| <code>__first2</code> | An input iterator. |
| <code>__last2</code> | An input iterator. |

Returns

An int, as with `memcmp`.

The return value will be less than zero if the first range is *lexigraphically less than* the second, greater than zero if the second range is *lexigraphically less than* the first, and zero otherwise. This is an SGI extension.

Definition at line 201 of file ext/algorithm.

2.62.2.20 `template<typename _Tp, typename _Integer, typename _MonoidOperation > _Tp __gnu_cxx::power (_Tp __x, _Integer __n, _MonoidOperation __monoid_op) [inline]`

This is an SGI extension.

Todo Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html

Definition at line 113 of file ext/numeric.

2.62.2.21 `template<typename _Tp, typename _Integer > _Tp __gnu_cxx::power (_Tp __x, _Integer __n) [inline]`

This is an SGI extension.

Todo Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html

Definition at line 123 of file ext/numeric.

2.62.2.22 `template<typename _InputIterator, typename _RandomAccessIterator > _RandomAccessIterator __gnu_cxx::random_sample (_InputIterator __first, _InputIterator __last, _RandomAccessIterator __out_first, _RandomAccessIterator __out_last) [inline]`

This is an SGI extension.

Todo Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html

Definition at line 388 of file ext/algorithm.

2.62.2.23 `template<typename _InputIterator , typename _RandomAccessIterator , typename _RandomNumberGenerator >
 _RandomAccessIterator __gnu_cxx::random_sample (_InputIterator __first, _InputIterator __last, _RandomAccessIterator
 __out_first, _RandomAccessIterator __out_last, _RandomNumberGenerator & __rand) [inline]`

This is an SGI extension.

Todo Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

Definition at line 411 of file ext/algorithm.

2.62.2.24 `template<typename _ForwardIterator , typename _OutputIterator , typename _Distance > _OutputIterator
 __gnu_cxx::random_sample_n (_ForwardIterator __first, _ForwardIterator __last, _OutputIterator __out, const _Distance
 __n)`

This is an SGI extension.

Todo Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

Definition at line 267 of file ext/algorithm.

References `std::distance()`, and `std::min()`.

2.62.2.25 `template<typename _ForwardIterator , typename _OutputIterator , typename _Distance , typename
 _RandomNumberGenerator > _OutputIterator __gnu_cxx::random_sample_n (_ForwardIterator __first, _ForwardIterator
 __last, _OutputIterator __out, const _Distance __n, _RandomNumberGenerator & __rand)`

This is an SGI extension.

Todo Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

Definition at line 301 of file ext/algorithm.

References `std::distance()`, and `std::min()`.

2.62.2.26 `template<typename _InputIter , typename _Size , typename _ForwardIter > pair<_InputIter, _ForwardIter>
 __gnu_cxx::uninitialized_copy_n (_InputIter __first, _Size __count, _ForwardIter __result) [inline]`

Copies the range `[first,last)` into `result`.

Parameters

| | |
|-----------------------|---------------------|
| <code>__first</code> | An input iterator. |
| <code>__count</code> | Length |
| <code>__result</code> | An output iterator. |

Returns

`__result + (__first + __count)`

Like `copy()`, but does not require an initialized output range.

Definition at line 122 of file ext/memory.

References `std::__iterator_category()`.

2.63 Sequences

Collaboration diagram for Sequences:

Classes

- struct `std::array<_Tp, _Nm>`
- class `std::basic_string<_CharT, _Traits, _Alloc>`
- class `std::deque<_Tp, _Alloc>`
- class `std::forward_list<_Tp, _Alloc>`
- class `std::list<_Tp, _Alloc>`
- class `std::priority_queue<_Tp, _Sequence, _Compare>`
- class `std::queue<_Tp, _Sequence>`
- class `std::stack<_Tp, _Sequence>`
- class `std::vector<_Tp, _Alloc>`
- class `std::vector<bool, _Alloc>`

2.63.1 Detailed Description

Sequences arrange a collection of objects into a strictly linear order.

The differences between sequences are usually due to one or both of the following:

- memory management
- algorithmic complexity

As an example of the first case, `vector` is required to use a contiguous memory layout, while other sequences such as `deque` are not.

The prime reason for choosing one sequence over another should be based on the second category of differences, algorithmic complexity. For example, if you need to perform many inserts and removals from the middle of a sequence, `list` would be ideal. But if you need to perform constant-time access to random elements of the sequence, then `list` should not be used.

All sequences must meet certain requirements, summarized in [tables](#).

2.64 Set Operation

Collaboration diagram for Set Operation:

Functions

- `template<typename _InputIterator1, typename _InputIterator2 >`
`bool std::includes (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2)`
- `template<typename _InputIterator1, typename _InputIterator2, typename _Compare >`
`bool std::includes (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _Compare __comp)`
- `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator >`
`_OutputIterator std::set_difference (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result)`
- `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare >`
`_OutputIterator std::set_difference (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result, _Compare __comp)`
- `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator >`
`_OutputIterator std::set_intersection (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result)`
- `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare >`
`_OutputIterator std::set_intersection (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result, _Compare __comp)`
- `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator >`
`_OutputIterator std::set_symmetric_difference (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result)`
- `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare >`
`_OutputIterator std::set_symmetric_difference (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result, _Compare __comp)`
- `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator >`
`_OutputIterator std::set_union (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result)`
- `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare >`
`_OutputIterator std::set_union (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result, _Compare __comp)`

2.64.1 Detailed Description

These algorithms are common set operations performed on sequences that are already sorted. The number of comparisons will be linear.

2.64.2 Function Documentation

2.64.2.1 `template<typename _InputIterator1, typename _InputIterator2 > bool std::includes (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2) [inline]`

Determines whether all elements of a sequence exists in a range.

Parameters

| | |
|-----------------------|------------------------|
| <code>__first1</code> | Start of search range. |
| <code>__last1</code> | End of search range. |
| <code>__first2</code> | Start of sequence |
| <code>__last2</code> | End of sequence. |

Returns

True if each element in `[__first2,__last2)` is contained in order within `[__first1,__last1)`. False otherwise.

This operation expects both `[__first1,__last1)` and `[__first2,__last2)` to be sorted. Searches for the presence of each element in `[__first2,__last2)` within `[__first1,__last1)`. The iterators over each range only move forward, so this is a linear algorithm. If an element in `[__first2,__last2)` is not found before the search iterator reaches `__last2`, false is returned.

Definition at line 2833 of file `stl_algo.h`.

2.64.2.2 `template<typename _InputIterator1, typename _InputIterator2, typename _Compare > bool std::includes (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _Compare __comp) [inline]`

Determines whether all elements of a sequence exists in a range using comparison.

Parameters

| | |
|-----------------------|-----------------------------|
| <code>__first1</code> | Start of search range. |
| <code>__last1</code> | End of search range. |
| <code>__first2</code> | Start of sequence |
| <code>__last2</code> | End of sequence. |
| <code>__comp</code> | Comparison function to use. |

Returns

True if each element in `[__first2,__last2)` is contained in order within `[__first1,__last1)` according to `comp`. False otherwise.

This operation expects both `[__first1,__last1)` and `[__first2,__last2)` to be sorted. Searches for the presence of each element in `[__first2,__last2)` within `[__first1,__last1)`, using `comp` to decide. The iterators over each range only move forward, so this is a linear algorithm. If an element in `[__first2,__last2)` is not found before the search iterator reaches `__last2`, false is returned.

Definition at line 2876 of file `stl_algo.h`.

2.64.2.3 `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator > _OutputIterator std::set_difference (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result) [inline]`

Return the difference of two sorted ranges.

Parameters

| | |
|-----------------------|------------------------|
| <code>__first1</code> | Start of first range. |
| <code>__last1</code> | End of first range. |
| <code>__first2</code> | Start of second range. |
| <code>__last2</code> | End of second range. |

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in the first range but not the second in order to the output range. Iterators increment for each range. When the current element of the first range is less than the second, that element is copied and the iterator advances. If the current element of the second range is less, the iterator advances, but no element is copied. If an element is contained in both ranges, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5198 of file `stl_algo.h`.

```
2.64.2.4 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare
> _OutputIterator std::set_difference ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2,
    _InputIterator2 __last2, _OutputIterator __result, _Compare __comp ) [inline]
```

Return the difference of two sorted ranges using comparison functor.

Parameters

| | |
|-----------------------|-------------------------|
| <code>__first1</code> | Start of first range. |
| <code>__last1</code> | End of first range. |
| <code>__first2</code> | Start of second range. |
| <code>__last2</code> | End of second range. |
| <code>__comp</code> | The comparison functor. |

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in the first range but not the second in order to the output range. Iterators increment for each range. When the current element of the first range is less than the second according to `__comp`, that element is copied and the iterator advances. If the current element of the second range is less, no element is copied and the iterator advances. If an element is contained in both ranges according to `__comp`, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5246 of file `stl_algo.h`.

```
2.64.2.5 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator> _OutputIterator
std::set_intersection ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2,
    _OutputIterator __result ) [inline]
```

Return the intersection of two sorted ranges.

Parameters

| | |
|-----------------------|------------------------|
| <code>__first1</code> | Start of first range. |
| <code>__last1</code> | End of first range. |
| <code>__first2</code> | Start of second range. |
| <code>__last2</code> | End of second range. |

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in both ranges in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that iterator advances. If an element is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5082 of file `stl_algo.h`.

```
2.64.2.6 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare
> _OutputIterator std::set_intersection ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2,
    _InputIterator2 __last2, _OutputIterator __result, _Compare __comp ) [inline]
```

Return the intersection of two sorted ranges using comparison functor.

Parameters

| | |
|-----------------------|-------------------------|
| <code>__first1</code> | Start of first range. |
| <code>__last1</code> | End of first range. |
| <code>__first2</code> | Start of second range. |
| <code>__last2</code> | End of second range. |
| <code>__comp</code> | The comparison functor. |

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in both ranges in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to `__comp`, that iterator advances. If an element is contained in both ranges according to `__comp`, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5128 of file `stl_algo.h`.

```
2.64.2.7 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator > _OutputIterator
std::set_symmetric_difference ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2
    __last2, _OutputIterator __result ) [inline]
```

Return the symmetric difference of two sorted ranges.

Parameters

| | |
|-----------------------|------------------------|
| <code>__first1</code> | Start of first range. |
| <code>__last1</code> | End of first range. |
| <code>__first2</code> | Start of second range. |

| | |
|----------------------|----------------------|
| <code>__last2</code> | End of second range. |
|----------------------|----------------------|

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in one range but not the other in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that element is copied and the iterator advances. If an element is contained in both ranges, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5322 of file `stl_algo.h`.

```
2.64.2.8  template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare >
           _OutputIterator std::set_symmetric_difference ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2,
           _InputIterator2 __last2, _OutputIterator __result, _Compare __comp ) [inline]
```

Return the symmetric difference of two sorted ranges using comparison functor.

Parameters

| | |
|-----------------------|-------------------------|
| <code>__first1</code> | Start of first range. |
| <code>__last1</code> | End of first range. |
| <code>__first2</code> | Start of second range. |
| <code>__last2</code> | End of second range. |
| <code>__comp</code> | The comparison functor. |

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in one range but not the other in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to `comp`, that element is copied and the iterator advances. If an element is contained in both ranges according to `__comp`, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5370 of file `stl_algo.h`.

```
2.64.2.9  template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator > _OutputIterator std::set_union
           ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result
           ) [inline]
```

Return the union of two sorted ranges.

Parameters

| | |
|-----------------------|------------------------|
| <code>__first1</code> | Start of first range. |
| <code>__last1</code> | End of first range. |
| <code>__first2</code> | Start of second range. |
| <code>__last2</code> | End of second range. |

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in each range in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that element is copied and the

iterator advanced. If an element is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 4967 of file `stl_algo.h`.

```
2.64.2.10 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare >
    _OutputIterator std::set_union ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2
    __last2, _OutputIterator __result, _Compare __comp ) [inline]
```

Return the union of two sorted ranges using a comparison functor.

Parameters

| | |
|-----------------------|-------------------------|
| <code>__first1</code> | Start of first range. |
| <code>__last1</code> | End of first range. |
| <code>__first2</code> | Start of second range. |
| <code>__last2</code> | End of second range. |
| <code>__comp</code> | The comparison functor. |

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in each range in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to `__comp`, that element is copied and the iterator advanced. If an equivalent element according to `__comp` is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5014 of file `stl_algo.h`.

2.65.1 Detailed Description

2.65.2 Function Documentation

2.65.2.1 `template<typename _BidirectionalIterator > void std::inplace_merge (_BidirectionalIterator __first, _BidirectionalIterator __middle, _BidirectionalIterator __last) [inline]`

Merges two sorted ranges in place.

Parameters

| | |
|-----------------------|-------------------|
| <code>__first</code> | An iterator. |
| <code>__middle</code> | Another iterator. |
| <code>__last</code> | Another iterator. |

Returns

Nothing.

Merges two sorted and consecutive ranges, [`__first`,`__middle`) and [`__middle`,`__last`), and puts the result in [`__first`,`__last`). The output will be sorted. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

If enough additional memory is available, this takes (`__last`-`__first`)-1 comparisons. Otherwise an NlogN algorithm is used, where N is distance(`__first`,`__last`).

Definition at line 2586 of file `stl_algo.h`.

2.65.2.2 `template<typename _BidirectionalIterator, typename _Compare > void std::inplace_merge (_BidirectionalIterator __first, _BidirectionalIterator __middle, _BidirectionalIterator __last, _Compare __comp) [inline]`

Merges two sorted ranges in place.

Parameters

| | |
|-----------------------|-----------------------------------|
| <code>__first</code> | An iterator. |
| <code>__middle</code> | Another iterator. |
| <code>__last</code> | Another iterator. |
| <code>__comp</code> | A functor to use for comparisons. |

Returns

Nothing.

Merges two sorted and consecutive ranges, [`__first`,`__middle`) and [`__middle`,`__last`), and puts the result in [`__first`,`__last`). The output will be sorted. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

If enough additional memory is available, this takes $(_last - _first) - 1$ comparisons. Otherwise an $N \log N$ algorithm is used, where N is $\text{distance}(_first, _last)$.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2626 of file `stl_algo.h`.

2.65.2.3 `template<typename _ForwardIterator> bool std::is_sorted (_ForwardIterator __first, _ForwardIterator __last)`
`[inline]`

Determines whether the elements of a sequence are sorted.

Parameters

| | |
|----------------------|-------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |

Returns

True if the elements are sorted, false otherwise.

Definition at line 3208 of file `stl_algo.h`.

References `std::is_sorted_until()`.

2.65.2.4 `template<typename _ForwardIterator, typename _Compare> bool std::is_sorted (_ForwardIterator __first, _ForwardIterator __last, _Compare __comp)` `[inline]`

Determines whether the elements of a sequence are sorted according to a comparison functor.

Parameters

| | |
|----------------------|-----------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__comp</code> | A comparison functor. |

Returns

True if the elements are sorted, false otherwise.

Definition at line 3222 of file `stl_algo.h`.

References `std::is_sorted_until()`.

2.65.2.5 `template<typename _ForwardIterator> _ForwardIterator std::is_sorted_until (_ForwardIterator __first, _ForwardIterator __last)` `[inline]`

Determines the end of a sorted sequence.

Parameters

| | |
|----------------------|-------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |

Returns

An iterator pointing to the last iterator i in $[_first, _last)$ for which the range $[_first, i)$ is sorted.

Definition at line 3251 of file `stl_algo.h`.

2.65.2.6 `template<typename _ForwardIterator, typename _Compare> _ForwardIterator std::is_sorted_until (_ForwardIterator
__first, _ForwardIterator __last, _Compare __comp) [inline]`

Determines the end of a sorted sequence using comparison functor.

Parameters

| | |
|----------------------|-----------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__comp</code> | A comparison functor. |

Returns

An iterator pointing to the last iterator `i` in `[__first, __last)` for which the range `[__first, i)` is sorted.

Definition at line 3274 of file `stl_algo.h`.

Referenced by `std::is_sorted()`.

2.65.2.7 `template<typename _I1, typename _I2> bool std::lexicographical_compare (_I1 __first1, _I1 __last1, _I2 __first2, _I2 __last2) [inline]`

Performs **dictionary** comparison on ranges.

Parameters

| | |
|-----------------------|--------------------|
| <code>__first1</code> | An input iterator. |
| <code>__last1</code> | An input iterator. |
| <code>__first2</code> | An input iterator. |
| <code>__last2</code> | An input iterator. |

Returns

A boolean true or false.

Returns true if the sequence of elements defined by the range `[first1,last1)` is lexicographically less than the sequence of elements defined by the range `[first2,last2)`. Returns false otherwise. (Quoted from [25.3.8]/1.) If the iterators are all character pointers, then this is an inline call to `memcmp`.

Definition at line 1204 of file `stl_algobase.h`.

2.65.2.8 `template<typename _I1, typename _I2, typename _Compare> bool std::lexicographical_compare (_I1 __first1, _I1 __last1, _I2 __first2, _I2 __last2, _Compare __comp) [inline]`

Performs **dictionary** comparison on ranges.

Parameters

| | |
|-----------------------|--|
| <code>__first1</code> | An input iterator. |
| <code>__last1</code> | An input iterator. |
| <code>__first2</code> | An input iterator. |
| <code>__last2</code> | An input iterator. |
| <code>__comp</code> | A comparison functor . |

Returns

A boolean true or false.

The same as the four-parameter `lexicographical_compare`, but uses the `comp` parameter instead of `<`.

Definition at line 1240 of file `stl_algobase.h`.

Referenced by `std::operator<()`.

2.65.2.9 `template<typename _Tp> const _Tp & std::max (const _Tp & __a, const _Tp & __b) [inline]`

This does what you think it does.

Parameters

| | |
|------------------|----------------------------------|
| <code>__a</code> | A thing of arbitrary type. |
| <code>__b</code> | Another thing of arbitrary type. |

Returns

The greater of the parameters.

This is the simple classic generic implementation. It will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 217 of file `stl_algobase.h`.

Referenced by `__gnu_parallel::__parallel_nth_element()`, `std::_Deque_base<_Tp, _Alloc>::_M_initialize_map()`, `std::deque<_Tp, _Alloc>::_M_reallocate_map()`, `std::discard_block_engine<_RandomNumberEngine, __p, __r>::max()`, `std::shuffle_order_engine<_RandomNumberEngine, __k>::max()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`.

```
2.65.2.10 template<typename _Tp, typename _Compare> const _Tp & std::max ( const _Tp & __a, const _Tp & __b, _Compare
    __comp ) [inline]
```

This does what you think it does.

Parameters

| | |
|---------------------|--|
| <code>__a</code> | A thing of arbitrary type. |
| <code>__b</code> | Another thing of arbitrary type. |
| <code>__comp</code> | A comparison functor . |

Returns

The greater of the parameters.

This will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 261 of file `stl_algobase.h`.

```
2.65.2.11 template<typename _ForwardIterator> _ForwardIterator std::max_element ( _ForwardIterator __first, _ForwardIterator
    __last ) [inline]
```

Return the maximum element in a range.

Parameters

| | |
|----------------------|-----------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |

Returns

Iterator referencing the first instance of the largest value.

Definition at line 5478 of file `stl_algo.h`.

```
2.65.2.12 template<typename _ForwardIterator, typename _Compare> _ForwardIterator std::max_element ( _ForwardIterator
    __first, _ForwardIterator __last, _Compare __comp ) [inline]
```

Return the maximum element in a range using comparison functor.

Parameters

| | |
|----------------------|---------------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |
| <code>__comp</code> | Comparison functor. |

Returns

Iterator referencing the first instance of the largest value according to `__comp`.

Definition at line 5501 of file `stl_algo.h`.

Referenced by `std::valarray<_Tp>::max()`.

2.65.2.13 `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator > _OutputIterator std::merge (`
`_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result)`
`[inline]`

Merges two sorted ranges.

Parameters

| | |
|-----------------------|--|
| <code>__first1</code> | An iterator. |
| <code>__first2</code> | Another iterator. |
| <code>__last1</code> | Another iterator. |
| <code>__last2</code> | Another iterator. |
| <code>__result</code> | An iterator pointing to the end of the merged range. |

Returns

An iterator pointing to the first element *not less than* *val*.

Merges the ranges `[__first1, __last1)` and `[__first2, __last2)` into the sorted range `[__result, __result + (__last1 - __first1) + (__last2 - __first2))`. Both input ranges must be sorted, and the output range must not overlap with either of the input ranges. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

Definition at line 4757 of file `stl_algo.h`.

2.65.2.14 `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare >`
`_OutputIterator std::merge (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2`
`__last2, _OutputIterator __result, _Compare __comp) [inline]`

Merges two sorted ranges.

Parameters

| | |
|-----------------------|--|
| <code>__first1</code> | An iterator. |
| <code>__first2</code> | Another iterator. |
| <code>__last1</code> | Another iterator. |
| <code>__last2</code> | Another iterator. |
| <code>__result</code> | An iterator pointing to the end of the merged range. |

| | |
|---------------------|-----------------------------------|
| <code>__comp</code> | A functor to use for comparisons. |
|---------------------|-----------------------------------|

Returns

An iterator pointing to the first element "not less than" *val*.

Merges the ranges `[__first1, __last1)` and `[__first2, __last2)` into the sorted range `[__result, __result + (__last1 - __first1) + (__last2 - __first2))`. Both input ranges must be sorted, and the output range must not overlap with either of the input ranges. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 4805 of file `stl_algo.h`.

2.65.2.15 `template<typename _Tp> const _Tp & std::min (const _Tp & __a, const _Tp & __b) [inline]`

This does what you think it does.

Parameters

| | |
|------------------|----------------------------------|
| <code>__a</code> | A thing of arbitrary type. |
| <code>__b</code> | Another thing of arbitrary type. |

Returns

The lesser of the parameters.

This is the simple classic generic implementation. It will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 194 of file `stl_algobase.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, `__gnu_parallel::__parallel_sort_qs_divide()`, `__gnu_profile::__report()`, `__gnu_parallel::__search_template()`, `__gnu_parallel::__sequential_random_shuffle()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare()`, `std::basic_string< _Ch_type >::compare()`, `std::basic_string< _CharT, _Traits, _Alloc >::compare()`, `std::generate_canonical()`, `std::discard_block_engine< _RandomNumberEngine, __p, __r >::min()`, `std::shuffle_order_engine< _RandomNumberEngine, __k >::min()`, `__gnu_parallel::__multiseq_partition()`, `__gnu_parallel::__multiseq_selection()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `__gnu_cxx::random_sample_n()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind()`, `std::basic_string< _CharT, _Traits, _Alloc >::rfind()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_streambuf< _CharT, _Traits >::xsgetn()`, `std::basic_filebuf< _CharT, _Traits >::xsputn()`, and `std::basic_streambuf< _CharT, _Traits >::xsputn()`.

2.65.2.16 `template<typename _Tp, typename _Compare> const _Tp & std::min (const _Tp & __a, const _Tp & __b, _Compare __comp) [inline]`

This does what you think it does.

Parameters

| | |
|------------------|----------------------------------|
| <code>__a</code> | A thing of arbitrary type. |
| <code>__b</code> | Another thing of arbitrary type. |

| | |
|---------------------|--|
| <code>__comp</code> | A comparison functor . |
|---------------------|--|

Returns

The lesser of the parameters.

This will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 240 of file `stl_algobase.h`.

2.65.2.17 `template<typename _ForwardIterator > _ForwardIterator std::min_element (_ForwardIterator __first, _ForwardIterator __last) [inline]`

Return the minimum element in a range.

Parameters

| | |
|----------------------|-----------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |

Returns

Iterator referencing the first instance of the smallest value.

Definition at line 5419 of file `stl_algo.h`.

2.65.2.18 `template<typename _ForwardIterator, typename _Compare > _ForwardIterator std::min_element (_ForwardIterator __first, _ForwardIterator __last, _Compare __comp) [inline]`

Return the minimum element in a range using comparison functor.

Parameters

| | |
|----------------------|---------------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |
| <code>__comp</code> | Comparison functor. |

Returns

Iterator referencing the first instance of the smallest value according to `__comp`.

Definition at line 5442 of file `stl_algo.h`.

Referenced by `std::valarray<_Tp>::min()`.

2.65.2.19 `template<typename _Tp > pair< const _Tp &, const _Tp & > std::minmax (const _Tp & __a, const _Tp & __b) [inline]`

Determines min and max at once as an ordered pair.

Parameters

| | |
|------------------|----------------------------|
| <code>__a</code> | A thing of arbitrary type. |
|------------------|----------------------------|

| | |
|------------------|----------------------------------|
| <code>__b</code> | Another thing of arbitrary type. |
|------------------|----------------------------------|

Returns

A pair(`__b`, `__a`) if `__b` is smaller than `__a`, pair(`__a`, `__b`) otherwise.

Definition at line 3298 of file `stl_algo.h`.

```
2.65.2.20  template<typename _Tp , typename _Compare > pair< const _Tp &, const _Tp & > std::minmax ( const _Tp & __a,
            const _Tp & __b, _Compare __comp ) [inline]
```

Determines min and max at once as an ordered pair.

Parameters

| | |
|---------------------|--|
| <code>__a</code> | A thing of arbitrary type. |
| <code>__b</code> | Another thing of arbitrary type. |
| <code>__comp</code> | A comparison functor . |

Returns

A pair(`__b`, `__a`) if `__b` is smaller than `__a`, pair(`__a`, `__b`) otherwise.

Definition at line 3318 of file `stl_algo.h`.

```
2.65.2.21  template<typename _ForwardIterator > pair<_ForwardIterator, _ForwardIterator> std::minmax_element (
            _ForwardIterator __first, _ForwardIterator __last ) [inline]
```

Return a pair of iterators pointing to the minimum and maximum elements in a range.

Parameters

| | |
|----------------------|-----------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |

Returns

make_pair(m, M), where m is the first iterator i in [`__first`, `__last`) such that no other element in the range is smaller, and where M is the last iterator i in [`__first`, `__last`) such that no other element in the range is larger.

Definition at line 3396 of file `stl_algo.h`.

```
2.65.2.22  template<typename _ForwardIterator , typename _Compare > pair<_ForwardIterator, _ForwardIterator>
            std::minmax_element ( _ForwardIterator __first, _ForwardIterator __last, _Compare __comp ) [inline]
```

Return a pair of iterators pointing to the minimum and maximum elements in a range.

Parameters

| | |
|----------------------|---------------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |
| <code>__comp</code> | Comparison functor. |

Returns

make_pair(m, M), where m is the first iterator i in [`__first`, `__last`) such that no other element in the range is smaller, and where M is the last iterator i in [`__first`, `__last`) such that no other element in the range is larger.

Definition at line 3422 of file `stl_algo.h`.

2.65.2.23 `template<typename _BidirectionalIterator > bool std::next_permutation (_BidirectionalIterator __first,
_BidirectionalIterator __last) [inline]`

Permute range into the next *dictionary* ordering.

Parameters

| | |
|----------------------|-----------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |

Returns

False if wrapped to first permutation, true otherwise.

Treats all permutations of the range as a set of *dictionary* sorted sequences. Permutes the current sequence into the next one of this set. Returns true if there are more sequences to generate. If the sequence is the largest of the set, the smallest is generated and false returned.

Definition at line 2957 of file `stl_algo.h`.

2.65.2.24 `template<typename _BidirectionalIterator, typename _Compare> bool std::next_permutation (_BidirectionalIterator __first, _BidirectionalIterator __last, _Compare __comp) [inline]`

Permute range into the next *dictionary* ordering using comparison functor.

Parameters

| | |
|----------------------|-----------------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |
| <code>__comp</code> | A comparison functor. |

Returns

False if wrapped to first permutation, true otherwise.

Treats all permutations of the range `[__first,__last)` as a set of *dictionary* sorted sequences ordered by `__comp`. Permutes the current sequence into the next one of this set. Returns true if there are more sequences to generate. If the sequence is the largest of the set, the smallest is generated and false returned.

Definition at line 2988 of file `stl_algo.h`.

2.65.2.25 `template<typename _RandomAccessIterator> void std::nth_element (_RandomAccessIterator __first, _RandomAccessIterator __nth, _RandomAccessIterator __last) [inline]`

Sort a sequence just enough to find a particular position.

Parameters

| | |
|----------------------|-------------------|
| <code>__first</code> | An iterator. |
| <code>__nth</code> | Another iterator. |
| <code>__last</code> | Another iterator. |

Returns

Nothing.

Rearranges the elements in the range `[__first,__last)` so that `*__nth` is the same element that would have been in that position had the whole sequence been sorted. The elements either side of `*__nth` are not completely sorted, but for any iterator *i* in the range `[__first,__nth)` and any iterator *j* in the range `[__nth,__last)` it holds that `*j < *i` is false.

Definition at line 4593 of file `stl_algo.h`.

References `std::__lg()`.

2.65.2.26 `template<typename _RandomAccessIterator, typename _Compare> void std::nth_element (_RandomAccessIterator
__first, _RandomAccessIterator __nth, _RandomAccessIterator __last, _Compare __comp) [inline]`

Sort a sequence just enough to find a particular position using a predicate for comparison.

Parameters

| | |
|----------------------|-----------------------|
| <code>__first</code> | An iterator. |
| <code>__nth</code> | Another iterator. |
| <code>__last</code> | Another iterator. |
| <code>__comp</code> | A comparison functor. |

Returns

Nothing.

Rearranges the elements in the range `[__first,__last)` so that `*__nth` is the same element that would have been in that position had the whole sequence been sorted. The elements either side of `*__nth` are not completely sorted, but for any iterator *i* in the range `[__first,__nth)` and any iterator *j* in the range `[__nth,__last)` it holds that `__comp(*j,*i)` is false.

Definition at line 4631 of file `stl_algo.h`.

References `std::__lg()`.

```
2.65.2.27 template<typename _RandomAccessIterator > void std::partial_sort ( _RandomAccessIterator __first,
    _RandomAccessIterator __middle, _RandomAccessIterator __last ) [inline]
```

Sort the smallest elements of a sequence.

Parameters

| | |
|-----------------------|-------------------|
| <code>__first</code> | An iterator. |
| <code>__middle</code> | Another iterator. |
| <code>__last</code> | Another iterator. |

Returns

Nothing.

Sorts the smallest `(__middle-__first)` elements in the range `[first,last)` and moves them to the range `[__first,__middle)`. The order of the remaining elements in the range `[__middle,__last)` is undefined. After the sort if *i* and *j* are iterators in the range `[__first,__middle)` such that *i* precedes *j* and *k* is an iterator in the range `[__middle,__last)` then `*j<*i` and `*k<*i` are both false.

Definition at line 4521 of file `stl_algo.h`.

```
2.65.2.28 template<typename _RandomAccessIterator , typename _Compare > void std::partial_sort ( _RandomAccessIterator
    __first, _RandomAccessIterator __middle, _RandomAccessIterator __last, _Compare __comp ) [inline]
```

Sort the smallest elements of a sequence using a predicate for comparison.

Parameters

| | |
|-----------------------|-----------------------|
| <code>__first</code> | An iterator. |
| <code>__middle</code> | Another iterator. |
| <code>__last</code> | Another iterator. |
| <code>__comp</code> | A comparison functor. |

Returns

Nothing.

Sorts the smallest (`__middle-__first`) elements in the range `[__first,__last)` and moves them to the range `[__first,__middle)`. The order of the remaining elements in the range `[__middle,__last)` is undefined. After the sort if *i* and *j* are iterators in the range `[__first,__middle)` such that *i* precedes *j* and *k* is an iterator in the range `[__middle,__last)` then `*__comp(j,*i)` and `*__comp(*k,*i)` are both false.

Definition at line 4558 of file `stl_algo.h`.

```
2.65.2.29 template<typename _InputIterator, typename _RandomAccessIterator > _RandomAccessIterator std::partial_sort_copy (
    _InputIterator __first, _InputIterator __last, _RandomAccessIterator __result_first, _RandomAccessIterator __result_last )
    [inline]
```

Copy the smallest elements of a sequence.

Parameters

| | |
|-----------------------------|---------------------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__result_first</code> | A random-access iterator. |
| <code>__result_last</code> | Another random-access iterator. |

Returns

An iterator indicating the end of the resulting sequence.

Copies and sorts the smallest *N* values from the range `[__first,__last)` to the range beginning at `__result_first`, where the number of elements to be copied, *N*, is the smaller of `(__last-__first)` and `(__result_last-__result_first)`. After the sort if *i* and *j* are iterators in the range `[__result_first,__result_first+N)` such that *i* precedes *j* then `*j<*i` is false. The value returned is `__result_first+N`.

Definition at line 1738 of file `stl_algo.h`.

```
2.65.2.30 template<typename _InputIterator, typename _RandomAccessIterator, typename _Compare > _RandomAccessIterator
std::partial_sort_copy ( _InputIterator __first, _InputIterator __last, _RandomAccessIterator __result_first,
    _RandomAccessIterator __result_last, _Compare __comp ) [inline]
```

Copy the smallest elements of a sequence using a predicate for comparison.

Parameters

| | |
|-----------------------------|---------------------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | Another input iterator. |
| <code>__result_first</code> | A random-access iterator. |
| <code>__result_last</code> | Another random-access iterator. |
| <code>__comp</code> | A comparison functor. |

Returns

An iterator indicating the end of the resulting sequence.

Copies and sorts the smallest *N* values from the range `[__first,__last)` to the range beginning at `result_first`, where the number of elements to be copied, *N*, is the smaller of `(__last-__first)` and `(__result_last-__result_first)`. After the sort if *i* and *j* are iterators in the range `[__result_first,__result_first+N)` such that *i* precedes *j* then `*__comp(*j,*i)` is false. The value returned is `__result_first+N`.

Definition at line 1787 of file `stl_algo.h`.

```
2.65.2.31  template<typename _BidirectionalIterator > bool std::prev_permutation ( _BidirectionalIterator __first,  
                                         _BidirectionalIterator __last ) [inline]
```

Permute range into the previous *dictionary* ordering.

Parameters

| | |
|----------------------|-----------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |

Returns

False if wrapped to last permutation, true otherwise.

Treats all permutations of the range as a set of *dictionary* sorted sequences. Permutes the current sequence into the previous one of this set. Returns true if there are more sequences to generate. If the sequence is the smallest of the set, the largest is generated and false returned.

Definition at line 3055 of file `stl_algo.h`.

2.65.2.32 `template<typename _BidirectionalIterator, typename _Compare> bool std::prev_permutation (_BidirectionalIterator __first, _BidirectionalIterator __last, _Compare __comp) [inline]`

Permute range into the previous *dictionary* ordering using comparison functor.

Parameters

| | |
|----------------------|-----------------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |
| <code>__comp</code> | A comparison functor. |

Returns

False if wrapped to last permutation, true otherwise.

Treats all permutations of the range [`__first`,`__last`) as a set of *dictionary* sorted sequences ordered by `__comp`. Permutes the current sequence into the previous one of this set. Returns true if there are more sequences to generate. If the sequence is the smallest of the set, the largest is generated and false returned.

Definition at line 3086 of file `stl_algo.h`.

2.65.2.33 `template<typename _RandomAccessIterator> void std::sort (_RandomAccessIterator __first, _RandomAccessIterator __last) [inline]`

Sort the elements of a sequence.

Parameters

| | |
|----------------------|-------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |

Returns

Nothing.

Sorts the elements in the range [`__first`,`__last`) in ascending order, such that for each iterator *i* in the range [`__first`,`__last`-1), `*i < *(i+1)` is false.

The relative ordering of equivalent elements is not preserved, use `stable_sort()` if this is needed.

Definition at line 4667 of file `stl_algo.h`.

```
2.65.2.34  template<typename _RandomAccessIterator, typename _Compare> void std::sort ( _RandomAccessIterator __first,  
      _RandomAccessIterator __last, _Compare __comp ) [inline]
```

Sort the elements of a sequence using a predicate for comparison.

Parameters

| | |
|----------------------|-----------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__comp</code> | A comparison functor. |

Returns

Nothing.

Sorts the elements in the range `[__first,__last)` in ascending order, such that `__comp(*(i+1),*i)` is false for every iterator `i` in the range `[__first,__last-1)`.

The relative ordering of equivalent elements is not preserved, use `stable_sort()` if this is needed.

Definition at line 4696 of file `stl_algo.h`.

```
2.65.2.35  template<typename _RandomAccessIterator > void std::stable_sort ( _RandomAccessIterator __first,
    _RandomAccessIterator __last ) [inline]
```

Sort the elements of a sequence, preserving the relative order of equivalent elements.

Parameters

| | |
|----------------------|-------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |

Returns

Nothing.

Sorts the elements in the range `[__first,__last)` in ascending order, such that for each iterator `i` in the range `[__first,__last-1)`, `*(i+1)<*i` is false.

The relative ordering of equivalent elements is preserved, so any two elements `x` and `y` in the range `[__first,__last)` such that `x<y` is false and `y<x` is false will have the same relative ordering after calling `stable_sort()`.

Definition at line 4866 of file `stl_algo.h`.

```
2.65.2.36  template<typename _RandomAccessIterator, typename _Compare > void std::stable_sort ( _RandomAccessIterator
    __first, _RandomAccessIterator __last, _Compare __comp ) [inline]
```

Sort the elements of a sequence using a predicate for comparison, preserving the relative order of equivalent elements.

Parameters

| | |
|----------------------|-----------------------|
| <code>__first</code> | An iterator. |
| <code>__last</code> | Another iterator. |
| <code>__comp</code> | A comparison functor. |

Returns

Nothing.

Sorts the elements in the range `[__first,__last)` in ascending order, such that for each iterator `i` in the range `[__first,__last-1)`, `__comp(*(i+1),*i)` is false.

The relative ordering of equivalent elements is preserved, so any two elements `x` and `y` in the range `[__first,__last)` such that `__comp(x,y)` is false and `__comp(y,x)` is false will have the same relative ordering after calling `stable_sort()`.

Definition at line 4899 of file `stl_algo.h`.

2.66 Strings

- `template<typename _IntType, typename _CharT, typename _Traits>`
`std::basic_istream<_CharT, _Traits> & std::operator>> (std::basic_istream<_CharT, _Traits> &, std::uniform_int_distribution<_IntType> &)`
- `template<typename _RealType, typename _CharT, typename _Traits>`
`std::basic_istream<_CharT, _Traits> & std::operator>> (std::basic_istream<_CharT, _Traits> &, std::uniform_real_distribution<_RealType> &)`

2.71.1 Detailed Description

2.71.2 Function Documentation

- 2.71.2.1 `template<typename _IntType> bool std::operator!= (const std::uniform_int_distribution<_IntType> & __d1, const std::uniform_int_distribution<_IntType> & __d2) [inline]`

Return true if two uniform integer distributions have different parameters.

Definition at line 1825 of file random.h.

2.71.2.2 `template<typename _IntType> bool std::operator!=(const std::uniform_real_distribution< _IntType> & __d1, const std::uniform_real_distribution< _IntType> & __d2) [inline]`

Return true if two uniform real distributions have different parameters.

Definition at line 2034 of file random.h.

2.71.2.3 `template<typename _IntType, typename _CharT, typename _Traits> std::basic_ostream< _CharT, _Traits> & std::operator<< (std::basic_ostream< _CharT, _Traits> & __os, const std::uniform_int_distribution< _IntType> & __x)`

Inserts a uniform_int_distribution random number distribution __x into the output stream os.

Parameters

| | |
|-------------------|--|
| <code>__os</code> | An output stream. |
| <code>__x</code> | A uniform_int_distribution random number distribution. |

Returns

The output stream with the state of __x inserted or in an error state.

Definition at line 1029 of file bits/random.tcc.

References std::ios_base::flags(), std::left(), and std::scientific().

2.71.2.4 `template<typename _RealType, typename _CharT, typename _Traits> std::basic_ostream< _CharT, _Traits> & std::operator<< (std::basic_ostream< _CharT, _Traits> & __os, const std::uniform_real_distribution< _RealType> & __x)`

Inserts a uniform_real_distribution random number distribution __x into the output stream __os.

Parameters

| | |
|-------------------|---|
| <code>__os</code> | An output stream. |
| <code>__x</code> | A uniform_real_distribution random number distribution. |

Returns

The output stream with the state of __x inserted or in an error state.

Definition at line 1088 of file bits/random.tcc.

References std::ios_base::flags(), std::left(), and std::scientific().

2.71.2.5 `template<typename _IntType, typename _CharT, typename _Traits> std::basic_istream< _CharT, _Traits> & std::operator>> (std::basic_istream< _CharT, _Traits> & __is, std::uniform_int_distribution< _IntType> & __x)`

Extracts a uniform_int_distribution random number distribution __x from the input stream __is.

Parameters

| | |
|-------------------|---|
| <code>__is</code> | An input stream. |
| <code>__x</code> | A <code>uniform_int_distribution</code> random number generator engine. |

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1050 of file `bits/random.tcc`.

References `std::dec()`, `std::ios_base::flags()`, `std::uniform_int_distribution<_IntType>::param()`, and `std::skipws()`.

2.71.2.6 `template<typename _RealType, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits> & std::operator>> (std::basic_istream<_CharT, _Traits> & __is, std::uniform_real_distribution<_RealType> & __x)`

Extracts a `uniform_real_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

| | |
|-------------------|--|
| <code>__is</code> | An input stream. |
| <code>__x</code> | A <code>uniform_real_distribution</code> random number generator engine. |

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1112 of file `bits/random.tcc`.

References `std::ios_base::flags()`, `std::uniform_real_distribution<_RealType>::param()`, and `std::skipws()`.

2.72 Unordered Associative

Collaboration diagram for Unordered Associative:

Modules

- [Base and Implementation Classes](#)

Classes

- class `std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>`
- class `std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc>`
- class `std::unordered_multiset<_Value, _Hash, _Pred, _Alloc>`
- class `std::unordered_set<_Value, _Hash, _Pred, _Alloc>`

2.72.1 Detailed Description

Unordered associative containers allow fast retrieval of data based on keys.

Each container type is parameterized on a `Key` type, a `Hash` type providing a hashing functor, and an ordering relation used to sort the elements of the container.

All unordered associative containers must meet certain requirements, summarized in [tables](#).

2.73.1 Detailed Description

Components deemed generally useful. Includes pair, tuple, forward/move helpers, ratio, function object, metaprogramming and type traits, time, date, and memory functions.

2.73.2 Function Documentation

2.73.2.1 `template<typename _Tp> _Tp* std::__addressof (_Tp & __r) [inline], [noexcept]`

Same as C++11 `std::addressof`.

Definition at line 47 of file `move.h`.

Referenced by `std::_Destroy()`, `std::addressof()`, `std::begin()`, `std::end()`, `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator->()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::operator->()`, `std::forward_list<_Tp, _Alloc>::remove()`, and `std::list<_Tp, _Alloc>::remove()`.

2.73.2.2 `template<typename _Tp> _Tp* std::addressof (_Tp & __r) [inline], [noexcept]`

Returns the actual address of the object or function referenced by `r`, even in the presence of an overloaded operator`&`.

Parameters

| | |
|------------------|-------------------------------------|
| <code>__r</code> | Reference to an object or function. |
|------------------|-------------------------------------|

Returns

The actual address.

Definition at line 135 of file `move.h`.

References `std::__addressof()`.

Referenced by `std::pointer_traits<_Tp*>::pointer_to()`.

2.73.2.3 `template<typename _Tp> constexpr _Tp&& std::forward (typename std::remove_reference<_Tp>::type & __t) [noexcept]`

Forward an lvalue.

Returns

The parameter cast to the specified type.

This function is used to implement "perfect forwarding".

Definition at line 76 of file `move.h`.

2.73.2.4 `template<typename _Tp> constexpr _Tp&& std::forward (typename std::remove_reference<_Tp>::type && __t) [noexcept]`

Forward an rvalue.

Returns

The parameter cast to the specified type.

This function is used to implement "perfect forwarding".

Definition at line 87 of file `move.h`.

2.73.2.5 `template<class _T1, class _T2> constexpr pair<typename __decay_and_strip<_T1>::__type, typename __decay_and_strip<_T2>::__type> std::make_pair (_T1 && __x, _T2 && __y)`

A convenience wrapper for creating a pair from two objects.

Parameters

| | |
|------------------|--------------------|
| <code>__x</code> | The first object. |
| <code>__y</code> | The second object. |

Returns

A newly-constructed `pair<>` object of the appropriate type.

The standard requires that the objects be passed by reference-to-const, but LWG issue #181 says they should be passed by const value. We follow the LWG by default.

Definition at line 276 of file `stl_pair.h`.

Referenced by `__gnu_parallel::__find_template()`, `__gnu_debug::__get_distance()`, `__gnu_parallel::__parallel_merge_advance()`, `__gnu_parallel::__parallel_sort_qsb()`, `__gnu_parallel::__qsb_local_sort_with_helping()`, `__gnu_parallel::__find_if_selector::__M_sequential_algorithm()`, `__gnu_parallel::__adjacent_find_selector::__M_sequential_algorithm()`, `__gnu_parallel::__find_first_of_selector<_FIterator>::__M_sequential_algorithm()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_parallel::parallel_multiway_merge()`, `__gnu_parallel::parallel_sort_mwms_pu()`, and `__gnu_pbds::detail::pat_trie_base::__Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix()`.

2.73.2.6 `template<typename _Tp> constexpr std::remove_reference<_Tp>::type&& std::move (_Tp && __t) [noexcept]`

Convert a value to an rvalue.

Parameters

| | |
|------------------|----------------------------|
| <code>__t</code> | A thing of arbitrary type. |
|------------------|----------------------------|

Returns

The parameter cast to an rvalue-reference to allow moving it.

Definition at line 101 of file `move.h`.

2.73.2.7 `template<typename _Tp> constexpr conditional<__move_if_noexcept_cond<_Tp>::value, const _Tp&, _Tp&&>::type std::move_if_noexcept (_Tp & __x) [noexcept]`

Conditionally convert a value to an rvalue.

Parameters

| | |
|------------------|----------------------------|
| <code>__x</code> | A thing of arbitrary type. |
|------------------|----------------------------|

Returns

The parameter, possibly cast to an rvalue-reference.

Same as `std::move` unless the type's move constructor could throw and the type is copyable, in which case an lvalue-reference is returned instead.

Definition at line 121 of file `move.h`.

2.73.2.8 `template<class _T1, class _T2> constexpr bool std::operator!= (const pair<_T1, _T2> & __x, const pair<_T1, _T2> & __y) [inline]`

Uses `operator==` to find the result.

Definition at line 227 of file `stl_pair.h`.

2.73.2.9 `template<class _T1, class _T2> constexpr bool std::operator< (const pair< _T1, _T2 > &__x, const pair< _T1, _T2 > &__y) [inline]`

<http://gcc.gnu.org/onlinedocs/libstdc++/manual/utilities.html>

Definition at line 220 of file `stl_pair.h`.

References `std::pair< _T1, _T2 >::first`.

2.73.2.10 `template<class _T1, class _T2> constexpr bool std::operator<= (const pair< _T1, _T2 > &__x, const pair< _T1, _T2 > &__y) [inline]`

Uses `operator<` to find the result.

Definition at line 239 of file `stl_pair.h`.

2.73.2.11 `template<class _T1, class _T2> constexpr bool std::operator== (const pair< _T1, _T2 > &__x, const pair< _T1, _T2 > &__y) [inline]`

Two pairs of the same type are equal iff their members are equal.

Definition at line 214 of file `stl_pair.h`.

References `std::pair< _T1, _T2 >::first`, and `std::pair< _T1, _T2 >::second`.

2.73.2.12 `template<class _T1, class _T2> constexpr bool std::operator> (const pair< _T1, _T2 > &__x, const pair< _T1, _T2 > &__y) [inline]`

Uses `operator<` to find the result.

Definition at line 233 of file `stl_pair.h`.

2.73.2.13 `template<class _T1, class _T2> constexpr bool std::operator>= (const pair< _T1, _T2 > &__x, const pair< _T1, _T2 > &__y) [inline]`

Uses `operator<` to find the result.

Definition at line 245 of file `stl_pair.h`.

2.73.2.14 `template<class _T1, class _T2> void std::swap (pair< _T1, _T2 > &__x, pair< _T1, _T2 > &__y) [inline], [noexcept]`

See `std::pair::swap()`.

Definition at line 254 of file `stl_pair.h`.

2.73.2.15 `template<typename _Tp> void std::swap (_Tp &__a, _Tp &__b) const [inline], [noexcept]`

Swaps two values.

Parameters

| | |
|------------------|----------------------------------|
| <code>__a</code> | A thing of arbitrary type. |
| <code>__b</code> | Another thing of arbitrary type. |

Returns

Nothing.

Definition at line 166 of file `move.h`.

2.73.2.16 `template<typename _Tp, size_t _Nm> void std::swap (_Tp(&) __a[_Nm], _Tp(&) __b[_Nm]) [inline],
[noexcept]`

Swap the contents of two arrays.

Definition at line 185 of file `move.h`.

2.73.2.17 `template<typename... _Elements> void std::swap (tuple< _Elements...> & __x, tuple< _Elements...> & __y)
[inline], [noexcept]`

`swap`

Definition at line 1054 of file `tuple`.

2.73.2.18 `template<typename... _Elements> tuple<_Elements&...> std::tie (_Elements &... __args) [inline],
[noexcept]`

`tie`

Definition at line 1048 of file `tuple`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::lock()`, and `std::try_lock()`.

2.73.2.19 `template<typename... _Tpls, typename = typename enable_if<__and<__is_tuple_like<_Tpls>...>::value>::type>
constexpr auto std::tuple_cat (_Tpls &&... __tpls)-> typename __tuple_cat_result<_Tpls...>::__type`

`tuple_cat`

Definition at line 1036 of file `tuple`.

2.73.3 Variable Documentation

2.73.3.1 `constexpr piecewise_construct_t std::piecewise_construct`

`piecewise_construct`

Definition at line 79 of file `stl_pair.h`.

Referenced by `std::map< _Key, _Tp, _Compare, _Alloc >::operator[]()`.

3.1.1 Detailed Description

GNU extensions for public use.

3.1.2 Function Documentation

3.1.2.1 `template<typename _ToType, typename _FromType> _ToType __gnu_cxx::__static_pointer_cast (const _FromType & __arg) [inline]`

Casting operations for cases where `_FromType` is not a standard pointer. `_ToType` can be a standard or non-standard pointer. Given that `_FromType` is not a pointer, it must have a `get()` method that returns the standard pointer equivalent of the address it points to, and must have an `element_type` typedef which names the type it points to.

Definition at line 68 of file `cast.h`.

3.1.2.2 `template<typename _ToType, typename _FromType> _ToType __gnu_cxx::__static_pointer_cast (_FromType * __arg) [inline]`

Casting operations for cases where `_FromType` is a standard pointer. `_ToType` can be a standard or non-standard pointer.

Definition at line 96 of file `cast.h`.

3.1.2.3 `size_t __gnu_cxx::__Bit_scan_forward (size_t __num) [inline]`

Generic Version of the `bsf` instruction.

Definition at line 513 of file `bitmap_allocator.h`.

Referenced by `__gnu_cxx::bitmap_allocator< typename >::M_allocate_single_object()`.

3.1.2.4 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator!=(const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs) [inline]`

Test difference of two strings.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Returns

True if `__lhs.compare(__rhs) != 0`. False otherwise.

Definition at line 2388 of file `vstring.h`.

3.1.2.5 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator!=(const _CharT * __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs) [inline]`

Test difference of C string and string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String. |

Returns

True if `__rhs.compare(__lhs) != 0`. False otherwise.

Definition at line 2401 of file `vstring.h`.

```
3.1.2.6 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator!= ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT *
__rhs ) [inline]
```

Test difference of string and C string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | String. |
| <code>__rhs</code> | C string. |

Returns

True if `__lhs.compare(__rhs) != 0`. False otherwise.

Definition at line 2414 of file `vstring.h`.

```
3.1.2.7 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ ( const __versa_string< _CharT,
_Traits, _Alloc, _Base > & __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )
```

Concatenate two strings.

Parameters

| | |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string. |

Returns

New string with value of `__lhs` followed by `__rhs`.

Definition at line 181 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve()`, and `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size()`.

```
3.1.2.8 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ ( const _CharT * __lhs, const
__versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )
```

Concatenate C string and string.

Parameters

| | |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string. |

Returns

New string with value of `__lhs` followed by `__rhs`.

Definition at line 194 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

3.1.2.9 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string<_CharT, _Traits, _Alloc, _Base> __gnu_cxx::operator+ (_CharT __lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base> & __rhs)`

Concatenate character and string.

Parameters

| | |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string. |

Returns

New string with `__lhs` followed by `__rhs`.

Definition at line 211 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::push_back()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::reserve()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

3.1.2.10 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string<_CharT, _Traits, _Alloc, _Base> __gnu_cxx::operator+ (const __versa_string<_CharT, _Traits, _Alloc, _Base> & __lhs, const _CharT * __rhs)`

Concatenate string and C string.

Parameters

| | |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string. |

Returns

New string with `__lhs` followed by `__rhs`.

Definition at line 224 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

3.1.2.11 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string<_CharT, _Traits, _Alloc, _Base> __gnu_cxx::operator+ (const __versa_string<_CharT, _Traits, _Alloc, _Base> & __lhs, _CharT __rhs)`

Concatenate string and character.

Parameters

| | |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string. |

Returns

New string with `__lhs` followed by `__rhs`.

Definition at line 241 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::push_back()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::reserve()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

```
3.1.2.12 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> bool __gnu_cxx::operator< ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const
__versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]
```

Test if string precedes string.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 2428 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare()`.

```
3.1.2.13 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator< ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT *
__rhs ) [inline]
```

Test if string precedes C string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | String. |
| <code>__rhs</code> | C string. |

Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 2441 of file `vstring.h`.

```
3.1.2.14 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator< ( const _CharT * __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > &
__rhs ) [inline]
```

Test if C string precedes string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String. |

Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 2454 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

```
3.1.2.15 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> bool __gnu_cxx::operator<= ( const __versa_string<_CharT, _Traits, _Alloc, _Base > &__lhs, const
__versa_string<_CharT, _Traits, _Alloc, _Base > &__rhs ) [inline]
```

Test if string doesn't follow string.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 2508 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

```
3.1.2.16 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator<= ( const __versa_string<_CharT, _Traits, _Alloc, _Base > &__lhs, const _CharT *
__rhs ) [inline]
```

Test if string doesn't follow C string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | String. |
| <code>__rhs</code> | C string. |

Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 2521 of file `vstring.h`.

```
3.1.2.17 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator<= ( const _CharT * __lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base > &
__rhs ) [inline]
```

Test if C string doesn't follow string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String. |

Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 2534 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare()`.

3.1.2.18 `template<typename _Tp> bool __gnu_cxx::operator==(const _Pointer_adapter<_Tp> &__lhs, const _Pointer_adapter<_Tp> &__rhs) [inline]`

Comparison operators for `_Pointer_adapter` defer to the base class' comparison operators, when possible.

Definition at line 529 of file `pointer.h`.

3.1.2.19 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator==(const __versa_string<_CharT, _Traits, _Alloc, _Base> &__lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base> &__rhs) [inline]`

Test equivalence of two strings.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Returns

True if `__lhs.compare(__rhs) == 0`. False otherwise.

Definition at line 2337 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare()`.

3.1.2.20 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator==(const _CharT *__lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base> &__rhs) [inline]`

Test equivalence of C string and string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String. |

Returns

True if `__rhs.compare(__lhs) == 0`. False otherwise.

Definition at line 2361 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare()`.

3.1.2.21 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator==(const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT * __rhs) [inline]`

Test equivalence of string and C string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | String. |
| <code>__rhs</code> | C string. |

Returns

True if `__lhs.compare(__rhs) == 0`. False otherwise.

Definition at line 2374 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare()`.

```
3.1.2.22 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename >
class _Base> bool __gnu_cxx::operator> ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const
__versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]
```

Test if string follows string.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Returns

True if `__lhs` follows `__rhs`. False otherwise.

Definition at line 2468 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare()`.

```
3.1.2.23 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator> ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT *
__rhs ) [inline]
```

Test if string follows C string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | String. |
| <code>__rhs</code> | C string. |

Returns

True if `__lhs` follows `__rhs`. False otherwise.

Definition at line 2481 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare()`.

```
3.1.2.24 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator> ( const _CharT * __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > &
__rhs ) [inline]
```

Test if C string follows string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String. |

Returns

True if `__lhs` follows `__rhs`. False otherwise.

Definition at line 2494 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

3.1.2.25 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator>= (const __versa_string<_CharT, _Traits, _Alloc, _Base > &__lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base > &__rhs) [inline]`

Test if string doesn't precede string.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Returns

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 2548 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

3.1.2.26 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator>= (const __versa_string<_CharT, _Traits, _Alloc, _Base > &__lhs, const _CharT * __rhs) [inline]`

Test if string doesn't precede C string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | String. |
| <code>__rhs</code> | C string. |

Returns

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 2561 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

3.1.2.27 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator>= (const _CharT * __lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base > &__rhs) [inline]`

Test if C string doesn't precede string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String. |

Returns

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 2574 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

3.1.2.28 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::swap (__versa_string<_CharT, _Traits, _Alloc, _Base > &__lhs, __versa_string<_CharT, _Traits, _Alloc, _Base > &__rhs) [inline]`

Swap contents of two strings.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Exchanges the contents of `__lhs` and `__rhs` in constant time.

Definition at line 2588 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::swap()`.

size_t [__num_blocks](#) (_AddrPair __ap)

3.2.1 Detailed Description

Implementation details not part of the namespace `__gnu_cxx` interface.

3.2.2 Function Documentation

3.2.2.1 `void __gnu_cxx::__detail::_bit_allocate (size_t * __pmap, size_t __pos) throw` `[inline]`

Mark a memory address as allocated by re-setting the corresponding bit in the bit-map.

Definition at line 488 of file `bitmap_allocator.h`.

Referenced by `__gnu_cxx::bitmap_allocator< typename >::_M_allocate_single_object()`.

3.2.2.2 `void __gnu_cxx::__detail::_bit_free (size_t * __pmap, size_t __pos) throw` `[inline]`

Mark a memory address as free by setting the corresponding bit in the bit-map.

Definition at line 499 of file `bitmap_allocator.h`.

Referenced by `__gnu_cxx::bitmap_allocator< typename >::_M_deallocate_single_object()`.

3.2.2.3 `template<typename AddrPair> size_t __gnu_cxx::__detail::_num_bitmaps (AddrPair __ap)` `[inline]`

The number of Bit-maps pointed to by the address pair passed to the function.

Definition at line 276 of file `bitmap_allocator.h`.

References `__num_blocks()`.

Referenced by `__gnu_cxx::bitmap_allocator< typename >::_M_allocate_single_object()`, and `__gnu_cxx::bitmap_allocator< typename >::_M_deallocate_single_object()`.

3.2.2.4 `template<typename AddrPair> size_t __gnu_cxx::__detail::_num_blocks (AddrPair __ap)` `[inline]`

The number of Blocks pointed to by the address pair passed to the function.

Definition at line 268 of file `bitmap_allocator.h`.

Referenced by `__num_bitmaps()`.

3.4.1 Detailed Description

GNU debug classes for public use.

3.4.2 Enumeration Type Documentation

3.4.2.1 enum `__gnu_debug::_Distance_precision`

The precision to which we can calculate the distance between two iterators.

Definition at line 68 of file `safe_iterator.h`.

3.4.3 Function Documentation

3.4.3.1 `template<typename _Iterator > _Siter_base<_Iterator>::iterator_type __gnu_debug::_base (_Iterator __it)` [inline]

Helper function to extract base iterator of random access safe iterator in order to reduce performance impact of debug mode. Limited to random access iterator because it is the only category for which it is possible to check for correct iterators order in the `__valid_range` function thanks to the `<` operator.

Definition at line 550 of file `functions.h`.

Referenced by `__gnu_parallel::_for_each_template_random_access_workstealing()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence >::M_before_dereferenceable()`, `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::internal()`, `std::left()`, `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, `std::nouppercase()`, `std::oct()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

3.4.3.2 `template<typename _Iterator > bool __gnu_debug::_check_dereferenceable (const _Iterator &)` [inline]

Assume that some arbitrary iterator is dereferenceable, because we can't prove that it isn't.

Definition at line 79 of file `functions.h`.

3.4.3.3 `template<typename _Tp > bool __gnu_debug::_check_dereferenceable (const _Tp * __ptr)` [inline]

Non-NULL pointers are dereferenceable.

Definition at line 85 of file `functions.h`.

3.4.3.4 `template<typename _Iterator, typename _Sequence > bool __gnu_debug::_check_dereferenceable (const _Safe_iterator<_Iterator, _Sequence > & __x)` [inline]

Safe iterators know if they are dereferenceable.

Definition at line 91 of file `functions.h`.

References `__gnu_debug::_Safe_iterator<_Iterator, _Sequence >::M_dereferenceable()`.

3.4.3.5 `template<typename _Iterator, typename _Sequence > bool __gnu_debug::_check_dereferenceable (const _Safe_local_iterator<_Iterator, _Sequence > & __x)` [inline]

Safe local iterators know if they are dereferenceable.

Definition at line 97 of file `functions.h`.

3.4.3.6 `template<typename _Tp> bool __gnu_debug::__check_singular (const _Tp* __ptr) [inline]`

Non-NULL pointers are nonsingular.

Definition at line 72 of file functions.h.

3.4.3.7 `bool __gnu_debug::__check_singular_aux (const _Safe_iterator_base* __x) [inline]`

Iterators that derive from `_Safe_iterator_base` can be determined singular or non-singular.

Definition at line 62 of file safe_iterator.h.

References `__gnu_debug::_Safe_iterator_base::_M_singular()`.

3.4.3.8 `template<typename _CharT, typename _Integer> const _CharT* __gnu_debug::__check_string (const _CharT* __s, const _Integer& __n __attribute__((unused))) [inline]`

Checks that `__s` is non-NULL or `__n == 0`, and then returns `__s`.

Definition at line 292 of file functions.h.

3.4.3.9 `template<typename _CharT> const _CharT* __gnu_debug::__check_string (const _CharT* __s) [inline]`

Checks that `__s` is non-NULL and then returns `__s`.

Definition at line 304 of file functions.h.

3.4.3.10 `template<typename _Iterator, typename _Sequence, typename _OtherIterator> bool __gnu_debug::__foreign_iterator_aux2 (const _Safe_iterator<_Iterator, _Sequence> & __it, const _Safe_iterator<_OtherIterator, _Sequence> & __other, const _Safe_iterator<_OtherIterator, _Sequence> &) [inline]`

Handle debug iterators from the same type of container.

Definition at line 234 of file functions.h.

3.4.3.11 `template<typename _Iterator, typename _Sequence, typename _OtherIterator, typename _OtherSequence> bool __gnu_debug::__foreign_iterator_aux2 (const _Safe_iterator<_Iterator, _Sequence> & __it, const _Safe_iterator<_OtherIterator, _OtherSequence> & , const _Safe_iterator<_OtherIterator, _OtherSequence> &) [inline]`

Handle debug iterators from different types of container.

Definition at line 243 of file functions.h.

3.4.3.12 `template<typename _Iterator> std::pair<typename std::iterator_traits<_Iterator>::difference_type, _Distance_precision> __gnu_debug::__get_distance (const _Iterator & __lhs, const _Iterator & __rhs, std::random_access_iterator_tag) [inline]`

Determine the distance between two iterators with some known precision.

Definition at line 81 of file safe_iterator.h.

References `std::make_pair()`.

3.4.3.13 `template<typename _InputIterator> bool __gnu_debug::__valid_range (const _InputIterator & __first, const _InputIterator & __last) [inline]`

Don't know what these iterators are, or if they are even iterators (we may get an integral type for `InputIterator`), so see if they are integral and pass them on to the next phase otherwise.

Definition at line 147 of file functions.h.

References `__valid_range_aux()`.

```
3.4.3.14 template<typename _Iterator, typename _Sequence> bool __gnu_debug::__valid_range( const _Safe_iterator< _Iterator,
    _Sequence> & __first, const _Safe_iterator< _Iterator, _Sequence> & __last ) [inline]
```

Safe iterators know how to check if they form a valid range.

Definition at line 156 of file functions.h.

```
3.4.3.15 template<typename _Iterator, typename _Sequence> bool __gnu_debug::__valid_range( const _Safe_local_iterator<
    _Iterator, _Sequence> & __first, const _Safe_local_iterator< _Iterator, _Sequence> & __last ) [inline]
```

Safe local iterators know how to check if they form a valid range.

Definition at line 163 of file functions.h.

```
3.4.3.16 template<typename _Integral> bool __gnu_debug::__valid_range_aux( const _Integral &, const _Integral &,
    std::__true_type ) [inline]
```

We say that integral types for a valid range, and defer to other routines to realize what to do with integral types instead of iterators.

Definition at line 127 of file functions.h.

Referenced by `__valid_range()`.

```
3.4.3.17 template<typename _InputIterator> bool __gnu_debug::__valid_range_aux( const _InputIterator & __first, const
    _InputIterator & __last, std::__false_type ) [inline]
```

We have iterators, so figure out what kind of iterators that are to see if we can check the range ahead of time.

Definition at line 135 of file functions.h.

References `std::__iterator_category()`, and `__valid_range_aux2()`.

```
3.4.3.18 template<typename _RandomAccessIterator> bool __gnu_debug::__valid_range_aux2( const _RandomAccessIterator &
    __first, const _RandomAccessIterator & __last, std::random_access_iterator_tag ) [inline]
```

If the distance between two random access iterators is nonnegative, assume the range is valid.

Definition at line 106 of file functions.h.

Referenced by `__valid_range_aux()`.

```
3.4.3.19 template<typename _InputIterator> bool __gnu_debug::__valid_range_aux2( const _InputIterator &, const _InputIterator
    &, std::input_iterator_tag ) [inline]
```

Can't test for a valid range with input iterators, because iteration may be destructive. So we just assume that the range is valid.

Definition at line 117 of file functions.h.

3.5 `__gnu_internal` Namespace Reference

3.5.1 Detailed Description

GNU implementation details, not for public use or export. Used only when anonymous namespaces cannot be substituted.

3.6 `__gnu_parallel` Namespace Reference

Variables

- static const int [_CASable_bits](#)
- static const [_CASable_CASable_mask](#)

3.6.1 Detailed Description

GNU parallel code for public use.

3.6.2 Typedef Documentation

3.6.2.1 `typedef unsigned short __gnu_parallel::_BinIndex`

Type to hold the index of a bin.

Since many variables of this type are allocated, it should be chosen as small as possible.

Definition at line 47 of file `random_shuffle.h`.

3.6.2.2 `typedef int64_t __gnu_parallel::_CASable`

Longest compare-and-swappable integer type on this platform.

Definition at line 127 of file `types.h`.

3.6.2.3 `typedef uint64_t __gnu_parallel::_SequenceIndex`

Unsigned integer to index `__elements`. The total number of elements for each algorithm must fit into this type.

Definition at line 117 of file `types.h`.

3.6.2.4 `typedef uint16_t __gnu_parallel::_ThreadIndex`

Unsigned integer to index a thread number. The maximum thread number (for each processor) must fit into this type.

Definition at line 123 of file `types.h`.

3.6.3 Enumeration Type Documentation

3.6.3.1 `enum __gnu_parallel::_AlgorithmStrategy`

Strategies for run-time algorithm selection:

Definition at line 67 of file `types.h`.

3.6.3.2 `enum __gnu_parallel::_FindAlgorithm`

Find algorithms:

Definition at line 106 of file `types.h`.

3.6.3.3 `enum __gnu_parallel::_MultiwayMergeAlgorithm`

Merging algorithms:

Definition at line 85 of file `types.h`.

3.6.3.4 `enum __gnu_parallel::_Parallelism`

Run-time equivalents for the compile-time tags.

Enumerator

sequential Not parallel.

parallel_unbalanced Parallel unbalanced (equal-sized chunks).

parallel_balanced Parallel balanced (work-stealing).

parallel_omp_loop Parallel with OpenMP dynamic load-balancing.

parallel_omp_loop_static Parallel with OpenMP static load-balancing.

parallel_taskqueue Parallel with OpenMP taskqueue construct.

Definition at line 44 of file types.h.

3.6.3.5 enum `__gnu_parallel::_PartialSumAlgorithm`

Partial sum algorithms: recursive, linear.

Definition at line 91 of file types.h.

3.6.3.6 enum `__gnu_parallel::_SortAlgorithm`

Sorting algorithms:

Definition at line 76 of file types.h.

3.6.3.7 enum `__gnu_parallel::_SplittingAlgorithm`

Sorting/merging algorithms: sampling, `__exact`.

Definition at line 98 of file types.h.

3.6.4 Function Documentation

3.6.4.1 `template<typename _RAIter, typename _DifferenceTp> void __gnu_parallel::_calc_borders (_RAIter __elements, _DifferenceTp __length, _DifferenceTp * __off)`

Precalculate `__advances` for Knuth-Morris-Pratt algorithm.

Parameters

| | |
|-------------------------|---|
| <code>__elements</code> | Begin iterator of sequence to search for. |
| <code>__length</code> | Length of sequence to search for. |
| <code>__off</code> | Returned <code>__offsets</code> . |

Definition at line 51 of file search.h.

Referenced by `__search_template()`.

3.6.4.2 `template<typename _Tp> bool __gnu_parallel::_compare_and_swap (volatile _Tp * __ptr, _Tp __comparand, _Tp __replacement) [inline]`

Compare-and-swap.

Compare `*__ptr` and `__comparand`. If equal, let `*__ptr=__replacement` and return true, return false otherwise.

Parameters

| | |
|----------------------------|----------------------------|
| <code>__ptr</code> | Pointer to signed integer. |
| <code>__comparand</code> | Compare value. |
| <code>__replacement</code> | Replacement value. |

Definition at line 108 of file parallel/compatibility.h.

Referenced by `__parallel_partition()`, `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::pop_back()`, and `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::pop_front()`.

3.6.4.3 `void __gnu_parallel::__decode2 (_CASable __x, int & __a, int & __b)` [inline]

Decode two integers from one `gnu_parallel::_CASable`.

Parameters

| | |
|------------------|--|
| <code>__x</code> | <code>__gnu_parallel::_CASable</code> to decode integers from. |
| <code>__a</code> | First integer, to be decoded from the most-significant <code>_CASable_bits/2</code> bits of <code>__x</code> . |
| <code>__b</code> | Second integer, to be encoded in the least-significant <code>_CASable_bits/2</code> bits of <code>__x</code> . |

See Also

`__encode2`

Definition at line 133 of file `parallel/base.h`.

References `_CASable_bits`, and `_CASable_mask`.

Referenced by `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::pop_back()`, `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::pop_front()`, and `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::push_front()`.

3.6.4.4 `template<typename _RAIter, typename _DifferenceTp> void __gnu_parallel::_determine_samples (_PMWSSortingData< _RAIter > * __sd, _DifferenceTp __num_samples)`

Select `_M_samples` from a sequence.

Parameters

| | |
|----------------------------|--|
| <code>__sd</code> | Pointer to algorithm data. Result will be placed in <code>__sd->_M_samples</code> . |
| <code>__num_samples</code> | Number of <code>_M_samples</code> to select. |

Definition at line 97 of file `multiway_mergesort.h`.

References `__equally_split()`, `__gnu_parallel::_PMWSSortingData< _RAIter >::_M_samples`, `__gnu_parallel::_PMWSSortingData< _RAIter >::_M_source`, and `__gnu_parallel::_PMWSSortingData< _RAIter >::_M_starts`.

3.6.4.5 `_CASable __gnu_parallel::_encode2 (int __a, int __b) [inline]`

Encode two integers into one `gnu_parallel::_CASable`.

Parameters

| | |
|------------------|---|
| <code>__a</code> | First integer, to be encoded in the most-significant <code>_CASable_bits/2</code> bits. |
| <code>__b</code> | Second integer, to be encoded in the least-significant <code>_CASable_bits/2</code> bits. |

Returns

value encoding `__a` and `__b`.

See Also

`__decode2`

Definition at line 119 of file `parallel/base.h`.

References `_CASable_bits`.

Referenced by `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::_RestrictedBoundedConcurrentQueue()`, `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::pop_back()`, `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::pop_front()`, and `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::push_front()`.

3.6.4.6 `template<typename _DifferenceType, typename _OutputIterator> _OutputIterator __gnu_parallel::__equally_split (_DifferenceType __n, _ThreadIndex __num_threads, _OutputIterator __s)`

function to split a sequence into parts of almost equal size.

The resulting sequence `__s` of length `__num_threads+1` contains the splitting positions when splitting the range `[0, __n)` into parts of almost equal size (plus minus 1). The first entry is 0, the last one `n`. There may result empty parts.

Parameters

| | |
|----------------------------|--------------------|
| <code>__n</code> | Number of elements |
| <code>__num_threads</code> | Number of parts |
| <code>__s</code> | Splitters |

Returns

End of `__splitter` sequence, i.e. `__s+__num_threads+1`

Definition at line 48 of file `equally_split.h`.

Referenced by `__determine_samples()`, `__find_template()`, `__parallel_partial_sum_linear()`, `__parallel_unique_copy()`, `__search_template()`, and `multiway_merge_exact_splitting()`.

3.6.4.7 `template<typename _DifferenceType> _DifferenceType __gnu_parallel::__equally_split_point (_DifferenceType __n, _ThreadIndex __num_threads, _ThreadIndex __thread_no)`

function to split a sequence into parts of almost equal size.

Returns the position of the splitting point between thread number `__thread_no` (included) and thread number `__thread_no+1` (excluded).

Parameters

| | |
|----------------------------|--------------------|
| <code>__n</code> | Number of elements |
| <code>__num_threads</code> | Number of parts |
| <code>__thread_no</code> | Number of threads |

Returns

splitting point

Definition at line 75 of file `equally_split.h`.

Referenced by `__for_each_template_random_access_ed()`.

3.6.4.8 `template<typename _Tp> _Tp __gnu_parallel::__fetch_and_add (volatile _Tp* __ptr, _Tp __addend) [inline]`

Add a value to a variable, atomically.

Parameters

| | |
|-----------------------|------------------------------|
| <code>__ptr</code> | Pointer to a signed integer. |
| <code>__addend</code> | Value to add. |

Definition at line 74 of file `parallel/compatibility.h`.

Referenced by `__parallel_partition()`, and `__gnu_parallel::__RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter> >::push_front()`.

3.6.4.9 `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_template (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector) [inline]`

Parallel `std::find`, switch for different algorithms.

Parameters

| | |
|-------------------------|--|
| <code>__begin1</code> | Begin iterator of first sequence. |
| <code>__end1</code> | End iterator of first sequence. |
| <code>__begin2</code> | Begin iterator of second sequence. Must have same length as first sequence. |
| <code>__pred</code> | Find predicate. |
| <code>__selector</code> | <code>_Functionality</code> (e. g. <code>std::find_if()</code> , <code>std::equal()</code> ,...) |

Returns

Place of finding in both sequences.

Definition at line 60 of file `find.h`.

References `__gnu_parallel::_Settings::get()`, and `std::make_pair()`.

3.6.4.10 `template<typename _RAIter1 , typename _RAIter2 , typename _Pred , typename _Selector > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_template (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector, equal_split_tag)`

Parallel `std::find`, equal splitting variant.

Parameters

| | |
|-------------------------|--|
| <code>__begin1</code> | Begin iterator of first sequence. |
| <code>__end1</code> | End iterator of first sequence. |
| <code>__begin2</code> | Begin iterator of second sequence. Second <code>__sequence</code> must have same length as first sequence. |
| <code>__pred</code> | Find predicate. |
| <code>__selector</code> | <code>_Functionality</code> (e. g. <code>std::find_if()</code> , <code>std::equal()</code> ,...) |

Returns

Place of finding in both sequences.

Definition at line 97 of file `find.h`.

References `__equally_split()`, and `_GLIBCXX_CALL`.

3.6.4.11 `template<typename _RAIter1 , typename _RAIter2 , typename _Pred , typename _Selector > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_template (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector, growing_blocks_tag)`

Parallel `std::find`, growing block size variant.

Parameters

| | |
|-----------------------|--|
| <code>__begin1</code> | Begin iterator of first sequence. |
| <code>__end1</code> | End iterator of first sequence. |
| <code>__begin2</code> | Begin iterator of second sequence. Second <code>__sequence</code> must have same length as first sequence. |
| <code>__pred</code> | Find predicate. |

| | |
|-------------------------|--|
| <code>__selector</code> | <code>_Functionality</code> (e. g. <code>std::find_if()</code> , <code>std::equal()</code> ,...) |
|-------------------------|--|

Returns

Place of finding in both sequences.

See Also

`__gnu_parallel::Settings::find_sequential_search_size`
`__gnu_parallel::Settings::find_scale_factor`

There are two main differences between the growing blocks and the constant-size blocks variants. 1. For GB, the block size grows; for CSB, the block size is fixed. 2. For GB, the blocks are allocated dynamically; for CSB, the blocks are allocated in a predetermined manner, namely spacial round-robin.

Definition at line 185 of file `find.h`.

References `_GLIBCXX_CALL`, `__gnu_parallel::Settings::find_scale_factor`, `__gnu_parallel::Settings::find_sequential_search_size`, and `__gnu_parallel::Settings::get()`.

```
3.6.4.14 template<typename _RAIter, typename _Op, typename _Fu, typename _Red, typename _Result> _Op
__gnu_parallel::__for_each_template_random_access_ed( _RAIter __begin, _RAIter __end, _Op __o, _Fu & __f, _Red __r,
_Result __base, _Result & __output, typename std::iterator_traits<_RAIter>::difference_type __bound )
```

Embarrassingly parallel algorithm for random access iterators, using hand-crafted parallelization by equal splitting the work.

Parameters

| | |
|-----------------------|--|
| <code>__begin</code> | Begin iterator of element sequence. |
| <code>__end</code> | End iterator of element sequence. |
| <code>__o</code> | User-supplied functor (comparator, predicate, adding functor, ...) |
| <code>__f</code> | Functor to "process" an element with <code>__op</code> (depends on desired functionality, e. g. for <code>std::for_each()</code> , ...). |
| <code>__r</code> | Functor to "add" a single <code>__result</code> to the already processed elements (depends on functionality). |
| <code>__base</code> | Base value for reduction. |
| <code>__output</code> | Pointer to position where final result is written to |
| <code>__bound</code> | Maximum number of elements processed (e. g. for <code>std::count_n()</code>). |

Returns

User-supplied functor (that may contain a part of the result).

Definition at line 67 of file `par_loop.h`.

References `__equally_split_point()`.

Referenced by `__for_each_template_random_access()`.

| <code>__base</code> | Base value for reduction. |
| <code>__output</code> | Pointer to position where final result is written to |
| <code>__bound</code> | Maximum number of elements processed (e. g. for <code>std::count_n()</code>). |

Returns

User-supplied functor (that may contain a part of the result).

Definition at line 66 of file `omp_loop_static.h`.

```
3.6.4.17 template<typename _RAIter , typename _Op , typename _Fu , typename _Red , typename _Result > _Op
__gnu_parallel::__for_each_template_random_access_workstealing ( _RAIter __begin, _RAIter __end, _Op __op, _Fu &
__f, _Red __r, _Result __base, _Result & __output, typename std::iterator_traits< _RAIter >::difference_type __bound )
```

Work stealing algorithm for random access iterators.

Uses $O(1)$ additional memory. Synchronization at job lists is done with atomic operations.

Parameters

| | |
|-----------------------|---|
| <code>__begin</code> | Begin iterator of element sequence. |
| <code>__end</code> | End iterator of element sequence. |
| <code>__op</code> | User-supplied functor (comparator, predicate, adding functor, ...). |
| <code>__f</code> | Functor to <i>process</i> an element with <code>__op</code> (depends on desired functionality, e. g. for <code>std::for_each()</code> , ...). |

3.6.4.18 `template<typename _lIter, typename _Compare> bool __gnu_parallel::__is_sorted (_lIter __begin, _lIter __end, _Compare __comp)`

Check whether `[__begin, __end)` is sorted according to `__comp`.

Parameters

| | |
|----------------------|-----------------------------|
| <code>__begin</code> | Begin iterator of sequence. |
| <code>__end</code> | End iterator of sequence. |
| <code>__comp</code> | Comparator. |

Returns

`true` if sorted, `false` otherwise.

Definition at line 51 of file `checkers.h`.

Referenced by `__sequential_multiway_merge()`, `multiway_merge_loser_tree_sentinel()`, and `parallel_multiway_merge()`.

3.6.4.19 `template<typename _RAIter, typename _Compare> _RAIter __gnu_parallel::__median_of_three_iterators (_RAIter __a, _RAIter __b, _RAIter __c, _Compare __comp)`

Compute the median of three referenced elements, according to `__comp`.

Parameters

| | |
|------------------|------------------|
| <code>__a</code> | First iterator. |
| <code>__b</code> | Second iterator. |
| <code>__c</code> | Third iterator. |

| | |
|---------------------|-------------|
| <code>__comp</code> | Comparator. |
|---------------------|-------------|

Definition at line 398 of file parallel/base.h.

Referenced by `__qsb_divide()`.

```
3.6.4.20 template<typename _RAIter1 , typename _RAIter2 , typename _OutputIterator , typename _DifferenceTp , typename
        _Compare > _OutputIterator __gnu_parallel::_merge_advance ( _RAIter1 & __begin1, _RAIter1 __end1, _RAIter2 &
        __begin2, _RAIter2 __end2, _OutputIterator __target, _DifferenceTp __max_length, _Compare __comp ) [inline]
```

Merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant. Static switch on whether to use the conditional-move variant.

Parameters

| | |
|---------------------------|--------------------------------------|
| <code>__begin1</code> | Begin iterator of first sequence. |
| <code>__end1</code> | End iterator of first sequence. |
| <code>__begin2</code> | Begin iterator of second sequence. |
| <code>__end2</code> | End iterator of second sequence. |
| <code>__target</code> | Target begin iterator. |
| <code>__max_length</code> | Maximum number of elements to merge. |
| <code>__comp</code> | Comparator. |

Returns

Output end iterator.

Definition at line 171 of file merge.h.

References `__merge_advance_movc()`, and `_GLIBCXX_CALL`.

Referenced by `__parallel_merge_advance()`, and `__sequential_multiway_merge()`.

```
3.6.4.21 template<typename _RAIter1 , typename _RAIter2 , typename _OutputIterator , typename _DifferenceTp , typename
        _Compare > _OutputIterator __gnu_parallel::_merge_advance_movc ( _RAIter1 & __begin1, _RAIter1 __end1, _RAIter2 &
        __begin2, _RAIter2 __end2, _OutputIterator __target, _DifferenceTp __max_length, _Compare __comp )
```

Merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant. Specially designed code should allow the compiler to generate conditional moves instead of branches.

Parameters

| | |
|---------------------------|--------------------------------------|
| <code>__begin1</code> | Begin iterator of first sequence. |
| <code>__end1</code> | End iterator of first sequence. |
| <code>__begin2</code> | Begin iterator of second sequence. |
| <code>__end2</code> | End iterator of second sequence. |
| <code>__target</code> | Target begin iterator. |
| <code>__max_length</code> | Maximum number of elements to merge. |
| <code>__comp</code> | Comparator. |

Returns

Output end iterator.

Definition at line 105 of file merge.h.

Referenced by `__merge_advance()`.

```
3.6.4.22 template<typename _RAIter1 , typename _RAIter2 , typename _OutputIterator , typename _DifferenceTp , typename
        _Compare > _OutputIterator __gnu_parallel::__merge_advance_usual ( _RAIter1 & __begin1, _RAIter1 __end1, _RAIter2 &
        __begin2, _RAIter2 __end2, _OutputIterator __target, _DifferenceTp __max_length, _Compare __comp )
```

Merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant.

Parameters

| | |
|---------------------------|--------------------------------------|
| <code>__begin1</code> | Begin iterator of first sequence. |
| <code>__end1</code> | End iterator of first sequence. |
| <code>__begin2</code> | Begin iterator of second sequence. |
| <code>__end2</code> | End iterator of second sequence. |
| <code>__target</code> | Target begin iterator. |
| <code>__max_length</code> | Maximum number of elements to merge. |
| <code>__comp</code> | Comparator. |

Returns

Output end iterator.

Definition at line 57 of file `merge.h`.

```
3.6.4.23 template<typename _RAIter1 , typename _RAIter2 , typename _RAIter3 , typename _Compare > _RAIter3
        __gnu_parallel::__parallel_merge_advance ( _RAIter1 & __begin1, _RAIter1 __end1, _RAIter2 & __begin2, _RAIter2
        __end2, _RAIter3 __target, typename std::iterator_traits< _RAIter1 >::difference_type __max_length, _Compare __comp
        ) [inline]
```

Merge routine fallback to sequential in case the iterators of the two input sequences are of different type.

Parameters

| | |
|---------------------------|--------------------------------------|
| <code>__begin1</code> | Begin iterator of first sequence. |
| <code>__end1</code> | End iterator of first sequence. |
| <code>__begin2</code> | Begin iterator of second sequence. |
| <code>__end2</code> | End iterator of second sequence. |
| <code>__target</code> | Target begin iterator. |
| <code>__max_length</code> | Maximum number of elements to merge. |
| <code>__comp</code> | Comparator. |

Returns

Output end iterator.

Definition at line 195 of file `merge.h`.

References `__merge_advance()`.

```
3.6.4.24 template<typename _RAIter1 , typename _RAIter3 , typename _Compare > _RAIter3 __gnu_parallel::__parallel_merge -
        advance ( _RAIter1 & __begin1, _RAIter1 __end1, _RAIter1 & __begin2, _RAIter1 __end2, _RAIter3 __target, typename
        std::iterator_traits< _RAIter1 >::difference_type __max_length, _Compare __comp ) [inline]
```

Parallel merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant. The functionality is projected onto `parallel_multiway_merge`.

Parameters

| | |
|---------------------------|--------------------------------------|
| <code>__begin1</code> | Begin iterator of first sequence. |
| <code>__end1</code> | End iterator of first sequence. |
| <code>__begin2</code> | Begin iterator of second sequence. |
| <code>__end2</code> | End iterator of second sequence. |
| <code>__target</code> | Target begin iterator. |
| <code>__max_length</code> | Maximum number of elements to merge. |
| <code>__comp</code> | Comparator. |

Returns

Output end iterator.

Definition at line 223 of file `merge.h`.

References `std::make_pair()`, `multiway_merge_exact_splitting()`, and `parallel_multiway_merge()`.

3.6.4.25 `template<typename _RAIter, typename _Compare> void __gnu_parallel::__parallel_nth_element (_RAIter __begin, _RAIter __nth, _RAIter __end, _Compare __comp)`

Parallel implementation of `std::nth_element()`.

Parameters

| | |
|----------------------|--|
| <code>__begin</code> | Begin iterator of input sequence. |
| <code>__nth</code> | Iterator of element that must be in position afterwards. |
| <code>__end</code> | End iterator of input sequence. |
| <code>__comp</code> | Comparator. |

3.6.4.26 `template<typename _RAIter, typename _Compare> void __gnu_parallel::__parallel_partial_sort (_RAIter __begin, _RAIter __middle, _RAIter __end, _Compare __comp)`

Parallel implementation of `std::partial_sort()`.

Parameters

| | |
|-----------------------|-----------------------------------|
| <code>__begin</code> | Begin iterator of input sequence. |
| <code>__middle</code> | Sort until this position. |
| <code>__end</code> | End iterator of input sequence. |
| <code>__comp</code> | Comparator. |

Definition at line 422 of file `partition.h`.

References `__parallel_nth_element()`.

3.6.4.27 `template<typename _Iter, typename _OutputIterator, typename _BinaryOperation> _OutputIterator __gnu_parallel::__parallel_partial_sum (_Iter __begin, _Iter __end, _OutputIterator __result, _BinaryOperation __bin_op)`

Parallel partial sum front-__end.

Parameters

| | |
|-----------------------|------------------------------------|
| <code>__begin</code> | Begin iterator of input sequence. |
| <code>__end</code> | End iterator of input sequence. |
| <code>__result</code> | Begin iterator of output sequence. |
| <code>__bin_op</code> | Associative binary function. |

Returns

End iterator of output sequence.

Definition at line 205 of file `partial_sum.h`.

References `__parallel_partial_sum_linear()`, `_GLIBCXX_CALL`, and `__gnu_parallel::_Settings::get()`.

```
3.6.4.28 template<typename _Iter , typename _OutputIterator , typename _BinaryOperation > _OutputIterator
__gnu_parallel::_parallel_partial_sum_basecase ( _Iter __begin, _Iter __end, _OutputIterator __result, _BinaryOperation
__bin_op, typename std::iterator_traits< _Iter >::value_type __value )
```

Base case prefix sum routine.

Parameters

| | |
|-----------------------|--|
| <code>__begin</code> | Begin iterator of input sequence. |
| <code>__end</code> | End iterator of input sequence. |
| <code>__result</code> | Begin iterator of output sequence. |
| <code>__bin_op</code> | Associative binary function. |
| <code>__value</code> | Start value. Must be passed since the neutral element is unknown in general. |

Returns

End iterator of output sequence.

Definition at line 58 of file `partial_sum.h`.

Referenced by `__parallel_partial_sum_linear()`.

```
3.6.4.29 template<typename _Iter , typename _OutputIterator , typename _BinaryOperation > _OutputIterator
__gnu_parallel::_parallel_partial_sum_linear ( _Iter __begin, _Iter __end, _OutputIterator __result, _BinaryOperation
__bin_op, typename std::iterator_traits< _Iter >::difference_type __n )
```

Parallel partial sum implementation, two-phase approach, no recursion.

Parameters

| | |
|-----------------------|------------------------------------|
| <code>__begin</code> | Begin iterator of input sequence. |
| <code>__end</code> | End iterator of input sequence. |
| <code>__result</code> | Begin iterator of output sequence. |
| <code>__bin_op</code> | Associative binary function. |
| <code>__n</code> | Length of sequence. |

Returns

End iterator of output sequence.

Definition at line 89 of file `partial_sum.h`.

3.6.4.50 `template<typename _RandomNumberGenerator> int __gnu_parallel::__random_number_pow2 (int __logp,`
`_RandomNumberGenerator & __rng) [inline]`

Generate a random number in $[0, 2^{\text{__logp}})$.

Parameters

| | |
|---------------------|---|
| <code>__logp</code> | Logarithm (basis 2) of the upper range <code>__bound</code> . |
| <code>__rng</code> | Random number generator to use. |

Definition at line 115 of file `random_shuffle.h`.

Referenced by `__parallel_random_shuffle_drs_pu()`, and `__sequential_random_shuffle()`.

3.6.4.51 `template<typename _Size> _Size __gnu_parallel::__rd_log2 (_Size __n) [inline]`

Calculates the rounded-down logarithm of `__n` for base 2.

Parameters

| | |
|------------------|-----------|
| <code>__n</code> | Argument. |
|------------------|-----------|

Returns

Returns 0 for any argument <1.

Definition at line 102 of file `parallel/base.h`.

3.6.4.54 `template<bool __stable, bool __sentinels, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare> _RAIter3 __gnu_parallel::__sequential_multiway_merge (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator >::value_type::first_type >::value_type & __sentinel, _DifferenceTp __length, _Compare __comp)`

Sequential multi-way merging switch.

The `_GLIBCXX_PARALLEL_DECISION` is based on the branching factor and runtime settings.

Parameters

| | |
|---------------------------|---|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence. |
| <code>__seqs_end</code> | End iterator of iterator pair input sequence. |
| <code>__target</code> | Begin iterator of output sequence. |
| <code>__comp</code> | Comparator. |
| <code>__length</code> | Maximum length to merge, possibly larger than the number of elements available. |
| <code>__sentinel</code> | The sequences have <code>__a</code> sentinel element. |

Returns

End iterator of output sequence.

Definition at line 920 of file `multiway_merge.h`.

3.6.4.58 `void __gnu_parallel::__yield() [inline]`

Yield control to another thread, without waiting for the end of the time slice.

Definition at line 121 of file `parallel/compatibility.h`.

Referenced by `__for_each_template_random_access_workstealing()`, and `__qsb_local_sort_with_helping()`.

3.6.4.59 `template<typename _Iter, typename _FunctorType> size_t __gnu_parallel::list_partition(const _Iter __begin, const _Iter __end, _Iter * __starts, size_t * __lengths, const int __num_parts, _FunctorType & __f, int __oversampling = 0)`

Splits a sequence given by input iterators into parts of almost equal size.

The function needs only one pass over the sequence.

Parameters

| | |
|-----------------------------|--|
| <code>__begin</code> | Begin iterator of input sequence. |
| <code>__end</code> | End iterator of input sequence. |
| <code>__starts</code> | Start iterators for the resulting parts, dimension <code>__num_parts+1</code> . For convenience, <code>__starts[__num_parts]</code> contains the end iterator of the sequence. |
| <code>__lengths</code> | Length of the resulting parts. |
| <code>__num_parts</code> | Number of parts to split the sequence into. |
| <code>__f</code> | Functor to be applied to each element by traversing <code>__it</code> |
| <code>__oversampling</code> | Oversampling factor. If 0, then the partitions will differ in at most $\{ \{ _end \} - \{ _begin \} \} _ - elements$. Otherwise, the ratio between the longest and the shortest part is bounded by $1 / (\{ _ - oversampling \} \{ num \})$ |

Returns

Length of the whole sequence.

Definition at line 101 of file `list_partition.h`.

References `__shrink_and_double()`, and `std::vector<_Tp, _Alloc >::size()`.

3.6.4.60 `template<typename _Tp> const _Tp& __gnu_parallel::max(const _Tp & __a, const _Tp & __b) [inline]`

Equivalent to `std::max`.

Definition at line 150 of file `parallel/base.h`.

3.6.4.61 `template<typename _Tp> const _Tp& __gnu_parallel::min(const _Tp & __a, const _Tp & __b) [inline]`

Equivalent to `std::min`.

Definition at line 144 of file `parallel/base.h`.

Referenced by `__for_each_template_random_access_workstealing()`.

```

3.6.4.62 template<typename _RanSeqs , typename _RankType , typename _RankIterator , typename
        _Compare > void __gnu_parallel::multiseq_partition ( _RanSeqs __begin_seqs, _RanSeqs
        __end_seqs, _RankType __rank, _RankIterator __begin_offsets, _Compare __comp =
        std::less< typename std::iterator_traits<typename std::iterator-
        _traits<_RanSeqs>::value_type:: first_type>::value_type>()
        )

```

Splits several sorted sequences at a certain global `__rank`, resulting in a splitting point for each sequence. The sequences are passed via a sequence of random-access iterator pairs, none of the sequences may be empty. If there are several equal elements across the split, the ones on the `__left` side will be chosen from sequences with smaller number.

Parameters

| | |
|------------------------------|--|
| <code>__begin_seqs</code> | Begin of the sequence of iterator pairs. |
| <code>__end_seqs</code> | End of the sequence of iterator pairs. |
| <code>__rank</code> | The global rank to partition at. |
| <code>__begin_offsets</code> | A random-access <code>__sequence</code> <code>__begin</code> where the <code>__result</code> will be stored in. Each element of the sequence is an iterator that points to the first element on the greater part of the respective <code>__sequence</code> . |
| <code>__comp</code> | The ordering functor, defaults to <code>std::less<_Tp></code> . |

Definition at line 122 of file `multiseq_selection.h`.

```

3.6.4.63 template<typename _Tp , typename _RanSeqs , typename _RankType , typename _Compare > _Tp
        __gnu_parallel::multiseq_selection ( _RanSeqs __begin_seqs, _RanSeqs __end_seqs, _RankType __rank, _RankType &
        __offset, _Compare __comp = std::less<_Tp>() )

```

Selects the element at a certain global `__rank` from several sorted sequences.

The sequences are passed via a sequence of random-access iterator pairs, none of the sequences may be empty.

Parameters

| | |
|---------------------------|--|
| <code>__begin_seqs</code> | Begin of the sequence of iterator pairs. |
| <code>__end_seqs</code> | End of the sequence of iterator pairs. |
| <code>__rank</code> | The global rank to partition at. |
| <code>__offset</code> | The rank of the selected element in the global subsequence of elements equal to the selected element. If the selected element is unique, this number is 0. |
| <code>__comp</code> | The ordering functor, defaults to <code>std::less</code> . |

Definition at line 388 of file `multiseq_selection.h`.

```
3.6.4.64 template<typename _RAIterPairIterator, typename _RAIterOut, typename _DifferenceTp, typename _Compare >
        _RAIterOut __gnu_parallel::multiway_merge ( _RAIterPairIterator __seqs_begin, _RAIterPairIterator __seqs_end,
        _RAIterOut __target, _DifferenceTp __length, _Compare __comp, __gnu_parallel::sequential_tag )
```

Multiway Merge Frontend.

Merge the sequences specified by `seqs_begin` and `__seqs_end` into `__target`. `__seqs_begin` and `__seqs_end` must point to a sequence of pairs. These pairs must contain an iterator to the beginning of a sequence in their first entry and an iterator to the `_M_end` of the same sequence in their second entry.

Ties are broken arbitrarily. See `stable_multiway_merge` for a variant that breaks ties by sequence number but is slower.

The first entries of the pairs (i.e. the begin iterators) will be moved forward.

The output sequence has to provide enough space for all elements that are written to it.

This function will merge the input sequences:

- not stable
- parallel, depending on the input size and Settings
- using sampling for splitting
- not using sentinels

Example:

```
int sequences[10][10];
for (int __i = 0; __i < 10; ++__i)
    for (int __j = 0; __j < 10; ++__j)
        sequences[__i][__j] = __j;

int __out[33];
std::vector<std::pair<int*> > seqs;
for (int __i = 0; __i < 10; ++__i)
    { seqs.push(std::make_pair<int*>(sequences[__i],
                                    sequences[__i] + 10)) }

multiway_merge(seqs.begin(), seqs.end(), __target, std::less<int>(), 33);
```

See Also

`stable_multiway_merge`

Precondition

All input sequences must be sorted.

Target must provide enough space to merge out length elements or the number of elements in all sequences, whichever is smaller.

Postcondition

`[__target, return __value)` contains merged `__elements` from the input sequences.

`return __value - __target = min(__length, number of elements in all sequences).`

Template Parameters

| | |
|-----------------------------------|--|
| <code>__RAIterPairIterator</code> | iterator over sequence of pairs of iterators |
| <code>__RAIterOut</code> | iterator over target sequence |
| <code>__DifferenceTp</code> | difference type for the sequence |
| <code>__Compare</code> | strict weak ordering type to compare elements in sequences |

Parameters

| | |
|---------------------------|---|
| <code>__seqs_begin</code> | __begin of sequence __sequence |
| <code>__seqs_end</code> | __M_end of sequence __sequence |
| <code>__target</code> | target sequence to merge to. |
| <code>__comp</code> | strict weak ordering to use for element comparison. |
| <code>__length</code> | Maximum length to merge, possibly larger than the number of elements available. |

Returns

`__M_end` iterator of output sequence

Definition at line 1418 of file `multiway_merge.h`.

References `__sequential_multiway_merge()`, and `_GLIBCXX_CALL`.

```
3.6.4.65  template<template< typename RAI, typename C > class iterator, typename __RAIterIterator , typename __RAIter3 , typename
        __DifferenceTp , typename __Compare > __RAIter3 __gnu_parallel::multiway_merge_3_variant ( __RAIterIterator __seqs_begin,
        __RAIterIterator __seqs_end, __RAIter3 __target, __DifferenceTp __length, __Compare __comp )
```

Highly efficient 3-way merging procedure.

Merging is done with the algorithm implementation described by Peter Sanders. Basically, the idea is to minimize the number of necessary comparison after merging an element. The implementation trick that makes this fast is that the order of the sequences is stored in the instruction pointer (translated into labels in C++).

This works well for merging up to 4 sequences.

Note that making the merging stable does *not* come at a performance hit.

Whether the merging is done guarded or unguarded is selected by the used iterator class.

Parameters

| | |
|---------------------------|--|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence. |
| <code>__seqs_end</code> | End iterator of iterator pair input sequence. |
| <code>__target</code> | Begin iterator of output sequence. |
| <code>__comp</code> | Comparator. |
| <code>__length</code> | Maximum length to merge, less equal than the total number of elements available. |

Returns

End iterator of output sequence.

Definition at line 241 of file `multiway_merge.h`.

References `_GLIBCXX_CALL`.

```
3.6.4.66  template<template< typename RAI, typename C > class iterator, typename __RAIterIterator , typename __RAIter3 , typename
        __DifferenceTp , typename __Compare > __RAIter3 __gnu_parallel::multiway_merge_4_variant ( __RAIterIterator __seqs_begin,
        __RAIterIterator __seqs_end, __RAIter3 __target, __DifferenceTp __length, __Compare __comp )
```

Highly efficient 4-way merging procedure.

Merging is done with the algorithm implementation described by Peter Sanders. Basically, the idea is to minimize the number of necessary comparison after merging an element. The implementation trick that makes this fast is that the order of the sequences is stored in the instruction pointer (translated into goto labels in C++).

This works well for merging up to 4 sequences.

Note that making the merging stable does *not* come at a performance hit.

Whether the merging is done guarded or unguarded is selected by the used iterator class.

Parameters

| | |
|---------------------------|--|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence. |
| <code>__seqs_end</code> | End iterator of iterator pair input sequence. |
| <code>__target</code> | Begin iterator of output sequence. |
| <code>__comp</code> | Comparator. |
| <code>__length</code> | Maximum length to merge, less equal than the total number of elements available. |

Returns

End iterator of output sequence.

Definition at line 360 of file `multiway_merge.h`.

References `_GLIBCXX_CALL`.

```
3.6.4.67 template<bool __stable, typename _RAIter, typename _Compare, typename _DifferenceType > void
    __gnu_parallel::multiway_merge_exact_splitting ( _RAIter __seqs_begin, _RAIter __seqs_end,
    _DifferenceType __length, _DifferenceType __total_length, _Compare __comp, std::vector< std::pair<
    _DifferenceType, _DifferenceType > > * __pieces )
```

Exact splitting for parallel multiway-merge routine.

None of the passed sequences may be empty.

Definition at line 1120 of file `multiway_merge.h`.

References `__equally_split()`, `_GLIBCXX_PARALLEL_LENGTH`, `std::vector< _Tp, _Alloc >::begin()`, `std::vector< _Tp, _Alloc >::end()`, `multiseq_partition()`, and `std::vector< _Tp, _Alloc >::resize()`.

```
3.6.4.68 template<typename _LT, typename _RAIter, typename _RAIter3, typename _DifferenceTp, typename _Compare >
    _RAIter3 __gnu_parallel::multiway_merge_loser_tree ( _RAIter __seqs_begin, _RAIter __seqs_end, _RAIter3
    __target, _DifferenceTp __length, _Compare __comp )
```

Multi-way merging procedure for a high branching factor, guarded case.

This merging variant uses a `LoserTree` class as selected by `_LT`.

Stability is selected through the used `LoserTree` class `_LT`.

At least one non-empty sequence is required.

Parameters

| | |
|---------------------------|---|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence. |
| <code>__seqs_end</code> | End iterator of iterator pair input sequence. |

| | |
|-----------------------|--|
| <code>__target</code> | Begin iterator of output sequence. |
| <code>__comp</code> | Comparator. |
| <code>__length</code> | Maximum length to merge, less equal than the total number of elements available. |

Returns

End iterator of output sequence.

Definition at line 491 of file `multiway_merge.h`.

References `_GLIBCXX_CALL`, and `_GLIBCXX_PARALLEL_LENGTH`.

```
3.6.4.69 template<typename UnguardedLoserTree, typename _RAIterliterator, typename _RAIter3, typename _DifferenceTp,
typename _Compare > _RAIter3 __gnu_parallel::multiway_merge_loser_tree_sentinel ( _RAIterliterator __seqs_begin,
_RAIterliterator __seqs_end, _RAIter3 __target, const typename std::iterator_traits< typename std::iterator_traits<
_RAIterliterator >::value_type::first_type >::value_type & __sentinel, _DifferenceTp __length, _Compare __comp )
```

Multi-way merging procedure for a high branching factor, requiring sentinels to exist.

Template Parameters

| | |
|---------------------------|--|
| <i>UnguardedLoserTree</i> | <code>_Loser Tree</code> variant to use for the unguarded merging. |
|---------------------------|--|

Parameters

| | |
|---------------------------|--|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence. |
| <code>__seqs_end</code> | End iterator of iterator pair input sequence. |
| <code>__target</code> | Begin iterator of output sequence. |
| <code>__comp</code> | Comparator. |
| <code>__length</code> | Maximum length to merge, less equal than the total number of elements available. |

Returns

End iterator of output sequence.

Definition at line 662 of file `multiway_merge.h`.

References `__is_sorted()`, and `_GLIBCXX_CALL`.

```
3.6.4.70 template<typename _LT, typename _RAIterliterator, typename _RAIter3, typename _DifferenceTp, typename _Compare
> _RAIter3 __gnu_parallel::multiway_merge_loser_tree_unguarded ( _RAIterliterator __seqs_begin, _RAIterliterator
__seqs_end, _RAIter3 __target, const typename std::iterator_traits< typename std::iterator_traits< _RAIterliterator
>::value_type::first_type >::value_type & __sentinel, _DifferenceTp __length, _Compare __comp )
```

Multi-way merging procedure for a high branching factor, unguarded case.

Merging is done using the `LoserTree` class `_LT`.

Stability is selected by the used `LoserTrees`.

Precondition

No input will run out of elements during the merge.

Parameters

| | |
|---------------------------|--|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence. |
| <code>__seqs_end</code> | End iterator of iterator pair input sequence. |
| <code>__target</code> | Begin iterator of output sequence. |
| <code>__comp</code> | Comparator. |
| <code>__length</code> | Maximum length to merge, less equal than the total number of elements available. |

Returns

End iterator of output sequence.

Definition at line 574 of file `multiway_merge.h`.

References `_GLIBCXX_CALL`.

```
3.6.4.71 template<bool __stable, typename _RAIterIterator, typename _Compare, typename _DifferenceType > void
__gnu_parallel::multiway_merge_sampling_splitting ( _RAIterIterator __seqs_begin, _RAIterIterator __seqs_end,
_DifferenceType __length, _DifferenceType __total_length, _Compare __comp, std::vector< std::pair<
_DifferenceType, _DifferenceType > > * __pieces )
```

Sampling based splitting for parallel multiway-merge routine.

Definition at line 1035 of file `multiway_merge.h`.

References `_GLIBCXX_PARALLEL_LENGTH`, `__gnu_parallel::_Settings::get()`, and `__gnu_parallel::_Settings::merge_oversampling`.

```
3.6.4.72 template<typename _RAIterPairIterator, typename _RAIterOut, typename _DifferenceTp, typename _Compare >
_RAIterOut __gnu_parallel::multiway_merge_sentinels ( _RAIterPairIterator __seqs_begin, _RAIterPairIterator __seqs_end,
_RAIterOut __target, _DifferenceTp __length, _Compare __comp, __gnu_parallel::sequential_tag )
```

Multiway Merge Frontend.

Merge the sequences specified by `seqs_begin` and `__seqs_end` into `__target`. `__seqs_begin` and `__seqs_end` must point to a sequence of pairs. These pairs must contain an iterator to the beginning of a sequence in their first entry and an iterator the `_M_end` of the same sequence in their second entry.

Ties are broken arbitrarily. See `stable_multiway_merge` for a variant that breaks ties by sequence number but is slower.

The first entries of the pairs (i.e. the begin iterators) will be moved forward accordingly.

The output sequence has to provide enough space for all elements that are written to it.

This function will merge the input sequences:

- not stable
- parallel, depending on the input size and Settings
- using sampling for splitting
- using sentinels

You have to take care that the element the `_M_end` iterator points to is readable and contains a value that is greater than any other non-sentinel value in all sequences.

Example:

```
int sequences[10][11];
```

```

for (int __i = 0; __i < 10; ++__i)
    for (int __j = 0; __i < 11; ++__j)
        sequences[__i][__j] = __j; // __last one is sentinel!

int __out[33];
std::vector<std::pair<int*> > seqs;
for (int __i = 0; __i < 10; ++__i)
    { seqs.push(std::make_pair<int*>(sequences[__i],
                                     sequences[__i] + 10)) }

multiway_merge(seqs.begin(), seqs.end(), __target, std::less<int>(), 33);

```

Precondition

All input sequences must be sorted.

Target must provide enough space to merge out length elements or the number of elements in all sequences, whichever is smaller.

For each `__i`, `__seqs_begin[__i].second` must be the end marker of the sequence, but also reference the one more `__sentinel` element.

Postcondition

`[__target, return __value)` contains merged `__elements` from the input sequences.

`return __value - __target = min(__length, number of elements in all sequences).`

See Also

`stable_multiway_merge_sentinels`

Template Parameters

| | |
|----------------------------------|--|
| <code>_RAIterPairIterator</code> | iterator over sequence of pairs of iterators |
| <code>_RAIterOut</code> | iterator over target sequence |
| <code>_DifferenceTp</code> | difference type for the sequence |
| <code>_Compare</code> | strict weak ordering type to compare elements in sequences |

Parameters

| | |
|---------------------------|---|
| <code>__seqs_begin</code> | <code>__begin</code> of sequence <code>__sequence</code> |
| <code>__seqs_end</code> | <code>_M_end</code> of sequence <code>__sequence</code> |
| <code>__target</code> | target sequence to merge to. |
| <code>__comp</code> | strict weak ordering to use for element comparison. |
| <code>__length</code> | Maximum length to merge, possibly larger than the number of elements available. |

Returns

`_M_end` iterator of output sequence

Definition at line 1782 of file `multiway_merge.h`.

References `__sequential_multiway_merge()`, and `_GLIBCXX_CALL`.

3.6.4.73 `template<bool __stable, bool __sentinels, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Splitter, typename _Compare> _RAIter3 __gnu_parallel::parallel_multiway_merge (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, _Splitter __splitter, _DifferenceTp __length, _Compare __comp, _ThreadIndex __num_threads)`

Parallel multi-way merge routine.

The `_GLIBCXX_PARALLEL_DECISION` is based on the branching factor and runtime settings.

Must not be called if the number of sequences is 1.

Template Parameters

| | |
|-------------------------|--|
| <code>__splitter</code> | functor to split input (either <code>__exact</code> or sampling based) |
| <code>__stable</code> | Stable merging incurs a performance penalty. |
| <code>__sentinel</code> | Ignored. |

Parameters

| | |
|---------------------------|---|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence. |
| <code>__seqs_end</code> | End iterator of iterator pair input sequence. |
| <code>__target</code> | Begin iterator of output sequence. |
| <code>__comp</code> | Comparator. |
| <code>__length</code> | Maximum length to merge, possibly larger than the number of elements available. |

Returns

End iterator of output sequence.

Definition at line 1225 of file `multiway_merge.h`.

References `__is_sorted()`, `_GLIBCXX_CALL`, `_GLIBCXX_PARALLEL_LENGTH`, `__gnu_parallel::_Settings::get()`, `std::make_pair()`, and `__gnu_parallel::_Settings::merge_oversampling`.

3.8.1 Detailed Description

GNU profile code for public use.

3.8.2 Typedef Documentation

3.8.2.1 `typedef std::unordered_map<std::string, std::string> __gnu_profile::__env_t`

Internal environment. Values can be set one of two ways: 1. In config file "var = value". The default config file path is `libstdc++-profile.conf`. 2. By setting process environment variables. For instance, in a Bash shell you can set the unit cost of iterating through a map like this: `export __map_iterate_cost_factor=5.0`. If a value is set both in the input file and through an environment variable, the environment value takes precedence.

Definition at line 65 of file `profiler_trace.h`.

3.8.3 Function Documentation

3.8.3.1 `bool __gnu_profile::__profcxx_init() [inline]`

This function must be called by each instrumentation point.

The common path is inlined fully.

Definition at line 649 of file `profiler_trace.h`.

3.8.3.2 `void __gnu_profile::__report(void) [inline]`

Final report method, registered with `atexit`.

This can also be called directly by user code, including signal handlers. It is protected against deadlocks by the reentrance guard in `profiler.h`. However, when called from a signal handler that triggers while within `__gnu_profile` (under the guarded zone), no output will be produced.

Definition at line 440 of file `profiler_trace.h`.

References `std::min()`.

3.8.3.3 `__gnu_profile::__GLIBCXX_PROFILE_DEFINE_UNINIT_DATA(__gnu_cxx::__mutex , __global_lock)`

Master lock.

3.9 `__gnu_sequential` Namespace Reference

3.9.1 Detailed Description

GNU sequential classes for public use.

3.10 `abi` Namespace Reference

3.10.1 Detailed Description

The cross-vendor C++ Application Binary Interface. A namespace alias to `__cxxabiv1`, but user programs should use the alias 'abi'. A brief overview of an ABI is given in the `libstdc++` FAQ, question 5.8 (you may have a copy of the FAQ locally, or you can view the online version at http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#5_8).

GCC subscribes to a cross-vendor ABI for C++, sometimes called the IA64 ABI because it happens to be the native ABI for that platform. It is summarized at <http://www.codesourcery.com/cxx-abi/> along with the current specification.

For users of GCC greater than or equal to 3.x, entry points are available in `<cxxabi.h>`, which notes, *'It is not normally necessary for user programs to include this header, or use the entry points directly. However, this header is available should that be needed.'*

3.11 std Namespace Reference

- `constexpr try_to_lock_t try_to_lock`

Standard Stream Objects

The `<iostream>` header declares the eight standard stream objects. For other declarations, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch24.html> and the *I/O forward declarations*

They are required by default to cooperate with the global C library's *FILE* streams, and to be available during program startup and termination. For more information, see the *HOWTO* linked to above.

- `istream cin`
- `ostream cout`
- `ostream cerr`
- `ostream clog`
- `wistream wcin`
- `wostream wcout`
- `wostream wcerr`
- `wostream wclog`

3.11.1 Detailed Description

ISO C++ entities toplevel namespace is std.

3.11.2 Typedef Documentation

3.11.2.1 `template<bool _Cache> using std::__umap_traits = typedef __detail::_Hashtable_traits<_Cache, false, true>`

Base types for `unordered_map`.

Definition at line 39 of file `unordered_map.h`.

3.11.2.2 `template<bool _Cache> using std::__ummap_traits = typedef __detail::_Hashtable_traits<_Cache, false, false>`

Base types for `unordered_multimap`.

Definition at line 56 of file `unordered_map.h`.

3.11.2.3 `template<bool _Cache> using std::__umset_traits = typedef __detail::_Hashtable_traits<_Cache, true, false>`

Base types for `unordered_multiset`.

Definition at line 54 of file `unordered_set.h`.

3.11.2.4 `template<bool _Cache> using std::__uset_traits = typedef __detail::_Hashtable_traits<_Cache, true, true>`

Base types for `unordered_set`.

Definition at line 39 of file `unordered_set.h`.

3.11.2.5 `typedef void(* std::new_handler)()`

If you write your own error handler to be called by `new`, it must be of this type.

Definition at line 105 of file `new`.

3.11.2.6 `typedef long long std::streamoff`

Type used by `fpos`, `char_traits<char>`, and `char_traits<wchar_t>`.

In clauses 21.1.3.1 and 27.4.1 `streamoff` is described as an implementation defined type. Note: In versions of GCC up to and including GCC 3.3, `streamoff` was `typedef long`.

Definition at line 94 of file `postypes.h`.

3.11.2.7 `typedef fpos<mbstate_t> std::streampos`

File position for char streams.

Definition at line 228 of file `postypes.h`.

3.11.2.8 `typedef ptrdiff_t std::streamsize`

Integral type for I/O operation counts and buffer sizes.

Definition at line 98 of file `postypes.h`.

3.11.2.9 `typedef fpos<mbstate_t> std::u16streampos`

File position for `char16_t` streams.

Definition at line 234 of file `postypes.h`.

3.11.2.10 `typedef fpos<mbstate_t> std::u32streampos`

File position for `char32_t` streams.

Definition at line 236 of file postypes.h.

3.11.2.11 typedef fpos<mbstate_t> std::wstreampos

File position for wchar_t streams.

Definition at line 230 of file postypes.h.

3.11.3 Enumeration Type Documentation

3.11.3.1 anonymous enum

Todo Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html> This controls some aspect of the sort routines.

Definition at line 1874 of file stl_algo.h.

3.11.3.2 enum std::float_denorm_style

Describes the denormalization for floating-point types.

These values represent the presence or absence of a variable number of exponent bits. This type is used in the std::numeric_limits class.

Enumerator

denorm_indeterminate Indeterminate at compile time whether denormalized values are allowed.

denorm_absent The type does not allow denormalized values.

denorm_present The type allows denormalized values.

Definition at line 171 of file limits.

3.11.3.3 enum std::float_round_style

Describes the rounding style for floating-point types.

This is used in the std::numeric_limits class.

Enumerator

round_toward_zero Intermediate.

round_to_nearest To zero.

round_toward_infinity To the nearest representable value.

round_toward_neg_infinity To infinity.

Definition at line 156 of file limits.

3.11.4 Function Documentation

3.11.4.1 template<typename _RandomAccessIterator, typename _Compare> void std::__final_insertion_sort (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)

This is a helper function for the sort routine.

Definition at line 1879 of file stl_algo.h.

References __insertion_sort(), and __unguarded_insertion_sort().

3.11.4.2 `template<typename _InputIterator , typename _Predicate > _InputIterator std::__find_if (_InputIterator __first, _InputIterator __last, _Predicate __pred, input_iterator_tag) [inline]`

This is an overload used by find algos for the Input Iterator case.

Definition at line 101 of file `stl_algo.h`.

Referenced by `__find_if_not()`, `__search_n_aux()`, `find()`, and `find_if()`.

3.11.4.3 `template<typename _RandomAccessIterator , typename _Predicate > _RandomAccessIterator std::__find_if (_RandomAccessIterator __first, _RandomAccessIterator __last, _Predicate __pred, random_access_iterator_tag)`

This is an overload used by find algos for the RAI case.

Definition at line 112 of file `stl_algo.h`.

3.11.4.4 `template<typename _InputIterator , typename _Predicate > _InputIterator std::__find_if_not (_InputIterator __first, _InputIterator __last, _Predicate __pred) [inline]`

Provided for `stable_partition` to use.

Definition at line 168 of file `stl_algo.h`.

References `__find_if()`, and `__iterator_category()`.

Referenced by `find_if_not()`.

3.11.4.5 `template<typename _InputIterator , typename _Predicate , typename _Distance > _InputIterator std::__find_if_not_n (_InputIterator __first, _Distance & __len, _Predicate __pred)`

Like `find_if_not()`, but uses and updates a count of the remaining range length instead of comparing against an end iterator.

Definition at line 181 of file `stl_algo.h`.

Referenced by `__inplace_stable_partition()`, and `__stable_partition_adaptive()`.

3.11.4.6 `template<typename _EuclideanRingElement > _EuclideanRingElement std::__gcd (_EuclideanRingElement __m, _EuclideanRingElement __n)`

This is a helper function for the rotate algorithm specialized on RAIs. It returns the greatest common divisor of two integer values.

Definition at line 1229 of file `stl_algo.h`.

3.11.4.7 `template<typename _RandomAccessIterator , typename _Compare > void std::__heap_select (_RandomAccessIterator __first, _RandomAccessIterator __middle, _RandomAccessIterator __last, _Compare __comp)`

This is a helper function for the sort routines.

Definition at line 1669 of file `stl_algo.h`.

3.11.4.8 `template<typename _ForwardIterator , typename _Predicate , typename _Distance > _ForwardIterator std::__inplace_stable_partition (_ForwardIterator __first, _Predicate __pred, _Distance __len)`

This is a helper function... Requires `__len != 0` and `!__pred(*__first)`, same as `__stable_partition_adaptive`.

Definition at line 1519 of file `stl_algo.h`.

References `__find_if_not_n()`, `advance()`, `distance()`, and `rotate()`.

3.11.4.9 `template<typename _RandomAccessIterator, typename _Compare> void std::__inplace_stable_sort (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)`

This is a helper function for the stable sorting routines.

Definition at line 2771 of file `stl_algo.h`.

References `__insertion_sort()`, and `__merge_without_buffer()`.

3.11.4.10 `template<typename _RandomAccessIterator, typename _Compare> void std::__insertion_sort (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)`

This is a helper function for the sort routine.

Definition at line 1839 of file `stl_algo.h`.

References `__unguarded_linear_insert()`.

Referenced by `__final_insertion_sort()`, and `__inplace_stable_sort()`.

3.11.4.11 `template<typename _RandomAccessIterator, typename _Size, typename _Compare> void std::__introsort_loop (_RandomAccessIterator __first, _RandomAccessIterator __last, _Size __depth_limit, _Compare __comp)`

This is a helper function for the sort routine.

Definition at line 1939 of file `stl_algo.h`.

References `__unguarded_partition_pivot()`.

3.11.4.12 `template<typename _Functor, typename... _Args> enable_if< (is_member_pointer<_Functor>::value && is_function<_Functor>::value && is_function<typename remove_pointer<_Functor>::type>::value), typename result_of<_Functor&(_Args&&...)>::type>::type std::__invoke (_Functor & __f, _Args &&... __args) [inline]`

Invoke a function object, which may be either a member pointer or a function object. The first parameter will tell which.

Definition at line 200 of file `functional`.

3.11.4.13 `constexpr int std::__lg (int __n) [inline]`

This is a helper function for the sort routines and for `random.tcc`.

Definition at line 1006 of file `stl_algbase.h`.

Referenced by `nth_element()`, `std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType>::operator()`, and `std::linear_congruential_engine<_UIntType, __a, __c, __m>::seed()`.

3.11.4.14 `template<typename _BidirectionalIterator, typename _Distance, typename _Pointer, typename _Compare> void std::__merge_adaptive (_BidirectionalIterator __first, _BidirectionalIterator __middle, _BidirectionalIterator __last, _Distance __len1, _Distance __len2, _Pointer __buffer, _Distance __buffer_size, _Compare __comp)`

This is a helper function for the merge routines.

Definition at line 2431 of file `stl_algo.h`.

References `__move_merge_adaptive()`, `__move_merge_adaptive_backward()`, `__rotate_adaptive()`, `advance()`, and `distance()`.

3.11.4.15 `template<typename _BidirectionalIterator, typename _Distance, typename _Compare> void std::__merge_without_buffer (_BidirectionalIterator __first, _BidirectionalIterator __middle, _BidirectionalIterator __last, _Distance __len1, _Distance __len2, _Compare __comp)`

This is a helper function for the merge routines.

Definition at line 2491 of file `stl_algo.h`.

References `advance()`, `distance()`, `iter_swap()`, and `rotate()`.

Referenced by `__inplace_stable_sort()`.

3.11.4.16 `template<typename _Iterator, typename _Compare> void std::__move_median_to_first (_Iterator __result, _Iterator __a, _Iterator __b, _Iterator __c, _Compare __comp)`

Swaps the median value of `*__a`, `*__b` and `*__c` under `__comp` to `*__result`.

Definition at line 78 of file `stl_algo.h`.

References `iter_swap()`.

Referenced by `__unguarded_partition_pivot()`.

3.11.4.17 `template<typename _InputIterator, typename _OutputIterator, typename _Compare> _OutputIterator std::__move_merge (_InputIterator __first1, _InputIterator __last1, _InputIterator __first2, _InputIterator __last2, _OutputIterator __result, _Compare __comp)`

This is a helper function for the `__merge_sort_loop` routines.

Definition at line 2649 of file `stl_algo.h`.

3.11.4.18 `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare> void std::__move_merge_adaptive (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result, _Compare __comp)`

This is a helper function for the `__merge_adaptive` routines.

Definition at line 2320 of file `stl_algo.h`.

Referenced by `__merge_adaptive()`.

3.11.4.19 `template<typename _BidirectionalIterator1, typename _BidirectionalIterator2, typename _BidirectionalIterator3, typename _Compare> void std::__move_merge_adaptive_backward (_BidirectionalIterator1 __first1, _BidirectionalIterator1 __last1, _BidirectionalIterator2 __first2, _BidirectionalIterator2 __last2, _BidirectionalIterator3 __result, _Compare __comp)`

This is a helper function for the `__merge_adaptive` routines.

Definition at line 2346 of file `stl_algo.h`.

Referenced by `__merge_adaptive()`.

3.11.4.20 `template<typename _ForwardIterator, typename _Predicate> _ForwardIterator std::__partition (_ForwardIterator __first, _ForwardIterator __last, _Predicate __pred, forward_iterator_tag)`

This is a helper function...

Definition at line 1462 of file `stl_algo.h`.

References `iter_swap()`.

Referenced by `partition()`.

3.11.4.21 `template<typename _BidirectionalIterator, typename _Predicate> _BidirectionalIterator std::__partition (_BidirectionalIterator __first, _BidirectionalIterator __last, _Predicate __pred, bidirectional_iterator_tag)`

This is a helper function...

Definition at line 1487 of file `stl_algo.h`.

References `iter_swap()`.

3.11.4.22 `template<typename _BidirectionalIterator > void std::__reverse (_BidirectionalIterator __first, _BidirectionalIterator __last, bidirectional_iterator_tag)`

This is an uglified `reverse(_BidirectionalIterator, _BidirectionalIterator)` overloaded for bidirectional iterators.

Definition at line 1129 of file `stl_algo.h`.

References `iter_swap()`.

Referenced by `__rotate()`, and `reverse()`.

3.11.4.23 `template<typename _RandomAccessIterator > void std::__reverse (_RandomAccessIterator __first, _RandomAccessIterator __last, random_access_iterator_tag)`

This is an uglified `reverse(_BidirectionalIterator, _BidirectionalIterator)` overloaded for random access iterators.

Definition at line 1149 of file `stl_algo.h`.

References `iter_swap()`.

3.11.4.24 `template<typename _ForwardIterator > void std::__rotate (_ForwardIterator __first, _ForwardIterator __middle, _ForwardIterator __last, forward_iterator_tag)`

This is a helper function for the rotate algorithm.

Definition at line 1243 of file `stl_algo.h`.

References `iter_swap()`.

Referenced by `__gnu_cxx::bitmap_allocator< typename >::M_deallocate_single_object()`, and `rotate()`.

3.11.4.25 `template<typename _BidirectionalIterator > void std::__rotate (_BidirectionalIterator __first, _BidirectionalIterator __middle, _BidirectionalIterator __last, bidirectional_iterator_tag)`

This is a helper function for the rotate algorithm.

Definition at line 1279 of file `stl_algo.h`.

References `__reverse()`, and `iter_swap()`.

3.11.4.26 `template<typename _RandomAccessIterator > void std::__rotate (_RandomAccessIterator __first, _RandomAccessIterator __middle, _RandomAccessIterator __last, random_access_iterator_tag)`

This is a helper function for the rotate algorithm.

Definition at line 1309 of file `stl_algo.h`.

References `iter_swap()`, and `swap_ranges()`.

3.11.4.27 `template<typename _BidirectionalIterator1, typename _BidirectionalIterator2, typename _Distance > _BidirectionalIterator1 std::__rotate_adaptive (_BidirectionalIterator1 __first, _BidirectionalIterator1 __middle, _BidirectionalIterator1 __last, _Distance __len1, _Distance __len2, _BidirectionalIterator2 __buffer, _Distance __buffer_size)`

This is a helper function for the merge routines.

Definition at line 2389 of file `stl_algo.h`.

References `advance()`, `distance()`, and `rotate()`.

Referenced by `__merge_adaptive()`.

```
3.11.4.28 template<typename _ForwardIterator, typename _Integer, typename _UnaryPredicate > _ForwardIterator
std::__search_n_aux ( _ForwardIterator __first, _ForwardIterator __last, _Integer __count, _UnaryPredicate
__unary_pred, std::forward_iterator_tag )
```

This is an helper function for `search_n` overloaded for forward iterators.

Definition at line 257 of file `stl_algo.h`.

References `__find_if()`.

```
3.11.4.29 template<typename _RandomAccessIter, typename _Integer, typename _UnaryPredicate > _RandomAccessIter
std::__search_n_aux ( _RandomAccessIter __first, _RandomAccessIter __last, _Integer __count, _UnaryPredicate
__unary_pred, std::random_access_iterator_tag )
```

This is an helper function for `search_n` overloaded for random access iterators.

Definition at line 289 of file `stl_algo.h`.

```
3.11.4.30 template<typename _ForwardIterator, typename _Pointer, typename _Predicate, typename _Distance > _ForwardIterator
std::__stable_partition_adaptive ( _ForwardIterator __first, _ForwardIterator __last, _Predicate __pred, _Distance __len,
_PPointer __buffer, _Distance __buffer_size )
```

This is a helper function... Requires `__first != __last` and `!__pred(__first)` and `__len == distance(__first, __last)`.

`!__pred(__first)` allows us to guarantee that we don't move-assign an element onto itself.

Definition at line 1551 of file `stl_algo.h`.

References `__find_if_not_n()`, `advance()`, `distance()`, and `rotate()`.

```
3.11.4.31 template<typename _RandomAccessIterator, typename _Compare > void std::__unguarded_insertion_sort (
_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp ) [inline]
```

This is a helper function for the sort routine.

Definition at line 1862 of file `stl_algo.h`.

References `__unguarded_linear_insert()`.

Referenced by `__final_insertion_sort()`.

```
3.11.4.32 template<typename _RandomAccessIterator, typename _Compare > void std::__unguarded_linear_insert (
_RandomAccessIterator __last, _Compare __comp )
```

This is a helper function for the sort routine.

Definition at line 1820 of file `stl_algo.h`.

Referenced by `__insertion_sort()`, and `__unguarded_insertion_sort()`.

```
3.11.4.33 template<typename _RandomAccessIterator, typename _Compare > _RandomAccessIterator std::__unguarded_partition
( _RandomAccessIterator __first, _RandomAccessIterator __last, _RandomAccessIterator __pivot, _Compare __comp )
```

This is a helper function...

Definition at line 1895 of file `stl_algo.h`.

References `iter_swap()`.

Referenced by `__unguarded_partition_pivot()`.

```
3.11.4.34 template<typename _RandomAccessIterator, typename _Compare> _RandomAccessIterator
std::__unguarded_partition_pivot( _RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp )
[inline]
```

This is a helper function...

Definition at line 1916 of file `stl_algo.h`.

References `__move_median_to_first()`, and `__unguarded_partition()`.

Referenced by `__introsort_loop()`.

```
3.11.4.35 template<typename _ForwardIterator, typename _OutputIterator, typename _BinaryPredicate> _OutputIterator
std::__unique_copy( _ForwardIterator __first, _ForwardIterator __last, _OutputIterator __result, _BinaryPredicate
__binary_pred, forward_iterator_tag, output_iterator_tag )
```

This is an uglified `unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate)` overloaded for forward iterators and output iterator as result.

Definition at line 1046 of file `stl_algo.h`.

Referenced by `unique_copy()`.

```
3.11.4.36 template<typename _InputIterator, typename _OutputIterator, typename _BinaryPredicate> _OutputIterator
std::__unique_copy( _InputIterator __first, _InputIterator __last, _OutputIterator __result, _BinaryPredicate
__binary_pred, input_iterator_tag, output_iterator_tag )
```

This is an uglified `unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate)` overloaded for input iterators and output iterator as result.

Definition at line 1075 of file `stl_algo.h`.

```
3.11.4.37 template<typename _InputIterator, typename _ForwardIterator, typename _BinaryPredicate> _ForwardIterator
std::__unique_copy( _InputIterator __first, _InputIterator __last, _ForwardIterator __result, _BinaryPredicate
__binary_pred, input_iterator_tag, forward_iterator_tag )
```

This is an uglified `unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate)` overloaded for input iterators and forward iterator as result.

Definition at line 1107 of file `stl_algo.h`.

```
3.11.4.38 template<typename _T1, typename... _Args> void std::__Construct( _T1* __p, _Args&&... __args ) [inline]
```

Constructs an object in existing memory by invoking an allocated object's constructor with an initializer.

Definition at line 74 of file `stl_construct.h`.

```
3.11.4.39 template<typename _Tp> void std::__Destroy( _Tp* __pointer ) [inline]
```

Destroy the object pointed to by a pointer type.

Definition at line 92 of file `stl_construct.h`.

Referenced by `std::deque<_Tp, _Alloc>::M_fill_initialize()`, `std::deque<_Tp, _Alloc>::M_range_initialize()`, `std::vector<_Tp, _Alloc>::operator=()`, `std::vector<_Tp, _Alloc>::reserve()`, and `std::vector<block_type, allocator_type>::~~vector()`.

3.11.4.40 `template<typename _ForwardIterator > void std::_Destroy (_ForwardIterator __first, _ForwardIterator __last)`
`[inline]`

Destroy a range of objects. If the `value_type` of the object has a trivial destructor, the compiler should optimize all of this away, otherwise the objects' destructors must be invoked.

Definition at line 122 of file `stl_construct.h`.

3.11.4.41 `template<typename _ForwardIterator, typename _Allocator > void std::_Destroy (_ForwardIterator __first, _ForwardIterator __last, _Allocator & __alloc)`

Destroy a range of objects using the supplied allocator. For nondefault allocators we do not optimize away invocation of `destroy()` even if `_Tp` has a trivial destructor.

Definition at line 138 of file `stl_construct.h`.

References `__addressof()`.

3.11.4.42 `template<typename _InputIterator, typename _Tp > _Tp std::accumulate (_InputIterator __first, _InputIterator __last, _Tp __init)` `[inline]`

Accumulate values in a range.

Accumulates the values in the range `[first,last)` using `operator+()`. The initial value is `init`. The values are processed in order.

Parameters

| | |
|----------------------|--|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |
| <code>__init</code> | Starting value to add other values to. |

Returns

The final sum.

Definition at line 120 of file `stl_numeric.h`.

Referenced by `__gnu_parallel::__parallel_partial_sum_linear()`.

3.11.4.43 `template<typename _InputIterator, typename _Tp, typename _BinaryOperation > _Tp std::accumulate (_InputIterator __first, _InputIterator __last, _Tp __init, _BinaryOperation __binary_op)` `[inline]`

Accumulate values in a range with operation.

Accumulates the values in the range `[first,last)` using the function object `__binary_op`. The initial value is `__init`. The values are processed in order.

Parameters

| | |
|--------------------------|--|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |
| <code>__init</code> | Starting value to add other values to. |
| <code>__binary_op</code> | Function object to accumulate with. |

Returns

The final sum.

Definition at line 146 of file `stl_numeric.h`.

3.11.4.44 `template<typename _Tp> std::complex<_Tp> std::acos (const std::complex<_Tp> & __z) [inline]`

`acos(__z)` [8.1.2].

Definition at line 1609 of file `complex`.

3.11.4.45 `template<typename _Tp> std::complex<_Tp> std::acosh (const std::complex<_Tp> & __z) [inline]`

`acosh(__z)` [8.1.5].

Definition at line 1725 of file `complex`.

3.11.4.46 `template<typename _InputIterator, typename _OutputIterator> _OutputIterator std::adjacent_difference (_InputIterator __first, _InputIterator __last, _OutputIterator __result)`

Return differences between adjacent values.

Computes the difference between adjacent values in the range `[first,last)` using operator-() and writes the result to `__result`.

Parameters

| | |
|-----------------------|-----------------------|
| <code>__first</code> | Start of input range. |
| <code>__last</code> | End of input range. |
| <code>__result</code> | Output sums. |

Returns

Iterator pointing just beyond the values written to result.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 539. `partial_sum` and `adjacent_difference` should mention requirements

Definition at line 317 of file `stl_numeric.h`.

3.11.4.47 `template<typename _InputIterator, typename _OutputIterator, typename _BinaryOperation> _OutputIterator std::adjacent_difference (_InputIterator __first, _InputIterator __last, _OutputIterator __result, _BinaryOperation __binary_op)`

Return differences between adjacent values.

Computes the difference between adjacent values in the range `[__first,__last)` using the function object `__binary_op` and writes the result to `__result`.

Parameters

| | |
|--------------------------|-----------------------|
| <code>__first</code> | Start of input range. |
| <code>__last</code> | End of input range. |
| <code>__result</code> | Output sum. |
| <code>__binary_op</code> | Function object. |

Returns

Iterator pointing just beyond the values written to result.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 539. `partial_sum` and `adjacent_difference` should mention requirements
Definition at line 360 of file `stl_numeric.h`.

3.11.4.48 `template<typename _InputIterator, typename _Distance> void std::advance (_InputIterator & __i, _Distance __n)`
`[inline]`

A generalization of pointer arithmetic.

Parameters

| | |
|------------------|--|
| <code>__i</code> | An input iterator. |
| <code>__n</code> | The <i>delta</i> by which to change <code>__i</code> . |

Returns

Nothing.

This increments `i` by `n`. For bidirectional and random access iterators, `__n` may be negative, in which case `__i` is decremented.

For random access iterators, this uses their `+` and `-` operations and are constant time. For other iterator classes they are linear time.

Definition at line 173 of file `stl_iterator_base_funcs.h`.

References `__iterator_category()`.

Referenced by `__inplace_stable_partition()`, `__merge_adaptive()`, `__merge_without_buffer()`, `__rotate_adaptive()`, `__stable_partition_adaptive()`, `std::deque<_Tp, _Alloc>::_M_range_initialize()`, `__gnu_pbds::detail::pat_trie_base::_Node_citer<Node, Leaf, Head, Inode, _Cliterator, Iterator, _Alloc>::get_child()`, `__gnu_pbds::detail::pat_trie_base::_Node_iter<Node, Leaf, Head, Inode, _Cliterator, Iterator, _Alloc>::get_child()`, and `partition_point()`.

3.11.4.49 `bool std::all () const` [noexcept]

Tests whether all the bits are on.

Returns

True if all the bits are set.

Definition at line 1327 of file `bitset`.

3.11.4.50 `bool std::any () const` [noexcept]

Tests whether any of the bits are on.

Returns

True if at least one bit is set.

Definition at line 1335 of file `bitset`.

3.11.4.51 `template<typename _Tp> __gnu_cxx::__promote<_Tp>::__type std::arg (_Tp __x)` [inline]

Additional overloads [8.1.9].

Definition at line 1823 of file `complex`.

References `arg()`.

3.11.4.52 `template<typename _Tp> std::complex<_Tp> std::asin (const std::complex<_Tp> &__z)` [inline]

`asin(__z)` [8.1.3].

Definition at line 1645 of file `complex`.

3.11.4.53 `template<typename _Tp> std::complex<_Tp> std::asinh (const std::complex<_Tp> &__z)` [inline]

`asinh(__z)` [8.1.6].

Definition at line 1764 of file `complex`.

3.11.4.54 `template<typename _Tp> std::complex<_Tp> std::atan (const std::complex<_Tp> &__z) [inline]`

`atan(__z)` [8.1.4].

Definition at line 1689 of file `complex`.

3.11.4.55 `template<typename _Tp> std::complex<_Tp> std::atanh (const std::complex<_Tp> &__z) [inline]`

`atanh(__z)` [8.1.7].

Definition at line 1808 of file `complex`.

3.11.4.56 `template<class _Container> auto std::begin (_Container &__cont)-> decltype(__cont.begin()) [inline]`

Return an iterator pointing to the first element of the container.

Parameters

| | |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 48 of file `range_access.h`.

3.11.4.57 `template<class _Container> auto std::begin (const _Container &__cont)-> decltype(__cont.begin()) [inline]`

Return an iterator pointing to the first element of the const container.

Parameters

| | |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 58 of file `range_access.h`.

3.11.4.58 `template<class _Tp, size_t _Nm> _Tp* std::begin (_Tp(&)__arr[_Nm]) [inline]`

Return an iterator pointing to the first element of the array.

Parameters

| | |
|--------------------|--------|
| <code>__arr</code> | Array. |
|--------------------|--------|

Definition at line 87 of file `range_access.h`.

3.11.4.59 `template<class _Tp> constexpr const _Tp* std::begin (initializer_list<_Tp> __ils) [noexcept]`

Return an iterator pointing to the first element of the `initializer_list`.

Parameters

| | |
|--------------------|-------------------|
| <code>__ils</code> | Initializer list. |
|--------------------|-------------------|

Definition at line 89 of file `initializer_list`.

Referenced by `__gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::get_child()`, `std::vector< _Tp, _Alloc >::insert()`, `std::list< _Tp, _Alloc >::merge()`, `std::vector< _Tp, _Alloc >::operator=()`, `std::list< _Tp, _Alloc >::operator=()`, `std::list< _Tp, _Alloc >::remove()`, `std::list< _Tp, _Alloc >::remove_if()`, `std::list< _Tp, _Alloc >::resize()`, `std::list< _Tp, _Alloc >::sort()`, `std::forward_list< _Tp, _Alloc >::unique()`, and `std::list< _Tp, _Alloc >::unique()`.

3.11.4.60 `ios_base& std::boolalpha (ios_base &__base) [inline]`

Calls `base.setf(ios_base::boolalpha)`.

Definition at line 795 of file `ios_base.h`.

References `__gnu_debug::__base()`, and `std::ios_base::boolalpha`.

3.11.4.61 `template<typename _Tp, typename _Tp1, _Lock_policy _Lp> __shared_ptr<_Tp, _Lp> std::const_pointer_cast(const __shared_ptr<_Tp1, _Lp> &__r) [inline], [noexcept]`

`const_pointer_cast`

Definition at line 1320 of file `shared_ptr_base.h`.

3.11.4.62 `size_t std::count() const [noexcept]`

Returns the number of bits which are set.

Definition at line 1288 of file `bitset`.

3.11.4.63 `template<typename _Tp> reference_wrapper<const _Tp> std::cref(const _Tp &__t) [inline], [noexcept]`

Denotes a const reference should be taken to a variable.

Definition at line 449 of file `functional`.

Referenced by `cref()`.

3.11.4.64 `template<typename _Tp> void std::cref(const _Tp &&) [delete]`

Denotes a reference should be taken to a variable.

3.11.4.65 `template<typename _Tp> reference_wrapper<const _Tp> std::cref(reference_wrapper<_Tp> &__t) [inline], [noexcept]`

Partial specialization.

Definition at line 467 of file `functional`.

References `cref()`.

3.11.4.66 `ios_base& std::dec(ios_base &__base) [inline]`

Calls `base.setf(ios_base::dec, ios_base::basefield)`.

Definition at line 933 of file `ios_base.h`.

References `__gnu_debug::__base()`, `std::ios_base::basefield`, `std::ios_base::dec`, and `std::ios_base::setf()`.

Referenced by `operator>>()`.

3.11.4.67 `template<typename _InputIterator> iterator_traits<_InputIterator>::difference_type std::distance(_InputIterator __first, _InputIterator __last) [inline]`

A generalization of pointer arithmetic.

Parameters

| | |
|----------------------|--------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |

Returns

The distance between them.

Returns `n` such that `__first + n == __last`. This requires that `__last` must be reachable from `__first`. Note that `n` may be negative.

For random access iterators, this uses their `+` and `-` operations and are constant time. For other iterator classes they are linear time.

Definition at line 114 of file `stl_iterator_base_funcs.h`.

References `__iterator_category()`.

Referenced by `__inplace_stable_partition()`, `__merge_adaptive()`, `__merge_without_buffer()`, `__rotate_adaptive()`, `__stable_partition_adaptive()`, `std::deque<_Tp, _Alloc>::M_range_initialize()`, `is_heap_until()`, `std::sub_match<_Bi_iter>::length()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_pbds::detail::pat_trie_base::Node_citer<Node, Leaf, Head, Inode, C_iterator, Iterator, _Alloc>::num_children()`, `partition_point()`, `std::match_results<_Bi_iter>::position()`, `__gnu_cxx::random_sample_n()`, and `std::list<__inp, __rebind_inp>::size()`.

3.11.4.68 `template<typename _Tp, typename _Tp1, _Lock_policy _Lp> __shared_ptr<_Tp, _Lp> std::dynamic_pointer_cast (const __shared_ptr<_Tp1, _Lp> &_r) [inline], [noexcept]`

`dynamic_pointer_cast`

Definition at line 1330 of file `shared_ptr_base.h`.

3.11.4.69 `template<class _Container > auto std::end (_Container &__cont)-> decltype(__cont.end()) [inline]`

Return an iterator pointing to one past the last element of the container.

Parameters

| | |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 68 of file `range_access.h`.

3.11.4.70 `template<class _Container > auto std::end (const _Container &__cont)-> decltype(__cont.end()) [inline]`

Return an iterator pointing to one past the last element of the const container.

Parameters

| | |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 78 of file `range_access.h`.

3.11.4.71 `template<class _Tp, size_t _Nm> _Tp* std::end (_Tp(&).__arr[_Nm]) [inline]`

Return an iterator pointing to one past the last element of the array.

Parameters

| | |
|--------------------|--------|
| <code>__arr</code> | Array. |
|--------------------|--------|

Definition at line 97 of file `range_access.h`.

3.11.4.72 `template<class _Tp > constexpr const _Tp* std::end (initializer_list<_Tp> __ils) [noexcept]`

Return an iterator pointing to one past the last element of the `initializer_list`.

Parameters

| | |
|--------------------|-------------------|
| <code>__ifs</code> | Initializer list. |
|--------------------|-------------------|

Definition at line 99 of file `initializer_list`.

Referenced by `std::vector< _Tp, _Alloc >::insert()`, `std::list< _Tp, _Alloc >::merge()`, `std::vector< _Tp, _Alloc >::operator=()`, `std::list< _Tp, _Alloc >::operator=()`, `std::list< _Tp, _Alloc >::remove()`, `std::list< _Tp, _Alloc >::remove_if()`, `std::list< _Tp, _Alloc >::resize()`, `std::forward_list< _Tp, _Alloc >::resize()`, `std::forward_list< _Tp, _Alloc >::unique()`, and `std::list< _Tp, _Alloc >::unique()`.

3.11.4.73 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>& std::endl (basic_ostream<_CharT, _Traits> & __os) [inline]`

Write a newline and flush the stream.

This manipulator is often mistakenly used when a simple newline is desired, leading to poor buffering performance. See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more on this subject.

Definition at line 564 of file `ostream`.

References `flush()`.

3.11.4.74 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>& std::ends (basic_ostream<_CharT, _Traits> & __os) [inline]`

Write a null character into the output sequence.

Null character is `CharT()` by definition. For `CharT` of `char`, this correctly writes the ASCII NUL character string terminator.

Definition at line 576 of file `ostream`.

3.11.4.75 `template<typename _Tp> _Tp std::fabs (const std::complex<_Tp> & __z) [inline]`

`fabs(__z)` [8.1.8].

Definition at line 1817 of file `complex`.

References `abs()`.

3.11.4.76 `ios_base& std::fixed (ios_base & __base) [inline]`

Calls `base.setf(ios_base::fixed, ios_base::floatfield)`.

Definition at line 958 of file `ios_base.h`.

References `__gnu_debug::__base()`, `std::ios_base::fixed`, `std::ios_base::floatfield`, and `std::ios_base::setf()`.

3.11.4.77 `bitset<_Nb>& std::flip () [noexcept]`

Toggles every bit to its opposite value.

Definition at line 1116 of file `bitset`.

3.11.4.78 `bitset<_Nb>& std::flip (size_t __position)`

Toggles a given bit to its opposite value.

Parameters

| | |
|-------------------------|-----------------------|
| <code>__position</code> | The index of the bit. |
|-------------------------|-----------------------|

Exceptions

| | |
|--------------------------------|--|
| <code>std::out_of_range</code> | If <i>pos</i> is bigger the size of the set. |
|--------------------------------|--|

Definition at line 1129 of file `bitset`.

References `_Unchecked_flip()`.

3.11.4.79 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>& std::flush (basic_ostream<_CharT, _Traits> & __os) [inline]`

Flushes the output stream.

This manipulator simply calls the stream's `flush()` member function.

Definition at line 586 of file `ostream`.

Referenced by `endl()`.

3.11.4.80 `template<typename _MoneyT> _Get_money<_MoneyT> std::get_money (_MoneyT & __mon, bool __intl = false) [inline]`

Extended manipulator for extracting money.

Parameters

| | |
|---------------------|---|
| <code>__mon</code> | Either long double or a specialization of <code>basic_string</code> . |
| <code>__intl</code> | A bool indicating whether international format is to be used. |

Sent to a stream object, this manipulator extracts `__mon`.

Definition at line 256 of file `iomanip`.

3.11.4.81 `new_handler std::get_new_handler () [noexcept]`

Return the current new handler.

3.11.4.82 `template<typename _Tp> pair<_Tp*, ptrdiff_t> std::get_temporary_buffer (ptrdiff_t __len) [noexcept]`

Allocates a temporary buffer.

Parameters

| | |
|--------------------|---|
| <code>__len</code> | The number of objects of type <code>Tp</code> . |
|--------------------|---|

Returns

See full description.

Reinventing the wheel, but this time with prettier spokes!

This function tries to obtain storage for `__len` adjacent `Tp` objects. The objects themselves are not constructed, of course. A `pair<>` is returned containing *the buffer's address and capacity (in the units of `sizeof(_Tp)`)*, or a pair of 0 values if no storage can be obtained. Note that the capacity obtained may be less than that requested if the memory is unavailable; you should compare `len` with the `.second` return value.

Provides the `nothrow` exception guarantee.

Definition at line 85 of file `stl_tempbuf.h`.

Referenced by `std::_Temporary_buffer<_ForwardIterator, _Tp>::_Temporary_buffer()`.

3.11.4.83 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> basic_istream< _CharT, _Traits > & std::getline (basic_istream< _CharT, _Traits > & __is, __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > & __str, _CharT __delim)`

Read a line from stream into a string.

Parameters

| | |
|----------------------|--------------------------------|
| <code>__is</code> | Input stream. |
| <code>__str</code> | Buffer to store into. |
| <code>__delim</code> | Character marking end of line. |

Returns

Reference to the input stream.

Stores characters from `__is` into `__str` until `__delim` is found, the end of the stream is encountered, or `str.max_size()` is reached. If `is.width()` is non-zero, that is the limit on the number of characters stored into `__str`. Any previous contents of `__str` are erased. If `delim` was encountered, it is extracted but not stored into `__str`.

Definition at line 627 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::erase()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::max_size()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

3.11.4.84 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> basic_istream<_CharT, _Traits>& std::getline (basic_istream<_CharT, _Traits> & __is, __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base> & __str) [inline]`

Read a line from stream into a string.

Parameters

| | |
|--------------------|-----------------------|
| <code>__is</code> | Input stream. |
| <code>__str</code> | Buffer to store into. |

Returns

Reference to the input stream.

Stores characters from `is` into `__str` until ' ' is found, the end of the stream is encountered, or `str.max_size()` is reached. If `is.width()` is non-zero, that is the limit on the number of characters stored into `__str`. Any previous contents of `__str` are erased. If end of line was encountered, it is extracted but not stored into `__str`.

Definition at line 2676 of file `vstring.h`.

References `getline()`, and `std::basic_ios<_CharT, _Traits>::widen()`.

3.11.4.85 `template<typename _CharT, typename _Traits, typename _Alloc> basic_istream<_CharT, _Traits> & std::getline (basic_istream<_CharT, _Traits> & __is, basic_string<_CharT, _Traits, _Alloc> & __str, _CharT __delim)`

Read a line from stream into a string.

Parameters

| | |
|----------------------|--------------------------------|
| <code>__is</code> | Input stream. |
| <code>__str</code> | Buffer to store into. |
| <code>__delim</code> | Character marking end of line. |

Returns

Reference to the input stream.

Stores characters from `__is` into `__str` until `__delim` is found, the end of the stream is encountered, or `str.max_size()` is reached. Any previous contents of `__str` are erased. If `__delim` is encountered, it is extracted but not stored into `__str`.

Definition at line 1068 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::erase()`, `std::basic_string<_CharT, _Traits, _Alloc>::max_size()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `getline()`.

3.11.4.86 `template<typename _CharT, typename _Traits, typename _Alloc> basic_istream<_CharT, _Traits>& std::getline (basic_istream<_CharT, _Traits> & __is, basic_string<_CharT, _Traits, _Alloc> & __str) [inline]`

Read a line from stream into a string.

Parameters

| | |
|--------------------|-----------------------|
| <code>__is</code> | Input stream. |
| <code>__str</code> | Buffer to store into. |

Returns

Reference to the input stream.

Stores characters from `is` into `__str` until ' ' is found, the end of the stream is encountered, or `str.max_size()` is reached. Any previous contents of `__str` are erased. If end of line is encountered, it is extracted but not stored into `__str`.

Definition at line 2812 of file `basic_string.h`.

References `getline()`, and `std::basic_ios<_CharT, _Traits>::widen()`.

References `getline()`, and `std::basic_ios<_CharT, _Traits>::widen()`.

3.11.4.87 `ios_base& std::hex (ios_base & __base) [inline]`

Calls `base.setf(ios_base::hex, ios_base::basefield)`.

Definition at line 941 of file `ios_base.h`.

References `__gnu_debug::__base()`, `std::ios_base::basefield`, `std::ios_base::hex`, and `std::ios_base::setf()`.

Referenced by `std::regex_traits<_Ch_type>::value()`.

3.11.4.88 `template<typename _InputIterator1, typename _InputIterator2, typename _Tp> _Tp std::inner_product (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _Tp __init) [inline]`

Compute inner product of two ranges.

Starting with an initial value of `__init`, multiplies successive elements from the two ranges and adds each product into the accumulated value using `operator+()`. The values in the ranges are processed in order.

Parameters

| | |
|-----------------------|--|
| <code>__first1</code> | Start of range 1. |
| <code>__last1</code> | End of range 1. |
| <code>__first2</code> | Start of range 2. |
| <code>__init</code> | Starting value to add other values to. |

Returns

The final inner product.

Definition at line 174 of file `stl_numeric.h`.

```
3.11.4.89 template<typename _InputIterator1, typename _InputIterator2, typename _Tp, typename _BinaryOperation1, typename
    _BinaryOperation2 > _Tp std::inner_product ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2,
    _Tp __init, _BinaryOperation1 __binary_op1, _BinaryOperation2 __binary_op2 ) [inline]
```

Compute inner product of two ranges.

Starting with an initial value of `__init`, applies `__binary_op2` to successive elements from the two ranges and accumulates each result into the accumulated value using `__binary_op1`. The values in the ranges are processed in order.

Parameters

| | |
|---------------------------|--|
| <code>__first1</code> | Start of range 1. |
| <code>__last1</code> | End of range 1. |
| <code>__first2</code> | Start of range 2. |
| <code>__init</code> | Starting value to add other values to. |
| <code>__binary_op1</code> | Function object to accumulate with. |
| <code>__binary_op2</code> | Function object to apply to pairs of input values. |

Returns

The final inner product.

Definition at line 206 of file `stl_numeric.h`.

```
3.11.4.90 ios_base& std::internal ( ios_base & __base ) [inline]
```

Calls `base.setf(ios_base::internal, ios_base::adjustfield)`.

Definition at line 908 of file `ios_base.h`.

References `__gnu_debug::__base()`, `std::ios_base::adjustfield`, and `std::ios_base::internal`.

```
3.11.4.91 template<typename _ForwardIterator, typename _Tp > void std::iota ( _ForwardIterator __first, _ForwardIterator __last,
    _Tp __value )
```

Create a range of sequentially increasing values.

For each element in the range `[first,last)` assigns `value` and increments `value` as if by `++value`.

Parameters

| | |
|----------------------|-----------------|
| <code>__first</code> | Start of range. |
| <code>__last</code> | End of range. |
| <code>__value</code> | Starting value. |

Returns

Nothing.

Definition at line 82 of file `stl_numeric.h`.

Based on `operator==`.

Definition at line 2055 of file `stl_deque.h`.

3.11.4.125 `template<typename _Res , typename... _Args> bool std::operator!= (const function< _Res(_Args...)> & __f, nullptr_t) [inline], [noexcept]`

Compares a polymorphic function object wrapper against 0 (the NULL pointer).

Returns

`false` if the wrapper has no target, `true` otherwise

This function will not throw an exception.

Definition at line 2516 of file functional.

```
3.11.4.126 template<typename _Res, typename... _Args> bool std::operator!=( nullptr_t, const function< _Res(_Args...)> & __f
) [inline], [noexcept]
```

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 2522 of file functional.

```
3.11.4.127 template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator!=( const basic_string< _CharT,
_Traits, _Alloc > & __lhs, const basic_string< _CharT, _Traits, _Alloc > & __rhs ) [inline]
```

Test difference of two strings.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Returns

True if `__lhs.compare(__rhs) != 0`. False otherwise.

Definition at line 2551 of file basic_string.h.

```
3.11.4.128 template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator!=( const _CharT * __lhs, const
basic_string< _CharT, _Traits, _Alloc > & __rhs ) [inline]
```

Test difference of C string and string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String. |

Returns

True if `__rhs.compare(__lhs) != 0`. False otherwise.

Definition at line 2563 of file basic_string.h.

```
3.11.4.129 template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator!=( const basic_string< _CharT,
_Traits, _Alloc > & __lhs, const _CharT * __rhs ) [inline]
```

Test difference of string and C string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | String. |
| <code>__rhs</code> | C string. |

Returns

True if `__lhs.compare(__rhs) != 0`. False otherwise.

Definition at line 2575 of file `basic_string.h`.

3.11.4.130 `template<size_t _Nb> bitset<_Nb> std::operator& (const bitset<_Nb> & __x, const bitset<_Nb> & __y)`
`[inline], [noexcept]`

Global bitwise operations on bitsets.

Parameters

| | |
|------------------|---|
| <code>__x</code> | A bitset. |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1426 of file `bitset`.

3.11.4.131 `template<typename _CharT, typename _Traits, typename _Alloc> basic_string<_CharT, _Traits, _Alloc>`
`std::operator+ (const basic_string<_CharT, _Traits, _Alloc> & __lhs, const basic_string<_CharT, _Traits, _Alloc> &`
`__rhs)`

Concatenate two strings.

Parameters

| | |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string. |

Returns

New string with value of `__lhs` followed by `__rhs`.

Definition at line 2384 of file `basic_string.h`.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`.

3.11.4.132 `template<typename _CharT, typename _Traits, typename _Alloc> basic_string<_CharT, _Traits, _Alloc>`
`std::operator+ (const _CharT * __lhs, const basic_string<_CharT, _Traits, _Alloc> & __rhs)`

Concatenate C string and string.

Parameters

| | |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string. |

Returns

New string with value of `__lhs` followed by `__rhs`.

Definition at line 692 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc >::size()`.

3.11.4.133 `template<typename _CharT, typename _Traits, typename _Alloc > basic_string<_CharT, _Traits, _Alloc >
std::operator+ (_CharT __lhs, const basic_string<_CharT, _Traits, _Alloc > & __rhs)`

Concatenate character and string.

Parameters

| | |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string. |

Returns

New string with `__lhs` followed by `__rhs`.

Definition at line 708 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc >::size()`.

3.11.4.134 `template<typename _CharT, typename _Traits, typename _Alloc > basic_string<_CharT, _Traits, _Alloc>
std::operator+ (const basic_string<_CharT, _Traits, _Alloc > & __lhs, const _CharT * __rhs) [inline]`

Concatenate string and C string.

Parameters

| | |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string. |

Returns

New string with `__lhs` followed by `__rhs`.

Definition at line 2421 of file `basic_string.h`.

References `std::basic_string<_CharT, _Traits, _Alloc >::append()`.

3.11.4.135 `template<typename _CharT, typename _Traits, typename _Alloc > basic_string<_CharT, _Traits, _Alloc>
std::operator+ (const basic_string<_CharT, _Traits, _Alloc > & __lhs, _CharT __rhs) [inline]`

Concatenate string and character.

Parameters

| | |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string. |

Returns

New string with `__lhs` followed by `__rhs`.

Definition at line 2437 of file `basic_string.h`.

3.11.4.136 `template<typename _Tp, typename _Seq> bool std::operator< (const stack< _Tp, _Seq> & __x, const stack< _Tp, _Seq> & __y) [inline]`

Stack ordering relation.

Parameters

| | |
|------------------|--|
| <code>__x</code> | A stack. |
| <code>__y</code> | A stack of the same type as <code>x</code> . |

Returns

True iff `x` is lexicographically less than `__y`.

This is an total ordering relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, the elements must be comparable with `<`, and `std::lexicographical_compare()` is usually used to make the determination.

Definition at line 261 of file `stl_stack.h`.

3.11.4.137 `template<typename _Tp, typename _Seq> bool std::operator< (const queue< _Tp, _Seq> & __x, const queue< _Tp, _Seq> & __y) [inline]`

Queue ordering relation.

Parameters

| | |
|------------------|--|
| <code>__x</code> | A queue. |
| <code>__y</code> | A queue of the same type as <code>x</code> . |

Returns

True iff `__x` is lexicographically less than `__y`.

This is an total ordering relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, the elements must be comparable with `<`, and `std::lexicographical_compare()` is usually used to make the determination.

Definition at line 286 of file `stl_queue.h`.

References `std::queue< _Tp, _Sequence >::c`.

3.11.4.138 `template<typename _Key, typename _Compare, typename _Alloc> bool std::operator< (const multiset< _Key, _Compare, _Alloc> & __x, const multiset< _Key, _Compare, _Alloc> & __y) [inline]`

Multiset ordering relation.

Parameters

| | |
|------------------|---|
| <code>__x</code> | A multiset. |
| <code>__y</code> | A multiset of the same type as <code>__x</code> . |

Returns

True iff `__x` is lexicographically less than `__y`.

This is a total ordering relation. It is linear in the size of the sets. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 794 of file `stl_multiset.h`.

3.11.4.139 `template<typename _Key, typename _Compare, typename _Alloc> bool std::operator< (const set< _Key, _Compare, _Alloc> & __x, const set< _Key, _Compare, _Alloc> & __y) [inline]`

Set ordering relation.

Parameters

| | |
|------------------|--|
| <code>__x</code> | A set. |
| <code>__y</code> | A set of the same type as <code>x</code> . |

Returns

True iff `__x` is lexicographically less than `__y`.

This is a total ordering relation. It is linear in the size of the sets. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 810 of file `stl_set.h`.

3.11.4.140 `template<typename _Key, typename _Tp, typename _Compare, typename _Alloc> bool std::operator< (const multimap< _Key, _Tp, _Compare, _Alloc> & __x, const multimap< _Key, _Tp, _Compare, _Alloc> & __y) [inline]`

Multimap ordering relation.

Parameters

| | |
|------------------|---|
| <code>__x</code> | A multimap. |
| <code>__y</code> | A multimap of the same type as <code>__x</code> . |

Returns

True iff `x` is lexicographically less than `y`.

This is a total ordering relation. It is linear in the size of the multimaps. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 920 of file `stl_multimap.h`.

3.11.4.141 `template<typename _Key, typename _Tp, typename _Compare, typename _Alloc> bool std::operator< (const map< _Key, _Tp, _Compare, _Alloc> & __x, const map< _Key, _Tp, _Compare, _Alloc> & __y) [inline]`

Map ordering relation.

Parameters

| | |
|------------------|--|
| <code>__x</code> | A map. |
| <code>__y</code> | A map of the same type as <code>x</code> . |

Returns

True iff `x` is lexicographically less than `y`.

This is a total ordering relation. It is linear in the size of the maps. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 1017 of file `stl_map.h`.

```
3.11.4.142 template<typename _Tp, typename _Alloc > bool std::operator< ( const forward_list< _Tp, _Alloc > & __lx, const
forward_list< _Tp, _Alloc > & __ly ) [inline]
```

Forward list ordering relation.

Parameters

| | |
|-------------------|---|
| <code>__lx</code> | A <code>forward_list</code> . |
| <code>__ly</code> | A <code>forward_list</code> of the same type as <code>__lx</code> . |

Returns

True iff `__lx` is lexicographically less than `__ly`.

This is a total ordering relation. It is linear in the number of elements of the forward lists. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 1365 of file `forward_list.h`.

References `lexicographical_compare()`.

```
3.11.4.143 template<typename _Tp, typename _Alloc > bool std::operator< ( const vector< _Tp, _Alloc > & __x, const vector<
_Tp, _Alloc > & __y ) [inline]
```

Vector ordering relation.

Parameters

| | |
|------------------|---|
| <code>__x</code> | A vector. |
| <code>__y</code> | A vector of the same type as <code>__x</code> . |

Returns

True iff `__x` is lexicographically less than `__y`.

This is a total ordering relation. It is linear in the size of the vectors. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 1522 of file `stl_vector.h`.

References `std::vector< _Tp, _Alloc >::begin()`, `std::vector< _Tp, _Alloc >::end()`, and `lexicographical_compare()`.

3.11.4.144 `template<typename _Tp, typename _Alloc > bool std::operator< (const list<_Tp, _Alloc > &__x, const list<_Tp, _Alloc > &__y) [inline]`

List ordering relation.

Parameters

| | |
|------------------|---|
| <code>__x</code> | A list. |
| <code>__y</code> | A list of the same type as <code>__x</code> . |

Returns

True iff `__x` is lexicographically less than `__y`.

This is a total ordering relation. It is linear in the size of the lists. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 1758 of file `stl_list.h`.

References `lexicographical_compare()`.

3.11.4.145 `template<typename _Tp, typename _Alloc> bool std::operator< (const deque< _Tp, _Alloc> & __x, const deque< _Tp, _Alloc> & __y) [inline]`

Deque ordering relation.

Parameters

| | |
|------------------|--|
| <code>__x</code> | A deque. |
| <code>__y</code> | A deque of the same type as <code>__x</code> . |

Returns

True iff `x` is lexicographically less than `__y`.

This is a total ordering relation. It is linear in the size of the deques. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 2047 of file `stl_deque.h`.

References `lexicographical_compare()`.

3.11.4.146 `template<typename _CharT, typename _Traits, typename _Alloc> bool std::operator< (const basic_string< _CharT, _Traits, _Alloc> & __lhs, const basic_string< _CharT, _Traits, _Alloc> & __rhs) [inline]`

Test if string precedes string.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 2588 of file `basic_string.h`.

References `std::basic_string< _CharT, _Traits, _Alloc>::compare()`.

3.11.4.147 `template<typename _CharT, typename _Traits, typename _Alloc> bool std::operator< (const basic_string< _CharT, _Traits, _Alloc> & __lhs, const _CharT* __rhs) [inline]`

Test if string precedes C string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | String. |
| <code>__rhs</code> | C string. |

Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 2600 of file `basic_string.h`.

3.11.4.148 `template<typename _CharT, typename _Traits, typename _Alloc> bool std::operator< (const _CharT * __lhs, const basic_string<_CharT, _Traits, _Alloc> & __rhs) [inline]`

Test if C string precedes string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String. |

Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 2612 of file `basic_string.h`.

References `std::basic_string<_CharT, _Traits, _Alloc>::compare()`.

3.11.4.149 `template<typename _CharT, typename _Traits, typename _Tp> basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream<_CharT, _Traits> && __os, const _Tp & __x) [inline]`

Generic inserter for rvalue stream.

Parameters

| | |
|-------------------|---|
| <code>__os</code> | An input stream. |
| <code>__x</code> | A reference to the object being inserted. |

Returns

`os`

This is just a forwarding function to allow insertion to rvalue streams since they won't bind to the inserter functions that take an lvalue reference.

Definition at line 602 of file `ostream`.

3.11.4.150 `template<class _Traits> basic_ostream<char, _Traits>& std::operator<< (basic_ostream<char, _Traits> & __out, const char * __s) [inline]`

String inserters.

Parameters

| | |
|--------------------|---------------------|
| <code>__out</code> | An output stream. |
| <code>__s</code> | A character string. |

Returns

`out`

Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 530 of file `ostream`.

References `std::ios_base::badbit`.

3.11.4.151 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream<_CharT, _Traits> &__out, _CharT __c) [inline]`

Character inserters.

Parameters

| | |
|--------------------|-------------------|
| <code>__out</code> | An output stream. |
| <code>__c</code> | A character. |

Returns

`out`

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 471 of file `ostream`.

3.11.4.152 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream<_CharT, _Traits> &__out, char __c) [inline]`

Character inserters.

Parameters

| | |
|--------------------|-------------------|
| <code>__out</code> | An output stream. |
| <code>__c</code> | A character. |

Returns

`out`

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 476 of file `ostream`.

3.11.4.153 `template<class _Traits> basic_ostream<char, _Traits>& std::operator<< (basic_ostream< char, _Traits> & __out, char __c) [inline]`

Character inserters.

Parameters

| | |
|--------------------|-------------------|
| <code>__out</code> | An output stream. |
| <code>__c</code> | A character. |

Returns

`out`

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 482 of file `ostream`.

3.11.4.154 `template<class _Traits> basic_ostream<char, _Traits>& std::operator<< (basic_ostream< char, _Traits> & __out, unsigned char __c) [inline]`

Character inserters.

Parameters

| | |
|--------------------|-------------------|
| <code>__out</code> | An output stream. |
| <code>__c</code> | A character. |

Returns

`out`

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 493 of file `ostream`.

3.11.4.155 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream<_CharT, _Traits> & __out, const _CharT* __s) [inline]`

String inserters.

Parameters

| | |
|--------------------|-------------------|
| <code>__out</code> | An output stream. |
|--------------------|-------------------|

| | |
|------------------|---------------------|
| <code>__s</code> | A character string. |
|------------------|---------------------|

Returns

`out`

Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 513 of file `ostream`.

References `std::ios_base::badbit`.

3.11.4.156 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::operator<< (basic_ostream<_CharT, _Traits> & __out, const char * __s)`

String inserters.

Parameters

| | |
|--------------------|---------------------|
| <code>__out</code> | An output stream. |
| <code>__s</code> | A character string. |

Returns

`out`

Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 321 of file `ostream.tcc`.

References `std::ios_base::badbit`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

3.11.4.157 `template<class _Traits> basic_ostream<char, _Traits> & std::operator<< (basic_ostream<char, _Traits> & __out, const signed char * __s) [inline]`

String inserters.

Parameters

| | |
|--------------------|---------------------|
| <code>__out</code> | An output stream. |
| <code>__s</code> | A character string. |

Returns

`out`

Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 543 of file `ostream`.

3.11.4.158 `template<class _Traits> basic_ostream<char, _Traits>& std::operator<< (basic_ostream< char, _Traits> & __out, const unsigned char* __s) [inline]`

String inserters.

Parameters

| | |
|--------------------|---------------------|
| <code>__out</code> | An output stream. |
| <code>__s</code> | A character string. |

Returns

`out`

Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 548 of file `ostream`.

3.11.4.159 `template<class _Traits> basic_ostream<char, _Traits>& std::operator<< (basic_ostream< char, _Traits> & __out, signed char __c) [inline]`

Character inserters.

Parameters

| | |
|--------------------|-------------------|
| <code>__out</code> | An output stream. |
| <code>__c</code> | A character. |

Returns

`out`

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 488 of file `ostream`.

3.11.4.160 `bitset<_Nb> std::operator<< (size_t __position) const [noexcept]`

Self-explanatory.

Definition at line 1349 of file `bitset`.

3.11.4.161 `template<class _CharT , class _Traits , size_t _Nb> std::basic_ostream<_CharT, _Traits>& std::operator<< (std::basic_ostream< _CharT, _Traits > & __os, const bitset< _Nb > & __x)`

Global I/O operators for bitsets.

Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace, only accept 0 and 1 characters, and will only extract as many digits as the bitset will hold.

Definition at line 1531 of file `bitset`.

References `std::__ctype_abstract_base< _CharT >::widen()`.

3.11.4.162 `template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream< _CharT, _Traits > & __os, const __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]`

Write string to a stream.

Parameters

| | |
|--------------------|----------------------|
| <code>__os</code> | Output stream. |
| <code>__str</code> | String to write out. |

Returns

Reference to the output stream.

Output characters of `__str` into `os` following the same rules as for writing a C string.

Definition at line 2630 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data()`, and `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size()`.

3.11.4.163 `template<typename _CharT , typename _Traits , typename _Alloc > basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream< _CharT, _Traits > & __os, const basic_string< _CharT, _Traits, _Alloc > & __str) [inline]`

Write string to a stream.

Parameters

| | |
|--------------------|----------------------|
| <code>__os</code> | Output stream. |
| <code>__str</code> | String to write out. |

Returns

Reference to the output stream.

Output characters of `__str` into `os` following the same rules as for writing a C string.

Definition at line 2772 of file `basic_string.h`.

3.11.4.164 `bitset<_Nb>& std::operator<= (size_t __position) [noexcept]`

Operations on bitsets.

Parameters

| | |
|-------------------------|--------------------------------|
| <code>__position</code> | The number of places to shift. |
|-------------------------|--------------------------------|

These should be self-explanatory.

Definition at line 994 of file `bitset`.

```
3.11.4.165  template<typename _Tp, typename _Seq> bool std::operator<= ( const stack< _Tp, _Seq> & __x, const stack<

3.11.4.172  template<typename _Tp, typename _Alloc> bool std::operator<= ( const vector< _Tp, _Alloc> & __x, const
    vector< _Tp, _Alloc> & __y )  [inline]
```

Based on `operator<`.

Definition at line 1541 of file `std_vector.h`.

```
3.11.4.173 template<typename _Tp, typename _Alloc > bool std::operator<= ( const list< _Tp, _Alloc > &__x, const list< _Tp,
    _Alloc > &__y ) [inline]
```

Based on `operator<`.

Definition at line 1777 of file `std_list.h`.

```
3.11.4.174 template<typename _Tp, typename _Alloc > bool std::operator<= ( const deque< _Tp, _Alloc > &__x, const deque<
    _Tp, _Alloc > &__y ) [inline]
```

Based on `operator<`.

Definition at line 2069 of file `std_deque.h`.

```
3.11.4.175 template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator<= ( const basic_string< _CharT,
    _Traits, _Alloc > &__lhs, const basic_string< _CharT, _Traits, _Alloc > &__rhs ) [inline]
```

Test if string doesn't follow string.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 2662 of file `basic_string.h`.

References `std::basic_string< _CharT, _Traits, _Alloc >::compare()`.

```
3.11.4.176 template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator<= ( const basic_string< _CharT,
    _Traits, _Alloc > &__lhs, const _CharT *__rhs ) [inline]
```

Test if string doesn't follow C string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | String. |
| <code>__rhs</code> | C string. |

Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 2674 of file `basic_string.h`.

```
3.11.4.177 template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator<= ( const _CharT *__lhs, const
    basic_string< _CharT, _Traits, _Alloc > &__rhs ) [inline]
```

Test if C string doesn't follow string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String. |

Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 2686 of file `basic_string.h`.

References `std::basic_string<_CharT, _Traits, _Alloc>::compare()`.

3.11.4.178 `template<typename _StateT> bool std::operator==(const fpos<_StateT> & __lhs, const fpos<_StateT> & __rhs) [inline]`

Test if equivalent to another position.

Definition at line 216 of file `postypes.h`.

3.11.4.179 `template<typename _Tp, typename _Seq> bool std::operator==(const stack<_Tp, _Seq> & __x, const stack<_Tp, _Seq> & __y) [inline]`

Stack equality comparison.

Parameters

| | |
|------------------|--|
| <code>__x</code> | A stack. |
| <code>__y</code> | A stack of the same type as <code>__x</code> . |

Returns

True iff the size and elements of the stacks are equal.

This is an equivalence relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, and stacks are considered equivalent if their sequences compare equal.

Definition at line 243 of file `stl_stack.h`.

3.11.4.180 `template<typename _Tp> bool std::operator==(const _Fwd_list_iterator<_Tp> & __x, const _Fwd_list_const_iterator<_Tp> & __y) [inline], [noexcept]`

Forward list iterator equality comparison.

Definition at line 257 of file `forward_list.h`.

3.11.4.181 `template<typename _Tp, typename _Seq> bool std::operator==(const queue<_Tp, _Seq> & __x, const queue<_Tp, _Seq> & __y) [inline]`

Queue equality comparison.

Parameters

| | |
|------------------|----------|
| <code>__x</code> | A queue. |
|------------------|----------|

| | |
|------------------|--|
| <code>__y</code> | A queue of the same type as <code>__x</code> . |
|------------------|--|

Returns

True iff the size and elements of the queues are equal.

This is an equivalence relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, and queues are considered equivalent if their sequences compare equal.

Definition at line 268 of file `stl_queue.h`.

References `std::queue<_Tp, _Sequence>::c`.

3.11.4.182 `template<typename _Key, typename _Compare, typename _Alloc> bool std::operator==(const multiset< _Key, _Compare, _Alloc> & __x, const multiset< _Key, _Compare, _Alloc> & __y) [inline]`

Multiset equality comparison.

Parameters

| | |
|------------------|---|
| <code>__x</code> | A multiset. |
| <code>__y</code> | A multiset of the same type as <code>__x</code> . |

Returns

True iff the size and elements of the multisets are equal.

This is an equivalence relation. It is linear in the size of the multisets. Multisets are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 777 of file `stl_multiset.h`.

3.11.4.183 `template<typename _Key, typename _Compare, typename _Alloc> bool std::operator==(const set< _Key, _Compare, _Alloc> & __x, const set< _Key, _Compare, _Alloc> & __y) [inline]`

Set equality comparison.

Parameters

| | |
|------------------|--|
| <code>__x</code> | A set. |
| <code>__y</code> | A set of the same type as <code>x</code> . |

Returns

True iff the size and elements of the sets are equal.

This is an equivalence relation. It is linear in the size of the sets. Sets are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 793 of file `stl_set.h`.

3.11.4.184 `template<typename _Key, typename _Tp, typename _Compare, typename _Alloc> bool std::operator==(const multimap< _Key, _Tp, _Compare, _Alloc> & __x, const multimap< _Key, _Tp, _Compare, _Alloc> & __y) [inline]`

Multimap equality comparison.

Parameters

| | |
|------------------|---|
| <code>__x</code> | A multimap. |
| <code>__y</code> | A multimap of the same type as <code>__x</code> . |

Returns

True iff the size and elements of the maps are equal.

This is an equivalence relation. It is linear in the size of the multimaps. Multimaps are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 903 of file `stl_multimap.h`.

3.11.4.185 `template<typename _Key, typename _Tp, typename _Compare, typename _Alloc > bool std::operator==(const map< _Key, _Tp, _Compare, _Alloc > & __x, const map< _Key, _Tp, _Compare, _Alloc > & __y) [inline]`

Map equality comparison.

Parameters

| | |
|------------------|--|
| <code>__x</code> | A map. |
| <code>__y</code> | A map of the same type as <code>x</code> . |

Returns

True iff the size and elements of the maps are equal.

This is an equivalence relation. It is linear in the size of the maps. Maps are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1000 of file `stl_map.h`.

3.11.4.186 `bool std::operator==(const bitset< _Nb > & __rhs) const [noexcept]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1299 of file `bitset`.

3.11.4.187 `template<typename _Tp, typename _Alloc > bool std::operator==(const forward_list< _Tp, _Alloc > & __lx, const forward_list< _Tp, _Alloc > & __ly)`

Forward list equality comparison.

Parameters

| | |
|-------------------|---|
| <code>__lx</code> | A <code>forward_list</code> |
| <code>__ly</code> | A <code>forward_list</code> of the same type as <code>__lx</code> . |

Returns

True iff the elements of the forward lists are equal.

This is an equivalence relation. It is linear in the number of elements of the forward lists. Deques are considered equivalent if corresponding elements compare equal.

Definition at line 387 of file `forward_list.tcc`.

References `std::forward_list< _Tp, _Alloc >::cbegin()`, and `std::forward_list< _Tp, _Alloc >::cend()`.

```
3.11.4.188  template<typename _Tp, typename _Alloc > bool std::operator==( const vector<_Tp, _Alloc > &__x, const vector<_Tp, _Alloc > &__y )  [inline]
```

Vector equality comparison.

Parameters

| | |
|------------------|---|
| <code>__x</code> | A vector. |
| <code>__y</code> | A vector of the same type as <code>__x</code> . |

Returns

True iff the size and elements of the vectors are equal.

This is an equivalence relation. It is linear in the size of the vectors. Vectors are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1505 of file `std_vector.h`.

References `std::vector<_Tp, _Alloc>::begin()`, `std::vector<_Tp, _Alloc>::end()`, `equal()`, and `std::vector<_Tp, _Alloc>::size()`.

```
3.11.4.189 template<typename _Tp, typename _Alloc > bool std::operator==( const list< _Tp, _Alloc > & __x, const list< _Tp,
    _Alloc > & __y ) [inline]
```

List equality comparison.

Parameters

| | |
|------------------|---|
| <code>__x</code> | A list. |
| <code>__y</code> | A list of the same type as <code>__x</code> . |

Returns

True iff the size and elements of the lists are equal.

This is an equivalence relation. It is linear in the size of the lists. Lists are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1729 of file `std_list.h`.

References `std::list<_Tp, _Alloc>::begin()`, and `std::list<_Tp, _Alloc>::end()`.

```
3.11.4.190 template<typename _Tp, typename _Alloc > bool std::operator==( const deque< _Tp, _Alloc > & __x, const deque<
    _Tp, _Alloc > & __y ) [inline]
```

Deque equality comparison.

Parameters

| | |
|------------------|--|
| <code>__x</code> | A deque. |
| <code>__y</code> | A deque of the same type as <code>__x</code> . |

Returns

True iff the size and elements of the deques are equal.

This is an equivalence relation. It is linear in the size of the deques. Deques are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 2029 of file `std_deque.h`.

References `std::deque<_Tp, _Alloc>::begin()`, `std::deque<_Tp, _Alloc>::end()`, `equal()`, and `std::deque<_Tp, _Alloc>::size()`.

3.11.4.191 `template<typename _Res, typename... _Args> bool std::operator==(const function< _Res(_Args...)> &__f, nullptr_t) [inline], [noexcept]`

Compares a polymorphic function object wrapper against 0 (the NULL pointer).

Returns

`true` if the wrapper has no target, `false` otherwise

This function will not throw an exception.

Definition at line 2498 of file functional.

3.11.4.192 `template<typename _Res, typename... _Args> bool std::operator==(nullptr_t, const function< _Res(_Args...)> &__f) [inline], [noexcept]`

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 2504 of file functional.

3.11.4.193 `template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator==(const basic_string< _CharT, _Traits, _Alloc > &__lhs, const basic_string< _CharT, _Traits, _Alloc > &__rhs) [inline]`

Test equivalence of two strings.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Returns

True if `__lhs.compare(__rhs) == 0`. False otherwise.

Definition at line 2505 of file basic_string.h.

References `std::basic_string< _CharT, _Traits, _Alloc >::compare()`.

3.11.4.194 `template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator==(const _CharT * __lhs, const basic_string< _CharT, _Traits, _Alloc > &__rhs) [inline]`

Test equivalence of C string and string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String. |

Returns

True if `__rhs.compare(__lhs) == 0`. False otherwise.

Definition at line 2526 of file basic_string.h.

References `std::basic_string< _CharT, _Traits, _Alloc >::compare()`.

3.11.4.195 `template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator==(const basic_string< _CharT, _Traits, _Alloc > &__lhs, const _CharT * __rhs) [inline]`

Test equivalence of string and C string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | String. |
| <code>__rhs</code> | C string. |

Returns

True if `__lhs.compare(__rhs) == 0`. False otherwise.

Definition at line 2538 of file `basic_string.h`.

References `std::basic_string<_CharT, _Traits, _Alloc>::compare()`.

3.11.4.196 `template<typename _Tp, typename _Seq> bool std::operator> (const stack<_Tp, _Seq> &__x, const stack<_Tp, _Seq> &__y) [inline]`

_Traits, _Alloc > &__lhs, const basic_string< _CharT, _Traits, _Alloc > &__rhs ) [inline]
```

Test if string doesn't precede string.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Returns

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 2699 of file basic_string.h.

References `std::basic_string< _CharT, _Traits, _Alloc >::compare()`.

```
3.11.4.220 template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator>= ( const basic_string< _CharT,
_Traits, _Alloc > &__lhs, const _CharT *__rhs ) [inline]
```

Test if string doesn't precede C string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | String. |
| <code>__rhs</code> | C string. |

Returns

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 2711 of file basic_string.h.

3.11.4.221 `template<typename _CharT, typename _Traits, typename _Alloc> bool std::operator>= (const _CharT * __lhs, const basic_string<_CharT, _Traits, _Alloc> & __rhs) [inline]`

Test if C string doesn't precede string.

Parameters

| | |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String. |

Returns

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 2723 of file `basic_string.h`.

References `std::basic_string<_CharT, _Traits, _Alloc>::compare()`.

3.11.4.222 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::operator>> (basic_istream<_CharT, _Traits> & __in, _CharT & __c)`

Character extractors.

Parameters

| | |
|-------------------|------------------------|
| <code>__in</code> | An input stream. |
| <code>__c</code> | A character reference. |

Returns

`in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in `__c`. Otherwise, sets failbit in the input stream.

Definition at line 923 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

3.11.4.223 `template<class _Traits> basic_istream<char, _Traits> & std::operator>> (basic_istream<char, _Traits> & __in, unsigned char & __c) [inline]`

Character extractors.

Parameters

| | |
|-------------------|------------------------|
| <code>__in</code> | An input stream. |
| <code>__c</code> | A character reference. |

Returns

`in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in `__c`. Otherwise, sets failbit in the input stream.

Definition at line 727 of file `istream`.

3.11.4.224 `template<class _Traits> basic_istream<char, _Traits> & std::operator>> (basic_istream<char, _Traits> & __in, signed char & __c) [inline]`

Character extractors.

Parameters

| | |
|-------------------|------------------------|
| <code>__in</code> | An input stream. |
| <code>__c</code> | A character reference. |

Returns

`in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in `__c`. Otherwise, sets failbit in the input stream.

Definition at line 732 of file `istream`.

```
3.11.4.225 template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits> & std::operator>> (
    basic_istream< _CharT, _Traits> & __in, _CharT * __s )
```

Character string extractors.

Parameters

| | |
|-------------------|---------------------------------|
| <code>__in</code> | An input stream. |
| <code>__s</code> | A pointer to a character array. |

Returns

`__in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at `__s`. `n` is defined as:

- if `width()` is greater than zero, `n` is `width()` otherwise
- *`n` is the number of elements of the largest array of **
- *`char_type` that can store a terminating `eos`.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- `n-1` characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

Definition at line 955 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::getloc()`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits>::rdbuf()`, `std::basic_ios< _CharT, _Traits>::setstate()`, and `std::ios_base::width()`.

3.11.4.226 `template<> basic_istream<char>& std::operator>> (basic_istream< char > & __in, char * __s)`

Character string extractors.

Parameters

| | |
|-------------------|---------------------------------|
| <code>__in</code> | An input stream. |
| <code>__s</code> | A pointer to a character array. |

Returns

`__in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at `__s`. `n` is defined as:

- if `width()` is greater than zero, `n` is `width()` otherwise
- `n` is *the number of elements of the largest array of **
- *char_type that can store a terminating eos.*
- `[27.6.1.2.3]/6`

Characters are extracted and stored until one of the following happens:

- `n-1` characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

3.11.4.227 `template<class _Traits> basic_istream<char, _Traits>& std::operator>> (basic_istream< char, _Traits> & __in, unsigned char * __s) [inline]`

Character string extractors.

Parameters

| | |
|-------------------|---------------------------------|
| <code>__in</code> | An input stream. |
| <code>__s</code> | A pointer to a character array. |

Returns

`__in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at `__s`. `n` is defined as:

- if `width()` is greater than zero, `n` is `width()` otherwise
- `n` is *the number of elements of the largest array of **
- *char_type that can store a terminating eos.*

- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- $n-1$ characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

Definition at line 774 of file `istream`.

3.11.4.228 `template<class _Traits> basic_istream<char, _Traits>& std::operator>> (basic_istream< char, _Traits> &__in, signed char *__s) [inline]`

Character string extractors.

Parameters

| | |
|-------------------|---------------------------------|
| <code>__in</code> | An input stream. |
| <code>__s</code> | A pointer to a character array. |

Returns

`__in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts up to n characters and stores them into the array starting at `__s`. n is defined as:

- if `width()` is greater than zero, n is `width()` otherwise
- n is *the number of elements of the largest array of **
- *char_type that can store a terminating eos.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- $n-1$ characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

Definition at line 779 of file `istream`.

3.11.4.229 `template<typename _CharT, typename _Traits, typename _Tp> basic_istream<_CharT, _Traits>& std::operator>> (basic_istream<_CharT, _Traits> && __is, _Tp &__x) [inline]`

Generic extractor for rvalue stream.

Parameters

| | |
|-------------------|---------------------------------------|
| <code>__is</code> | An input stream. |
| <code>__x</code> | A reference to the extraction target. |

Returns

is

This is just a forwarding function to allow extraction from rvalue streams since they won't bind to the extractor functions that take an lvalue reference.

Definition at line 872 of file istream.

3.11.4.230 `bitset<_Nb> std::operator>> (size_t __position) const [noexcept]`

Self-explanatory.

Definition at line 1353 of file bitset.

3.11.4.231 `template<class _CharT, class _Traits, size_t _Nb> std::basic_istream<_CharT, _Traits>& std::operator>> (std::basic_istream<_CharT, _Traits> & __is, bitset<_Nb> & __x)`

Global I/O operators for bitsets.

Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace, only accept 0 and 1 characters, and will only extract as many digits as the bitset will hold.

Definition at line 1463 of file bitset.

References `std::basic_string<_CharT, _Traits, _Alloc>::empty()`, `std::basic_string<_CharT, _Traits, _Alloc>::push_back()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_ios<_CharT, _Traits>::widen()`.

3.11.4.232 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> basic_istream<_CharT, _Traits> & std::operator>> (basic_istream<_CharT, _Traits> & __is, _gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base> & __str)`

Read stream into a string.

Parameters

| | |
|--------------------|-----------------------|
| <code>__is</code> | Input stream. |
| <code>__str</code> | Buffer to store into. |

Returns

Reference to the input stream.

Stores characters from `__is` into `__str` until whitespace is found, the end of the stream is encountered, or `str.max_size()` is reached. If `is.width()` is non-zero, that is the limit on the number of characters stored into `__str`. Any previous contents of `__str` are erased.

Definition at line 552 of file vstring.tcc.

References `std::ios_base::getloc()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::ios_base::width()`.

3.11.4.233 `template<typename _CharT, typename _Traits, typename _Alloc> basic_istream<_CharT, _Traits> &
std::operator>> (basic_istream<_CharT, _Traits> & __is, basic_string<_CharT, _Traits, _Alloc> & __str)`

Read stream into a string.

Parameters

| | |
|--------------------|-----------------------|
| <code>__is</code> | Input stream. |
| <code>__str</code> | Buffer to store into. |

Returns

Reference to the input stream.

Stores characters from `__is` into `__str` until whitespace is found, the end of the stream is encountered, or `str.max_size()` is reached. If `is.width()` is non-zero, that is the limit on the number of characters stored into `__str`. Any previous contents of `__str` are erased.

Definition at line 996 of file `basic_string.tcc`.

References `std::basic_string< _CharT, _Traits, _Alloc >::append()`, `std::basic_string< _CharT, _Traits, _Alloc >::erase()`, `std::ios_base::getloc()`, `std::basic_string< _CharT, _Traits, _Alloc >::max_size()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::ios_base::width()`.

3.11.4.234 `bitset<_Nb>& std::operator>=(size_t __position) [noexcept]`

Operations on bitsets.

Parameters

| | |
|-------------------------|--------------------------------|
| <code>__position</code> | The number of places to shift. |
|-------------------------|--------------------------------|

These should be self-explanatory.

Definition at line 1007 of file `bitset`.

3.11.4.235 `constexpr bool std::operator[](size_t __position)`

Array-indexing support.

Parameters

| | |
|-------------------------|--------------------------------------|
| <code>__position</code> | Index into the <code>bitset</code> . |
|-------------------------|--------------------------------------|

Returns

A `bool` for a *const* `bitset`. For non-const `bitsets`, an instance of the reference proxy class.

Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

Definition at line 1156 of file `bitset`.

3.11.4.236 `template<size_t _Nb> bitset<_Nb> std::operator^(const bitset<_Nb> & __x, const bitset<_Nb> & __y) [inline], [noexcept]`

Global bitwise operations on `bitsets`.

Parameters

| | |
|------------------|---|
| <code>__x</code> | A bitset. |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1444 of file `bitset`.

3.11.4.237 `template<size_t _Nb> bitset<_Nb> std::operator| (const bitset<_Nb> & __x, const bitset<_Nb> & __y)`
`[inline], [noexcept]`

Global bitwise operations on bitsets.

Parameters

| | |
|------------------|---|
| <code>__x</code> | A bitset. |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1435 of file `bitset`.

3.11.4.238 `bitset<_Nb> std::operator~ () const` `[noexcept]`

See the no-argument `flip()`.

Definition at line 1137 of file `bitset`.

3.11.4.239 `template<typename _InputIterator, typename _OutputIterator> _OutputIterator std::partial_sum (_InputIterator __first,`
`_InputIterator __last, _OutputIterator __result)`

Return list of partial sums.

Accumulates the values in the range `[first,last)` using the `+` operator. As each successive input value is added into the total, that partial sum is written to `__result`. Therefore, the first value in `__result` is the first value of the input, the second value in `__result` is the sum of the first and second input values, and so on.

Parameters

| | |
|-----------------------|-----------------------|
| <code>__first</code> | Start of input range. |
| <code>__last</code> | End of input range. |
| <code>__result</code> | Output sum. |

Returns

Iterator pointing just beyond the values written to `__result`.

Definition at line 237 of file `stl_numeric.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs_pu()`, and `__gnu_parallel::__sequential_random_shuffle()`.

3.11.4.240 `template<typename _InputIterator, typename _OutputIterator, typename _BinaryOperation> _OutputIterator
std::partial_sum (_InputIterator __first, _InputIterator __last, _OutputIterator __result, _BinaryOperation __binary_op)`

Return list of partial sums.

Accumulates the values in the range [first,last) using `__binary_op`. As each successive input value is added into the total, that partial sum is written to `__result`. Therefore, the first value in `__result` is the first value of the input, the second value in `__result` is the sum of the first and second input values, and so on.

Parameters

| | |
|--------------------------|-----------------------|
| <code>__first</code> | Start of input range. |
| <code>__last</code> | End of input range. |
| <code>__result</code> | Output sum. |
| <code>__binary_op</code> | Function object. |

Returns

Iterator pointing just beyond the values written to `__result`.

Definition at line 278 of file `stl_numeric.h`.

3.11.4.241 `template<typename _MoneyT> _Put_money<_MoneyT> std::put_money (const _MoneyT & __mon, bool __intl =
false) [inline]`

Extended manipulator for inserting money.

Parameters

| | |
|---------------------|---|
| <code>__mon</code> | Either long double or a specialization of <code>basic_string</code> . |
| <code>__intl</code> | A bool indicating whether international format is to be used. |

Sent to a stream object, this manipulator inserts `__mon`.

Definition at line 303 of file `iomanip`.

3.11.4.242 `template<typename _Tp> reference_wrapper<_Tp> std::ref (_Tp & __t) [inline], [noexcept]`

Denotes a reference should be taken to a variable.

Definition at line 443 of file `functional`.

Referenced by `ref()`.

3.11.4.243 `template<typename _Tp> void std::ref (const _Tp &&) [delete]`

Denotes a reference should be taken to a variable.

3.11.4.244 `template<typename _Tp> reference_wrapper<_Tp> std::ref (reference_wrapper<_Tp> __t) [inline],
[noexcept]`

Partial specialization.

Definition at line 461 of file `functional`.

References `ref()`.

3.11.4.245 `template<typename _InputIterator, typename _OutputIterator, typename _Tp> _OutputIterator std::replace_copy (
_InputIterator __first, _InputIterator __last, _OutputIterator __result, const _Tp & __old_value, const _Tp & __new_value
) [inline]`

Copy a sequence, replacing each element of one value with another value.

Parameters

| | |
|--------------------------|---------------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__result</code> | An output iterator. |
| <code>__old_value</code> | The value to be replaced. |
| <code>__new_value</code> | The replacement value. |

Returns

The end of the output sequence, `result+(last-first)`.

Copies each element in the input range `[__first,__last)` to the output range `[__result,__result+(__last-__first))` replacing elements equal to `__old_value` with `__new_value`.

Definition at line 3135 of file `stl_algo.h`.

3.11.4.246 `bitset<_Nb>& std::reset ()` `[noexcept]`

Sets every bit to false.

Definition at line 1092 of file `bitset`.

3.11.4.247 `bitset<_Nb>& std::reset (size_t __position)`

Sets a given bit to false.

Parameters

| | |
|-------------------------|-----------------------|
| <code>__position</code> | The index of the bit. |
|-------------------------|-----------------------|

Exceptions

| | |
|--------------------------------|--|
| <code>std::out_of_range</code> | If <code>pos</code> is bigger the size of the set. |
|--------------------------------|--|

Same as writing `set (pos, false)`.

Definition at line 1106 of file `bitset`.

References `_Unchecked_reset()`.

3.11.4.248 `_Resetiosflags std::resetiosflags (ios_base::fmtflags __mask)` `[inline]`

Manipulator for `setf`.

Parameters

| | |
|---------------------|----------------------|
| <code>__mask</code> | A format flags mask. |
|---------------------|----------------------|

Sent to a stream object, this manipulator resets the specified flags, via `stream.setf(0,__mask)`.

Definition at line 63 of file `iomanip`.

3.11.4.249 `template<typename _Tp> void std::return_temporary_buffer (_Tp* __p)` `[inline]`

The companion to `get_temporary_buffer()`.

Parameters

| | |
|------------------|--|
| <code>__p</code> | A buffer previously allocated by <code>get_temporary_buffer</code> . |
|------------------|--|

Returns

None.

Frees the memory pointed to by `__p`.

Definition at line 112 of file `stl_tempbuf.h`.

Referenced by `std::_Temporary_buffer<_ForwardIterator, _Tp>::_Temporary_buffer()`.

3.11.4.250 ios_base& std::right (ios_base & __base) [inline]

Calls `base.setf(ios_base::right, ios_base::adjustfield)`.

Definition at line 924 of file `ios_base.h`.

References `__gnu_debug::__base()`, `std::ios_base::adjustfield`, `std::ios_base::right`, and `std::ios_base::setf()`.

3.11.4.251 ios_base& std::scientific (ios_base & __base) [inline]

Calls `base.setf(ios_base::scientific, ios_base::floatfield)`.

Definition at line 966 of file `ios_base.h`.

References `__gnu_debug::__base()`, `std::ios_base::floatfield`, `std::ios_base::scientific`, and `std::ios_base::setf()`.

Referenced by operator `<<()`.

3.11.4.252 bitset<_Nb>& std::set () [noexcept]

Sets every bit to true.

Definition at line 1068 of file `bitset`.

3.11.4.253 bitset<_Nb>& std::set (size_t __position, bool __val = true)

Sets a given bit to a particular value.

Parameters

| | |
|-------------------------|---|
| <code>__position</code> | The index of the bit. |
| <code>__val</code> | Either true or false, defaults to true. |

Exceptions

| | |
|--------------------------------|--|
| <code>std::out_of_range</code> | If <code>pos</code> is bigger the size of the set. |
|--------------------------------|--|

Definition at line 1082 of file `bitset`.

References `_Unchecked_set()`.

3.11.4.254 new_handler std::set_new_handler (new_handler) throw

Takes a replacement handler as the argument, returns the previous handler.

3.11.4.255 _Setbase std::setbase (int __base) [inline]

Manipulator for `setf`.

Parameters

| | |
|---------------------|-----------------|
| <code>__base</code> | A numeric base. |
|---------------------|-----------------|

Sent to a stream object, this manipulator changes the `ios_base::basefield` flags to `oct`, `dec`, or `hex` when `base` is 8, 10, or 16, accordingly, and to 0 if `__base` is any other value.

Definition at line 124 of file `iomanip`.

3.11.4.256 `template<typename _CharT> _Setfill<_CharT> std::setfill (_CharT __c) [inline]`

Manipulator for `fill`.

Parameters

| | |
|------------------|-------------------------|
| <code>__c</code> | The new fill character. |
|------------------|-------------------------|

Sent to a stream object, this manipulator calls `fill(__c)` for that object.

Definition at line 162 of file `iomanip`.

3.11.4.257 `_Setiosflags std::setiosflags (ios_base::fmtflags __mask) [inline]`

Manipulator for `setf`.

Parameters

| | |
|---------------------|----------------------|
| <code>__mask</code> | A format flags mask. |
|---------------------|----------------------|

Sent to a stream object, this manipulator sets the format flags to `__mask`.

Definition at line 93 of file `iomanip`.

3.11.4.258 `_Setprecision std::setprecision (int __n) [inline]`

Manipulator for `precision`.

Parameters

| | |
|------------------|--------------------|
| <code>__n</code> | The new precision. |
|------------------|--------------------|

Sent to a stream object, this manipulator calls `precision(__n)` for that object.

Definition at line 192 of file `iomanip`.

3.11.4.259 `_Setw std::setw (int __n) [inline]`

Manipulator for `width`.

Parameters

| | |
|------------------|----------------|
| <code>__n</code> | The new width. |
|------------------|----------------|

Sent to a stream object, this manipulator calls `width(__n)` for that object.

Definition at line 222 of file `iomanip`.

3.11.4.260 `ios_base& std::showbase (ios_base & __base) [inline]`

Calls `base.setf(ios_base::showbase)`.

Definition at line 811 of file `ios_base.h`.

References `__gnu_debug::__base()`, `std::ios_base::setf()`, and `std::ios_base::showbase`.

3.11.4.261 ios_base& std::showpoint (ios_base & __base) [inline]

Calls base.setf(ios_base::showpoint).

Definition at line 827 of file ios_base.h.

References `__gnu_debug::__base()`, `std::ios_base::setf()`, and `std::ios_base::showpoint`.

3.11.4.262 ios_base& std::showpos (ios_base & __base) [inline]

Calls base.setf(ios_base::showpos).

Definition at line 843 of file ios_base.h.

References `__gnu_debug::__base()`, `std::ios_base::setf()`, and `std::ios_base::showpos`.

3.11.4.263 constexpr size_t std::size () const [noexcept]

Returns the total number of bits.

Definition at line 1293 of file bitset.

Referenced by `std::deque< _Tp, _Alloc >::M_new_elements_at_back()`, `std::deque< _Tp, _Alloc >::M_new_elements_at_front()`, `std::basic_string< _CharT, _Traits, _Alloc >::append()`, `std::basic_string< _CharT, _Traits, _Alloc >::assign()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare()`, `std::basic_string< _CharT, _Traits, _Alloc >::compare()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find()`, `std::basic_string< _CharT, _Traits, _Alloc >::find()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_not_of()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_of()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_first_of()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_not_of()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_last_of()`, `std::vector< _Tp, _Alloc >::operator=()`, `std::deque< _Tp, _Alloc >::operator=()`, `std::vector< _Tp, _Alloc >::reserve()`, `std::basic_string< _CharT, _Traits, _Alloc >::reserve()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize()`, `std::basic_string< _CharT, _Traits, _Alloc >::resize()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind()`, and `std::basic_string< _CharT, _Traits, _Alloc >::rfind()`.

3.11.4.264 ios_base& std::skipws (ios_base & __base) [inline]

Calls base.setf(ios_base::skipws).

Definition at line 859 of file ios_base.h.

References `__gnu_debug::__base()`, `std::ios_base::setf()`, and `std::ios_base::skipws`.

Referenced by operator>>().

3.11.4.274 `template<typename _Res , typename... _Args> void std::swap (function< _Res(_Args...)> & __x, function< _Res(_Args...)> & __y) [inline]`

Swap the targets of two polymorphic function object wrappers.

This function will not throw an exception.

Definition at line 2534 of file functional.

3.11.4.275 `template<typename _CharT , typename _Traits , typename _Alloc > void std::swap (basic_string< _CharT, _Traits, _Alloc > & __lhs, basic_string< _CharT, _Traits, _Alloc > & __rhs) [inline]`

Swap contents of two strings.

Parameters

| | |
|--------------------|----------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Second string. |

Exchanges the contents of `__lhs` and `__rhs` in constant time.

Definition at line 2736 of file basic_string.h.

References `std::basic_string< _CharT, _Traits, _Alloc >::swap()`.

3.11.4.276 `bool std::test (size_t __position) const`

Tests the value of a bit.

Parameters

| | |
|-------------------------|---------------------|
| <code>__position</code> | The index of a bit. |
|-------------------------|---------------------|

Returns

The value at *pos*.

Exceptions

| | |
|--------------------------------|--|
| <code>std::out_of_range</code> | If <i>pos</i> is bigger the size of the set. |
|--------------------------------|--|

Definition at line 1314 of file bitset.

References `_Unchecked_test()`.

3.11.4.277 `template<class _CharT , class _Traits , class _Alloc > std::basic_string< char, std::char_traits< char >, std::allocator< char > > std::to_string () const`

Returns a character interpretation of the bitset.

Returns

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).

Definition at line 1190 of file bitset.

3.11.4.278 `unsigned long std::to_ulong () const`

Returns a numerical interpretation of the bitset.

Returns

The integral equivalent of the bits.

Exceptions

| | |
|----------------------------------|---|
| <code>std::overflow_error</code> | If there are too many bits to be represented in an unsigned long. |
|----------------------------------|---|

Definition at line 1171 of file `bitset`.

3.11.4.279 `template<typename _CharT> _CharT std::tolower (_CharT __c, const locale & __loc) [inline]`

Convenience interface to `ctype.tolower(__c)`.

Definition at line 2602 of file `locale_facets.h`.

3.11.4.280 `template<typename _CharT> _CharT std::toupper (_CharT __c, const locale & __loc) [inline]`

Convenience interface to `ctype.toupper(__c)`.

Definition at line 2596 of file `locale_facets.h`.

3.11.4.281 `template<typename _InputIterator, typename _ForwardIterator> _ForwardIterator std::uninitialized_copy (_InputIterator __first, _InputIterator __last, _ForwardIterator __result) [inline]`

Copies the range `[first,last)` into `result`.

Parameters

| | |
|-----------------------|---------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__result</code> | An output iterator. |

Returns

`__result + (__first - __last)`

Like `copy()`, but does not require an initialized output range.

Definition at line 107 of file `stl_uninitialized.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms_pu()`.

3.11.4.282 `template<typename _InputIterator, typename _Size, typename _ForwardIterator> _ForwardIterator std::uninitialized_copy_n (_InputIterator __first, _Size __n, _ForwardIterator __result) [inline]`

Copies the range `[first,first+n)` into `result`.

Parameters

| | |
|-----------------------|---------------------------------|
| <code>__first</code> | An input iterator. |
| <code>__n</code> | The number of elements to copy. |
| <code>__result</code> | An output iterator. |

Returns

`__result + __n`

Like `copy_n()`, but does not require an initialized output range.

Definition at line 673 of file `stl_uninitialized.h`.

References `__iterator_category()`.

3.11.4.283 `template<typename _ForwardIterator, typename _Tp> void std::uninitialized_fill (_ForwardIterator __first, _ForwardIterator __last, const _Tp & __x) [inline]`

Copies the value `x` into the range `[first,last)`.

Parameters

| | |
|----------------------|--------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code> | An input iterator. |
| <code>__x</code> | The source value. |

Returns

Nothing.

Like `fill()`, but does not require an initialized output range.

Definition at line 172 of file `stl_uninitialized.h`.

3.11.4.284 `template<typename _ForwardIterator, typename _Size, typename _Tp> void std::uninitialized_fill_n (_ForwardIterator __first, _Size __n, const _Tp & __x) [inline]`

Copies the value `x` into the range `[first,first+n)`.

Parameters

| | |
|----------------------|-------------------------------|
| <code>__first</code> | An input iterator. |
| <code>__n</code> | The number of copies to make. |
| <code>__x</code> | The source value. |

Returns

Nothing.

Like `fill_n()`, but does not require an initialized output range.

Definition at line 232 of file `stl_uninitialized.h`.

3.11.4.285 `ios_base& std::unitbuf (ios_base & __base) [inline]`

Calls `base.setf(ios_base::unitbuf)`.

Definition at line 891 of file `ios_base.h`.

References `__gnu_debug::__base()`, `std::ios_base::setf()`, and `std::ios_base::unitbuf`.

3.11.4.286 `ios_base& std::uppercase (ios_base & __base) [inline]`

Calls `base.setf(ios_base::uppercase)`.

Definition at line 875 of file `ios_base.h`.

References `__gnu_debug::__base()`, `std::ios_base::setf()`, and `std::ios_base::uppercase`.

3.11.4.287 `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits> & std::ws (basic_istream< _CharT, _Traits> & __is)`

Quick and easy way to eat whitespace.

This manipulator extracts whitespace characters, stopping when the next character is non-whitespace, or when the input sequence is empty. If the sequence is empty, `eofbit` is set in the stream, but not `failbit`.

The current locale is used to distinguish whitespace characters.

Example:

```
MyClass mc;
std::cin >> std::ws >> mc;
```

will skip leading whitespace before calling `operator>>` on `cin` and your object. Note that the same effect can be achieved by creating a `std::basic_istream::sentry` inside your definition of `operator>>`.

Definition at line 1016 of file `istream.tcc`.

References `std::ios_base::eofbit`, `std::ios_base::getloc()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

3.11.5 Variable Documentation

3.11.5.1 `ios_base::init std::__ioinit` [static]

Linked to standard error (buffered)

Definition at line 74 of file `iostream`.

3.11.5.2 `ostream std::cerr`

Linked to standard output.

3.11.5.3 `istream std::cin`

Linked to standard input.

3.11.5.4 `ostream std::clog`

Linked to standard error (unbuffered)

3.11.5.5 `ostream std::cout`

Linked to standard input.

3.11.5.6 `wostream std::wcerr`

Linked to standard output.

3.11.5.7 `wistream std::wcin`

Linked to standard error (buffered)

3.11.5.8 `wostream std::wclog`

Linked to standard error (unbuffered)

3.11.5.9 `wostream std::wcout`

Linked to standard input.

3.12.1 Detailed Description

GNU debug code, replaces standard behavior with debug behavior. Macros and namespaces used by the implementation outside of debug wrappers to verify certain properties. The `__glibcxx_requires_xxx` macros are merely wrappers around the `__glibcxx_check_xxx` wrappers when we are compiling with debug mode, but disappear when we are in release mode so that there is no checking performed in, e.g., the standard library algorithms.

3.12.2 Function Documentation

3.12.2.1 `template<typename _Tp, typename _Alloc> bool std::__debug::operator<= (const forward_list< _Tp, _Alloc> & __lx, const forward_list< _Tp, _Alloc> & __ly) [inline]`

Based on operator<.

Definition at line 768 of file debug/forward_list.

3.12.2.2 `template<typename _Tp, typename _Alloc> bool std::__debug::operator> (const forward_list< _Tp, _Alloc> & __lx, const forward_list< _Tp, _Alloc> & __ly) [inline]`

Based on operator<.

Definition at line 754 of file debug/forward_list.

3.12.2.3 `template<typename _Tp, typename _Alloc> bool std::__debug::operator>= (const forward_list< _Tp, _Alloc> & __lx, const forward_list< _Tp, _Alloc> & __ly) [inline]`

Based on operator<.

Definition at line 761 of file debug/forward_list.

3.12.2.4 `template<typename _Tp, typename _Alloc> void std::__debug::swap (forward_list< _Tp, _Alloc> & __lx, forward_list< _Tp, _Alloc> & __ly) [inline]`

See `std::forward_list::swap()`.

Definition at line 775 of file debug/forward_list.

3.14.1 Detailed Description

GNU parallel code, replaces standard behavior with parallel behavior.

3.15 std::__profile Namespace Reference

3.15.1 Detailed Description

GNU profile code, replaces standard behavior with profile behavior.

3.15.2 Function Documentation

3.15.2.1 `template<typename _Tp, typename _Alloc> bool std::__profile::operator<= (const forward_list< _Tp, _Alloc> & __lx, const forward_list< _Tp, _Alloc> & __ly) [inline]`

Based on operator<.

Definition at line 166 of file profile/forward_list.

3.15.2.2 `template<typename _Tp, typename _Alloc> bool std::__profile::operator> (const forward_list< _Tp, _Alloc> & __lx, const forward_list< _Tp, _Alloc> & __ly) [inline]`

Based on operator<.

Definition at line 152 of file profile/forward_list.

3.15.2.3 `template<typename _Tp, typename _Alloc> bool std::__profile::operator>= (const forward_list< _Tp, _Alloc> & __lx, const forward_list< _Tp, _Alloc> & __ly) [inline]`

Based on operator<.

Definition at line 159 of file profile/forward_list.

3.15.2.4 `template<typename _Tp, typename _Alloc> void std::__profile::swap (forward_list< _Tp, _Alloc> & __lx, forward_list< _Tp, _Alloc> & __ly) [inline]`

See `std::forward_list::swap()`.

Definition at line 173 of file profile/forward_list.

### 3.16.1 Detailed Description

ISO C++ 2011 entities sub-namespace for time and date.

### 3.16.2 Typedef Documentation

#### 3.16.2.1 typedef duration<int64\_t, ratio<3600> > std::chrono::hours

hours

Definition at line 542 of file chrono.

#### 3.16.2.2 typedef duration<int64\_t, micro> std::chrono::microseconds

microseconds

Definition at line 530 of file chrono.

#### 3.16.2.3 typedef duration<int64\_t, milli> std::chrono::milliseconds

milliseconds

Definition at line 533 of file chrono.

#### 3.16.2.4 typedef duration<int64\_t, ratio< 60> > std::chrono::minutes

minutes

Definition at line 539 of file chrono.

#### 3.16.2.5 typedef duration<int64\_t, nano> std::chrono::nanoseconds

nanoseconds

Definition at line 527 of file chrono.

#### 3.16.2.6 typedef duration<int64\_t> std::chrono::seconds

seconds

Definition at line 536 of file chrono.

### 3.16.3 Function Documentation

#### 3.16.3.1 template<typename \_ToDur, typename \_Rep, typename \_Period > constexpr enable\_if<\_\_is\_duration<\_ToDur>::value, \_ToDur>::type std::chrono::duration\_cast ( const duration< \_Rep, \_Period > & \_\_d )

duration\_cast

Definition at line 194 of file chrono.

Referenced by std::this\_thread::sleep\_for().

#### 3.16.3.2 template<typename \_ToDur, typename \_Clock, typename \_Dur > constexpr enable\_if<\_\_is\_duration<\_ToDur>::value, time\_point<\_Clock, \_ToDur> >::type std::chrono::time\_point\_cast ( const time\_point<\_Clock, \_Dur> & \_\_t )

time\_point\_cast

Definition at line 603 of file chrono.

### 3.18.1 Detailed Description

ISO C++11 entities sub-namespace for functional.

### 3.19 std::regex\_constants Namespace Reference

#### 5.1 Regular Expression Syntax Options

- enum `__syntax_option` {  
`_S_icalse`, `_S_nosubs`, `_S_optimize`, `_S_collate`,  
`_S_ECMAScript`, `_S_basic`, `_S_extended`, `_S_awk`,  
`_S_grep`, `_S_egrep`, `_S_syntax_last` }
- enum `syntax_option_type` : unsigned int {  
`icalse`, `nosubs`, `optimize`, `collate`,  
`ECMAScript`, `basic`, `extended`, `awk`,  
`grep`, `egrep` }
- constexpr `syntax_option_type operator&` (`syntax_option_type __a`, `syntax_option_type __b`)
- constexpr `syntax_option_type operator|` (`syntax_option_type __a`, `syntax_option_type __b`)
- constexpr `syntax_option_type operator^` (`syntax_option_type __a`, `syntax_option_type __b`)
- constexpr `syntax_option_type operator~` (`syntax_option_type __a`)
- `syntax_option_type & operator&=` (`syntax_option_type & __a`, `syntax_option_type __b`)
- `syntax_option_type & operator|=` (`syntax_option_type & __a`, `syntax_option_type __b`)
- `syntax_option_type & operator^=` (`syntax_option_type & __a`, `syntax_option_type __b`)

#### 5.2 Matching Rules

Matching a regular expression against a sequence of characters [first, last) proceeds according to the rules of the grammar specified for the regular expression object, modified according to the effects listed below for any bitmask elements set.

- enum `__match_flag` {  
`_S_not_bol`, `_S_not_eol`, `_S_not_bow`, `_S_not_eow`,  
`_S_any`, `_S_not_null`, `_S_continuous`, `_S_prev_avail`,  
`_S_sed`, `_S_no_copy`, `_S_first_only`, `_S_match_flag_last` }
- enum `match_flag_type` : unsigned int {  
`match_default`, `match_not_bol`, `match_not_eol`, `match_not_bow`,  
`match_not_eow`, `match_any`, `match_not_null`, `match_continuous`,  
`match_prev_avail`, `format_default`, `format_sed`, `format_no_copy`,  
`format_first_only` }
- constexpr `match_flag_type operator&` (`match_flag_type __a`, `match_flag_type __b`)
- constexpr `match_flag_type operator|` (`match_flag_type __a`, `match_flag_type __b`)
- constexpr `match_flag_type operator^` (`match_flag_type __a`, `match_flag_type __b`)
- constexpr `match_flag_type operator~` (`match_flag_type __a`)
- `match_flag_type & operator&=` (`match_flag_type & __a`, `match_flag_type __b`)
- `match_flag_type & operator|=` (`match_flag_type & __a`, `match_flag_type __b`)
- `match_flag_type & operator^=` (`match_flag_type & __a`, `match_flag_type __b`)

#### 5.3 Error Types

- enum `error_type` {  
`_S_error_collate`, `_S_error_ctype`, `_S_error_escape`, `_S_error_backref`,  
`_S_error_brack`, `_S_error_paren`, `_S_error_brace`, `_S_error_badbrace`,  
`_S_error_range`, `_S_error_space`, `_S_error_badrepeat`, `_S_error_complexity`,  
`_S_error_stack` }
- constexpr `error_type error_collate` (`_S_error_collate`)

- constexpr [error\\_type error\\_ctype](#) (\_S\_error\_ctype)
- constexpr [error\\_type error\\_escape](#) (\_S\_error\_escape)
- constexpr [error\\_type error\\_backref](#) (\_S\_error\_backref)
- constexpr [error\\_type error\\_brack](#) (\_S\_error\_brack)
- constexpr [error\\_type error\\_paren](#) (\_S\_error\_paren)
- constexpr [error\\_type error\\_brace](#) (\_S\_error\_brace)
- constexpr [error\\_type error\\_badbrace](#) (\_S\_error\_badbrace)
- constexpr [error\\_type error\\_range](#) (\_S\_error\_range)
- constexpr [error\\_type error\\_space](#) (\_S\_error\_space)
- constexpr [error\\_type error\\_badrepeat](#) (\_S\_error\_badrepeat)
- constexpr [error\\_type error\\_complexity](#) (\_S\_error\_complexity)
- constexpr [error\\_type error\\_stack](#) (\_S\_error\_stack)

### 3.19.1 Detailed Description

ISO C++-0x entities sub namespace for regex.

### 3.19.2 Enumeration Type Documentation

#### 3.19.2.1 enum std::regex\_constants::\_\_match\_flag

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 213 of file `regex_constants.h`.

#### 3.19.2.2 enum std::regex\_constants::\_\_syntax\_option

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 54 of file `regex_constants.h`.

#### 3.19.2.3 enum std::regex\_constants::error\_type

The expression contained an invalid collating element name.

Definition at line 49 of file `regex_error.h`.

#### 3.19.2.4 enum std::regex\_constants::match\_flag\_type : unsigned int

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

### Enumerator

***match\_default*** The default matching rules.

**match\_not\_bol** The first character in the sequence [first, last) is treated as though it is not at the beginning of a line, so the character (^) in the regular expression shall not match [first, first).

**match\_not\_eol** The last character in the sequence [first, last) is treated as though it is not at the end of a line, so the character (\$) in the regular expression shall not match [last, last).

**match\_not\_bow** The expression \b is not matched against the sub-sequence [first,first).

**match\_not\_eow** The expression \b should not be matched against the sub-sequence [last,last).

**match\_any** If more than one match is possible then any match is an acceptable result.

**match\_not\_null** The expression does not match an empty sequence.

**match\_continuous** The expression only matches a sub-sequence that begins at first .

**match\_prev\_avail** –first is a valid iterator position. When this flag is set then the flags match\_not\_bol and match\_not\_bow are ignored by the regular expression algorithms 28.11 and iterators 28.12.

**format\_default** When a regular expression match is to be replaced by a new string, the new string is constructed using the rules used by the ECMAScript replace function in ECMA- 262 [Ecma International, ECMAScript Language Specification, Standard Ecma-262, third edition, 1999], part 15.5.4.11 String.prototype.replace. In addition, during search and replace operations all non-overlapping occurrences of the regular expression are located and replaced, and sections of the input that did not match the expression are copied unchanged to the output string.

Format strings (from ECMA-262 [15.5.4.11]):

- \$\$ The dollar-sign itself (\$)
- \$& The matched substring.
- \$' The portion of *string* that precedes the matched substring. This would be match\_results::prefix().
- \$' The portion of *string* that follows the matched substring. This would be match\_results::suffix().
- \$n The nth capture, where n is in [1,9] and \$n is not followed by a decimal digit. If n <= match\_results::size() and the nth capture is undefined, use the empty string instead. If n > match\_results::size(), the result is implementation-defined.
- \$nn The nnth capture, where nn is a two-digit decimal number on [01, 99]. If nn <= match\_results::size() and the nth capture is undefined, use the empty string instead. If nn > match\_results::size(), the result is implementation-defined.

**format\_sed** When a regular expression match is to be replaced by a new string, the new string is constructed using the rules used by the POSIX sed utility in IEEE Std 1003.1- 2001 [IEEE, Information Technology – Portable Operating System Interface (POSIX), IEEE Standard 1003.1-2001].

**format\_no\_copy** During a search and replace operation, sections of the character container sequence being searched that do not match the regular expression shall not be copied to the output string.

**format\_first\_only** When specified during a search and replace operation, only the first occurrence of the regular expression shall be replaced.

Definition at line 236 of file regex\_constants.h.

### 3.19.2.5 enum std::regex\_constants::syntax\_option\_type : unsigned int

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

#### Enumerator

**icase** Specifies that the matching of regular expressions against a character sequence shall be performed without regard to case.

- nosubs*** Specifies that when a regular expression is matched against a character container sequence, no sub-expression matches are to be stored in the supplied match\_results structure.
- optimize*** Specifies that the regular expression engine should pay more attention to the speed with which regular expressions are matched, and less to the speed with which regular expression objects are constructed. Otherwise it has no detectable effect on the program output.
- collate*** Specifies that character ranges of the form [a-b] should be locale sensitive.
- ECMAScript*** Specifies that the grammar recognized by the regular expression engine is that used by ECMAScript in ECMA-262 [Ecma International, ECMAScript Language Specification, Standard Ecma-262, third edition, 1999], as modified in section [28.13]. This grammar is similar to that defined in the PERL scripting language but extended with elements found in the POSIX regular expression grammar.
- basic*** Specifies that the grammar recognized by the regular expression engine is that used by POSIX basic regular expressions in IEEE Std 1003.1-2001, Portable Operating System Interface (POSIX), Base Definitions and Headers, Section 9, Regular Expressions [IEEE, Information Technology – Portable Operating System Interface (POSIX), IEEE Standard 1003.1-2001].
- extended*** Specifies that the grammar recognized by the regular expression engine is that used by POSIX extended regular expressions in IEEE Std 1003.1-2001, Portable Operating System Interface (POSIX), Base Definitions and Headers, Section 9, Regular Expressions.
- awk*** Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility awk in IEEE Std 1003.1-2001. This option is identical to syntax\_option\_type extended, except that C-style escape sequences are supported. These sequences are: \\, \a, \b, \f, \n, \r, \t, \v, \&apos;, &apos;, and \ddd (where ddd is one, two, or three octal digits).
- grep*** Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility grep in IEEE Std 1003.1-2001. This option is identical to syntax\_option\_type basic, except that newlines are treated as whitespace.
- egrep*** Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility grep when given the -E option in IEEE Std 1003.1-2001. This option is identical to syntax\_option\_type extended, except that newlines are treated as whitespace.

Definition at line 80 of file regex\_constants.h.

### 3.19.3 Function Documentation

#### 3.19.3.1 constexpr error\_type std::regex\_constants::error\_backref ( \_S\_error\_backref )

The expression contained an invalid back reference.

#### 3.19.3.2 constexpr error\_type std::regex\_constants::error\_badbrace ( \_S\_error\_badbrace )

The expression contained an invalid range in a {} expression.

#### 3.19.3.3 constexpr error\_type std::regex\_constants::error\_badrepeat ( \_S\_error\_badrepeat )

One of \*?+{ was not preceded by a valid regular expression.

#### 3.19.3.4 constexpr error\_type std::regex\_constants::error\_brace ( \_S\_error\_brace )

The expression contained mismatched { and }

#### 3.19.3.5 constexpr error\_type std::regex\_constants::error\_brack ( \_S\_error\_brack )

The expression contained mismatched [ and ].

### 3.19.3.6 `constexpr error_type std::regex_constants::error_collate ( _S_error_collate )`

The expression contained an invalid collating element name.

### 3.19.3.7 `constexpr error_type std::regex_constants::error_complexity ( _S_error_complexity )`

The complexity of an attempted match against a regular expression exceeded a pre-set level.

### 3.19.3.8 `constexpr error_type std::regex_constants::error_ctype ( _S_error_ctype )`

The expression contained an invalid character class name.

### 3.19.3.9 `constexpr error_type std::regex_constants::error_escape ( _S_error_escape )`

The expression contained an invalid escaped character, or a trailing escape.

### 3.19.3.10 `constexpr error_type std::regex_constants::error_paren ( _S_error_paren )`

The expression contained mismatched ( and ).

### 3.19.3.11 `constexpr error_type std::regex_constants::error_range ( _S_error_range )`

The expression contained an invalid character range, such as [b-a] in most encodings.

### 3.19.3.12 `constexpr error_type std::regex_constants::error_space ( _S_error_space )`

There was insufficient memory to convert the expression into a finite state machine.

### 3.19.3.13 `constexpr error_type std::regex_constants::error_stack ( _S_error_stack )`

There was insufficient memory to determine whether the regular expression could match the specified character sequence.

### 3.19.3.14 `constexpr syntax_option_type std::regex_constants::operator& ( syntax_option_type __a, syntax_option_type __b ) [inline]`

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 164 of file `regex_constants.h`.

### 3.19.3.15 `constexpr match_flag_type std::regex_constants::operator& ( match_flag_type __a, match_flag_type __b ) [inline]`

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 343 of file `regex_constants.h`.

**3.19.3.16** `syntax_option_type& std::regex_constants::operator&= ( syntax_option_type __a, syntax_option_type __b )`  
`[inline]`

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 189 of file `regex_constants.h`.

**3.19.3.17** `match_flag_type& std::regex_constants::operator&= ( match_flag_type __a, match_flag_type __b )` `[inline]`

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 368 of file `regex_constants.h`.

**3.19.3.18** `constexpr syntax_option_type std::regex_constants::operator^ ( syntax_option_type __a, syntax_option_type __b )`  
`[inline]`

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 178 of file `regex_constants.h`.

**3.19.3.19** `constexpr match_flag_type std::regex_constants::operator^ ( match_flag_type __a, match_flag_type __b )`  
`[inline]`

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 357 of file `regex_constants.h`.

**3.19.3.20** `syntax_option_type& std::regex_constants::operator^= ( syntax_option_type __a, syntax_option_type __b )`  
`[inline]`

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 197 of file `regex_constants.h`.

**3.19.3.21** `match_flag_type& std::regex_constants::operator^= ( match_flag_type __a, match_flag_type __b )` `[inline]`

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and

expect the right thing to happen.

Definition at line 376 of file `regex_constants.h`.

**3.19.3.22** `constexpr syntax_option_type std::regex_constants::operator| ( syntax_option_type __a, syntax_option_type __b )`  
`[inline]`

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 171 of file `regex_constants.h`.

**3.19.3.23** `constexpr match_flag_type std::regex_constants::operator| ( match_flag_type __a, match_flag_type __b )`  
`[inline]`

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 350 of file `regex_constants.h`.

**3.19.3.24** `syntax_option_type& std::regex_constants::operator|= ( syntax_option_type & __a, syntax_option_type __b )`  
`[inline]`

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 193 of file `regex_constants.h`.

**3.19.3.25** `match_flag_type& std::regex_constants::operator|= ( match_flag_type & __a, match_flag_type __b )` `[inline]`

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 372 of file `regex_constants.h`.

**3.19.3.26** `constexpr syntax_option_type std::regex_constants::operator~ ( syntax_option_type __a )` `[inline]`

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 185 of file `regex_constants.h`.

3.19.3.27 constexpr match\_flag\_type std::regex\_constants::operator~( match\_flag\_type \_\_a ) [inline]

This is a bitmask type indicating regex matching rules.

The match\_flag\_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 364 of file regex\_constants.h.

## 3.20 std::rel\_ops Namespace Reference

### Functions

- template<class \_Tp >  
bool operator!= (const \_Tp &\_\_x, const \_Tp &\_\_y)
- template<class \_Tp >  
bool operator<= (const \_Tp &\_\_x, const \_Tp &\_\_y)
- template<class \_Tp >  
bool operator> (const \_Tp &\_\_x, const \_Tp &\_\_y)
- template<class \_Tp >  
bool operator>= (const \_Tp &\_\_x, const \_Tp &\_\_y)

### 3.20.1 Detailed Description

The generated relational operators are sequestered here.

### 3.20.2 Function Documentation

3.20.2.1 template<class \_Tp > bool std::rel\_ops::operator!= ( const \_Tp &\_\_x, const \_Tp &\_\_y ) [inline]

Defines != for arbitrary types, in terms of ==.

#### Parameters

|     |                |
|-----|----------------|
| __x | A thing.       |
| __y | Another thing. |

#### Returns

\_\_x != \_\_y

This function uses == to determine its result.

Definition at line 87 of file stl\_relops.h.

3.20.2.2 template<class \_Tp > bool std::rel\_ops::operator<= ( const \_Tp &\_\_x, const \_Tp &\_\_y ) [inline]

Defines <= for arbitrary types, in terms of <.

#### Parameters

|                  |                |
|------------------|----------------|
| <code>__x</code> | A thing.       |
| <code>__y</code> | Another thing. |

**Returns**

`__x <= __y`

This function uses `<` to determine its result.

Definition at line 113 of file `stl_relops.h`.

**3.20.2.3** `template<class _Tp> bool std::rel_ops::operator> ( const _Tp & __x, const _Tp & __y ) [inline]`

Defines `>` for arbitrary types, in terms of `<`.

**Parameters**

|                  |                |
|------------------|----------------|
| <code>__x</code> | A thing.       |
| <code>__y</code> | Another thing. |

**Returns**

`__x > __y`

This function uses `<` to determine its result.

Definition at line 100 of file `stl_relops.h`.

**3.20.2.4** `template<class _Tp> bool std::rel_ops::operator>= ( const _Tp & __x, const _Tp & __y ) [inline]`

Defines `>=` for arbitrary types, in terms of `<`.

**Parameters**

|                  |                |
|------------------|----------------|
| <code>__x</code> | A thing.       |
| <code>__y</code> | Another thing. |

**Returns**

`__x >= __y`

This function uses `<` to determine its result.

Definition at line 126 of file `stl_relops.h`.

**3.21 std::this\_thread Namespace Reference****Functions**

- void `__sleep_for` ([chrono::seconds](#), [chrono::nanoseconds](#))

- `template<typename _Clock, typename _Duration>`  
void `sleep_until` (const [chrono::time\\_point](#)< \_Clock, \_Duration > &\_\_atime)
- void `yield` () noexcept

## 3.21.1 Detailed Description

ISO C++ 2011 entities sub-namespace for thread. 30.3.2 Namespace this\_thread.

## 3.21.2 Function Documentation

## 3.21.2.1 thread::id std::this\_thread::get\_id ( ) [inline],[noexcept]

get\_id

Definition at line 252 of file thread.

## 3.21.2.2 template&lt;typename \_Rep, typename \_Period &gt; void std::this\_thread::sleep\_for ( const chrono::duration&lt; \_Rep, \_Period &gt; &amp;\_\_rtime ) [inline]

sleep\_for

Definition at line 269 of file thread.

References std::chrono::duration\_cast().

Referenced by sleep\_until().

## 3.21.2.3 template&lt;typename \_Clock, typename \_Duration &gt; void std::this\_thread::sleep\_until ( const chrono::time\_point&lt; \_Clock, \_Duration &gt; &amp;\_\_atime ) [inline]

sleep\_until

Definition at line 288 of file thread.

References sleep\_for().

## 3.21.2.4 void std::this\_thread::yield ( ) [inline],[noexcept]

yield

Definition at line 256 of file thread.

### 3.24.1 Detailed Description

ISO C++ TR2 entities toplevel namespace is `std::tr2`.

### 3.24.2 Function Documentation

3.24.2.1 `template<typename _WordT, typename _Alloc > bool std::tr2::operator!= ( const dynamic_bitset< _WordT, _Alloc > &`  
`__lhs, const dynamic_bitset< _WordT, _Alloc > & __rhs ) [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1156 of file `dynamic_bitset`.

3.24.2.2 `template<typename _WordT, typename _Alloc > dynamic_bitset< _WordT, _Alloc> std::tr2::operator& ( const`  
`dynamic_bitset< _WordT, _Alloc > & __x, const dynamic_bitset< _WordT, _Alloc > & __y ) [inline]`

Global bitwise operations on bitsets.

#### Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A bitset.                                       |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

#### Returns

A new bitset.

These should be self-explanatory.

Definition at line 1191 of file `dynamic_bitset`.

3.24.2.3 `template<typename _WordT, typename _Alloc> dynamic_bitset<_WordT, _Alloc> std::tr2::operator- ( const dynamic_bitset<_WordT, _Alloc> & __x, const dynamic_bitset<_WordT, _Alloc> & __y ) [inline]`

Global bitwise operations on bitsets.

## Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A bitset.                                       |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

## Returns

A new bitset.

These should be self-explanatory.

Definition at line 1221 of file `dynamic_bitset`.

**3.24.2.4** `template<typename _WordT, typename _Alloc> bool std::tr2::operator<= ( const dynamic_bitset< _WordT, _Alloc> & __lhs, const dynamic_bitset< _WordT, _Alloc> & __rhs ) [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1162 of file `dynamic_bitset`.

**3.24.2.5** `template<typename _WordT, typename _Alloc> bool std::tr2::operator> ( const dynamic_bitset< _WordT, _Alloc> & __lhs, const dynamic_bitset< _WordT, _Alloc> & __rhs ) [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1168 of file `dynamic_bitset`.

**3.24.2.6** `template<typename _WordT, typename _Alloc> bool std::tr2::operator>= ( const dynamic_bitset< _WordT, _Alloc> & __lhs, const dynamic_bitset< _WordT, _Alloc> & __rhs ) [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1174 of file `dynamic_bitset`.

**3.24.2.7** `template<typename _WordT, typename _Alloc> dynamic_bitset< _WordT, _Alloc> std::tr2::operator^ ( const dynamic_bitset< _WordT, _Alloc> & __x, const dynamic_bitset< _WordT, _Alloc> & __y ) [inline]`

Global bitwise operations on bitsets.

## Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A bitset.                                       |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

## Returns

A new bitset.

These should be self-explanatory.

Definition at line 1211 of file `dynamic_bitset`.

**3.24.2.8** `template<typename _WordT, typename _Alloc> dynamic_bitset< _WordT, _Alloc> std::tr2::operator| ( const dynamic_bitset< _WordT, _Alloc> & __x, const dynamic_bitset< _WordT, _Alloc> & __y ) [inline]`

Global bitwise operations on bitsets.

## Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A bitset.                                       |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

## Returns

A new bitset.

These should be self-explanatory.

Definition at line 1201 of file `dynamic_bitset`.

## 3.25 std::tr2::\_\_detail Namespace Reference

### 3.25.1 Detailed Description

Implementation details not part of the namespace `std::tr2` interface. Dynamic Bitset.

See N2050, Proposal to Add a Dynamically Sizeable Bitset to the Standard Library.

## 4 Class Documentation

### 4.1 \_\_cxxabiv1::\_\_forced\_unwind Class Reference

#### 4.1.1 Detailed Description

Thrown as part of forced unwinding.

A magic placeholder class that can be caught by reference to recognize forced unwinding.

Definition at line 48 of file `cxxabi_forced.h`.

The documentation for this class was generated from the following file:

- [cxxabi\\_forced.h](#)

## 4.2 `__gnu_cxx::__alloc_traits<_Alloc>` Struct Template Reference

Inheritance diagram for `__gnu_cxx::__alloc_traits<_Alloc>`:

### Public Types

- typedef `std::allocator_traits<_Alloc>` **Base\_type**
- typedef `_Alloc` **allocator\_type**
- typedef `_Base_type::const_pointer` **const\_pointer**
- typedef `const value_type & const_reference`
- typedef `__const_void_pointer` **const\_void\_pointer**
- typedef `_Base_type::difference_type` **difference\_type**
- typedef `_Base_type::pointer` **pointer**
- typedef  
`__propagate_on_container_copy_assignment` **propagate\_on\_container\_copy\_assignment**
- typedef  
`__propagate_on_container_move_assignment` **propagate\_on\_container\_move\_assignment**
- typedef  
`__propagate_on_container_swap` **propagate\_on\_container\_swap**
- template<typename `_Tp`>  
using **rebind\_alloc** = typename `__alloctr_rebind<_Alloc, _Tp>::__type`
- template<typename `_Tp`>  
using **rebind\_traits** = `allocator_traits< rebind_alloc<_Tp>>`
- typedef `value_type` & **reference**
- typedef `_Base_type::size_type` **size\_type**
- typedef `_Base_type::value_type` **value\_type**
- typedef `__void_pointer` **void\_pointer**

### Static Public Member Functions

- static constexpr bool **\_S\_always\_equal** ()
- static constexpr bool **\_S\_nothrow\_move** ()
- static constexpr bool **\_S\_nothrow\_swap** ()
- static void **\_S\_on\_swap** (`_Alloc &__a, _Alloc &__b`)

- static constexpr bool `_S_propagate_on_copy_assign` ()

::value >::type **destroy** (`_Alloc` &\_\_a, `_Ptr` \_\_p)
- template<class `_Tp` >  
static void **destroy** (`_Alloc` &\_\_a, `_Tp` \*\_\_p)
- static `size_type max_size` (const `_Alloc` &\_\_a) noexcept
- static `_Alloc` **select\_on\_container\_copy\_construction** (const `_Alloc` &\_\_rhs)

#### 4.2.1 Detailed Description

template<typename `_Alloc`> struct `__gnu_cxx::__alloc_traits<_Alloc>`

Uniform interface to C++98 and C++0x allocators.

Definition at line 95 of file `ext/alloc_traits.h`.

#### 4.2.2 Member Typedef Documentation

4.2.2.1 template<typename `_Alloc`> typedef `__const_void_pointer std::allocator_traits<_Alloc>::const_void_pointer` [inherited]

The allocator's const void pointer type.

`Alloc::const_void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const void>`

Definition at line 135 of file `bits/alloc_traits.h`.

4.2.2.2 template<typename `_Alloc`> typedef `__propagate_on_container_copy_assignment std::allocator_traits<_Alloc>::propagate_on_container_copy_assignment` [inherited]

How the allocator is propagated on copy assignment.

`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`

Definition at line 169 of file `bits/alloc_traits.h`.

**4.2.2.3** `template<typename _Alloc> typedef __propagate_on_container_move_assignment std::allocator_traits< _Alloc >::propagate_on_container_move_assignment [inherited]`

How the allocator is propagated on move assignment.

`_Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`

Definition at line 181 of file `bits/alloc_traits.h`.

**4.2.2.4** `template<typename _Alloc> typedef __propagate_on_container_swap std::allocator_traits< _Alloc >::propagate_on_container_swap [inherited]`

How the allocator is propagated on swap.

`_Alloc::propagate_on_container_swap` if that type exists, otherwise `false_type`

Definition at line 192 of file `bits/alloc_traits.h`.

**4.2.2.5** `template<typename _Alloc> typedef __void_pointer std::allocator_traits< _Alloc >::void_pointer [inherited]`

The allocator's void pointer type.

`_Alloc::void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<void>`

Definition at line 124 of file `bits/alloc_traits.h`.

## 4.2.3 Member Function Documentation

**4.2.3.1** `template<typename _Alloc> static pointer std::allocator_traits< _Alloc >::allocate ( _Alloc & __a, size_type __n ) [inline], [static], [inherited]`

Allocate memory.

Parameters

|                  |                                              |
|------------------|----------------------------------------------|
| <code>__a</code> | An allocator.                                |
| <code>__n</code> | The number of objects to allocate space for. |

Calls `a.allocate(n)`

Definition at line 356 of file `bits/alloc_traits.h`.

**4.2.3.2** `template<typename _Alloc> static pointer std::allocator_traits< _Alloc >::allocate ( _Alloc & __a, size_type __n, const_void_pointer __hint ) [inline], [static], [inherited]`

Allocate memory.

Parameters

|                     |                                              |
|---------------------|----------------------------------------------|
| <code>__a</code>    | An allocator.                                |
| <code>__n</code>    | The number of objects to allocate space for. |
| <code>__hint</code> | Aid to locality.                             |

Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

Definition at line 371 of file `bits/alloc_traits.h`.

```
4.2.3.3 template<typename _Alloc> template<typename _Tp, typename... _Args> static auto std::allocator_traits<
 _Alloc>::construct (_Alloc & __a, _Tp * __p, _Args &&... __args) -> decltype(_S_construct(__a, __p,
 std::forward<_Args>(__args)...)) [inline],[static],[inherited]
```

Construct an object of type `_Tp`.

## Parameters

|                     |                                                                      |
|---------------------|----------------------------------------------------------------------|
| <code>__a</code>    | An allocator.                                                        |
| <code>__p</code>    | Pointer to memory of suitable size and alignment for <code>Tp</code> |
| <code>__args</code> | Constructor arguments.                                               |

Calls `__a.construct(__p, std::forward<Args>(__args)...) if that expression is well-formed, otherwise uses placement-new to construct an object of type _Tp at location __p from the arguments __args...`

Definition at line 397 of file `bits/alloc_traits.h`.

**4.2.3.4** `template<typename _Alloc> static void std::allocator_traits<_Alloc>::deallocate ( _Alloc & __a, pointer __p, size_type __n ) [inline],[static],[inherited]`

Deallocate memory.

## Parameters

|                  |                                                |
|------------------|------------------------------------------------|
| <code>__a</code> | An allocator.                                  |
| <code>__p</code> | Pointer to the memory to deallocate.           |
| <code>__n</code> | The number of objects space was allocated for. |

Calls `a.deallocate(p, n)`

Definition at line 382 of file `bits/alloc_traits.h`.

**4.2.3.5** `template<typename _Alloc> template<class _Tp> static void std::allocator_traits<_Alloc>::destroy ( _Alloc & __a, _Tp* __p ) [inline],[static],[inherited]`

Destroy an object of type `_Tp`.

## Parameters

|                  |                                  |
|------------------|----------------------------------|
| <code>__a</code> | An allocator.                    |
| <code>__p</code> | Pointer to the object to destroy |

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`

Definition at line 410 of file `bits/alloc_traits.h`.

**4.2.3.6** `template<typename _Alloc> static size_type std::allocator_traits<_Alloc>::max_size ( const _Alloc & __a ) [inline],[static],[noexcept],[inherited]`

The maximum supported allocation size.

## Parameters

|                  |               |
|------------------|---------------|
| <code>__a</code> | An allocator. |
|------------------|---------------|

**Returns**

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`

Definition at line 421 of file `bits/alloc_traits.h`.

Referenced by `std::forward_list<_Tp, _Alloc>::max_size()`.

**4.2.3.7** `template<typename _Alloc> static _Alloc std::allocator_traits<_Alloc>::select_on_container_copy_construction ( const _Alloc & __rhs )` `[inline]`, `[static]`, `[inherited]`

Obtain an allocator to use when copying a container.

**Parameters**

|                    |               |
|--------------------|---------------|
| <code>__rhs</code> | An allocator. |
|--------------------|---------------|

**Returns**

`__rhs.select_on_container_copy_construction()` or `__rhs`

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns `__rhs`

Definition at line 433 of file `bits/alloc_traits.h`.

The documentation for this struct was generated from the following file:

- [ext/alloc\\_traits.h](#)

### 4.3 `__gnu_cxx::__common_pool_policy<_PoolTp, _Thread>` Struct Template Reference

Inherits `__gnu_cxx::__common_pool_base<_PoolTp, _Thread>`.

#### 4.3.1 Detailed Description

```
template<template< bool > class _PoolTp, bool _Thread> struct __gnu_cxx::__common_pool_policy< _PoolTp, _Thread >
```

Policy for shared `__pool` objects.

Definition at line 460 of file `mt_allocator.h`.

The documentation for this struct was generated from the following file:

- [mt\\_allocator.h](#)

### 4.4 `__gnu_cxx::__detail::__mini_vector<_Tp>` Class Template Reference

**Public Types**

- typedef const `_Tp` & **const\_reference**
- typedef ptrdiff\_t **difference\_type**
- typedef pointer **iterator**
- typedef `_Tp *` **pointer**
- typedef `_Tp &` **reference**
- typedef size\_t **size\_type**
- typedef `_Tp` **value\_type**

**Public Member Functions**

- reference **back** () const throw ()
- iterator **begin** () const throw ()
- void **clear** () throw ()
- iterator **end** () const throw ()
- void **erase** (iterator `__pos`) throw ()

- void **insert** (iterator `__pos`, const\_reference `__x`)
- reference **operator[]** (const size\_type `__pos`) const throw ()
- void **pop\_back** () throw ()
- void **push\_back** (const\_reference `__x`)
- size\_type **size** () const throw ()

#### 4.4.1 Detailed Description

`template<typename _Tp>class __gnu_cxx::__detail::_mini_vector<_Tp>`

`_mini_vector<>` is a stripped down version of the full-fledged `std::vector<>`.

It is to be used only for built-in types or PODs. Notable differences are:

1. Not all accessor functions are present. 2. Used ONLY for PODs. 3. No Allocator template argument. Uses `operator new()` to get memory, and `operator delete()` to free it. Caveat: The dtor does NOT free the memory allocated, so this a memory-leaking vector!

Definition at line 69 of file `bitmap_allocator.h`.

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

## 4.5 `__gnu_cxx::__detail::_Bitmap_counter<_Tp>` Class Template Reference

### Public Member Functions

- `_Bitmap_counter` ([\\_BPVector](#) &Rvbp, long `__index=-1`)
- pointer `_M_base` () const throw ()
- bool `_M_finished` () const throw ()
- size\_t \* `_M_get` () const throw ()
- `_Index_type` `_M_offset` () const throw ()
- void `_M_reset` (long `__index=-1`) throw ()
- void `_M_set_internal_bitmap` (size\_t \* `__new_internal_marker`) throw ()
- `_Index_type` `_M_where` () const throw ()
- [\\_Bitmap\\_counter](#) & **operator++** () throw ()

#### 4.5.1 Detailed Description

`template<typename _Tp>class __gnu_cxx::__detail::_Bitmap_counter<_Tp>`

The bitmap counter which acts as the bitmap manipulator, and manages the bit-manipulation functions and the searching and identification functions on the bit-map.

Definition at line 396 of file `bitmap_allocator.h`.

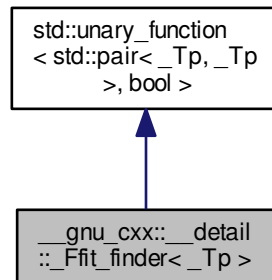

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

## 4.6 `__gnu_cxx::__detail::_Ffit_finder<_Tp>` Class Template Reference

Inheritance diagram for `__gnu_cxx::__detail::_Ffit_finder<_Tp>`:

### Public Types

- typedef `std::pair<_Tp, _Tp>` `argument_type`
- typedef `bool` `result_type`

### Public Member Functions

- `size_t * _M_get () const throw ()`
- `_Counter_type _M_offset () const throw ()`
- `bool operator() (_Block_pair __bp) throw ()`

#### 4.6.1 Detailed Description

```
template<typename _Tp>class __gnu_cxx::__detail::_Ffit_finder<_Tp>
```

The class which acts as a predicate for applying the first-fit memory allocation policy for the bitmap allocator.

Definition at line 331 of file `bitmap_allocator.h`.

#### 4.6.2 Member Typedef Documentation

**4.6.2.1** typedef `std::pair<_Tp, _Tp>` `std::unary_function<std::pair<_Tp, _Tp>, bool>::argument_type`  
[inherited]

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

4.6.2.2 `typedef bool std::unary_function< std::pair<_Tp, _Tp>, bool>::result_type` [inherited]

`result_type` is the return type

Definition at line 111 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

## 4.7 `__gnu_cxx::__mt_alloc<_Tp, _Poolp>` Class Template Reference

Inheritance diagram for `__gnu_cxx::__mt_alloc<_Tp, _Poolp>`:

### Public Types

- `typedef _Poolp __policy_type`
- `typedef _Poolp::pool_type __pool_type`
- `typedef const _Tp * const_pointer`
- `typedef const _Tp & const_reference`
- `typedef ptrdiff_t difference_type`
- `typedef _Tp * pointer`
- `typedef std::true\_type propagate_on_container_move_assignment`
- `typedef _Tp & reference`
- `typedef size_t size_type`
- `typedef _Tp value_type`

### Public Member Functions

- `__mt_alloc` (const [\\_\\_mt\\_alloc](#) &) noexcept
- `template<typename _Tp1, typename _Poolp1 >`  
`__mt_alloc` (const [\\_\\_mt\\_alloc](#)<\_Tp1, \_Poolp1 > &) noexcept
- `const __pool_base::Tune __M_get_options ()`
- `void __M_set_options (__pool_base::Tune __t)`
- `pointer address` (reference \_\_x) const noexcept

- const\_pointer **address** (const\_reference \_\_x) const noexcept
- pointer **allocate** (size\_type \_\_n, const void \*=0)
- template<typename \_Up, typename... \_Args>  
void **construct** (\_Up \*\_\_p, \_Args &&... \_\_args)
- void **deallocate** (pointer \_\_p, size\_type \_\_n)
- template<typename \_Up >  
void **destroy** (\_Up \*\_\_p)
- size\_type **max\_size** () const noexcept

#### 4.7.1 Detailed Description

```
template<typename _Tp, typename _Poolp = __common_pool_policy<__pool, true >> class __gnu_cxx::__mt_alloc< _Tp, _Poolp >
```

This is a fixed size (power of 2) allocator which - when compiled with thread support - will maintain one freelist per size per thread plus a *global* one. Steps are taken to limit the per thread freelist sizes (by returning excess back to the *global* list).

Further details: <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch32.html>.

Definition at line 639 of file mt\_allocator.h.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

#### 4.8 \_\_gnu\_cxx::\_\_mt\_alloc\_base< \_Tp > Class Template Reference

Inheritance diagram for \_\_gnu\_cxx::\_\_mt\_alloc\_base< \_Tp >:

#### Public Types

- typedef const \_Tp \* **const\_pointer**
- typedef const \_Tp & **const\_reference**
- typedef ptrdiff\_t **difference\_type**
- typedef \_Tp \* **pointer**

- typedef `std::true_type` `propagate_on_container_move_assignment`
- typedef `_Tp &` `reference`
- typedef `size_t` `size_type`
- typedef `_Tp` `value_type`

#### Public Member Functions

- pointer **address** (reference `__x`) const noexcept
- const\_pointer **address** (const\_reference `__x`) const noexcept
- template<typename `_Up`, typename... `_Args`>  
void **construct** (`_Up *``__p`, `_Args &&...``__args`)
- template<typename `_Up` >  
void **destroy** (`_Up *``__p`)
- size\_type **max\_size** () const noexcept

##### 4.8.1 Detailed Description

template<typename `_Tp`>class `__gnu_cxx::__mt_alloc_base<_Tp >`

Base class for `_Tp` dependent member functions.

Definition at line 570 of file `mt_allocator.h`.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

## 4.9 `__gnu_cxx::__per_type_pool_policy<_Tp, _PoolTp, _Thread >` Struct Template Reference

Inherits `__gnu_cxx::__per_type_pool_base<_Tp, _PoolTp, _Thread >`.

##### 4.9.1 Detailed Description

template<typename `_Tp`, template< bool > class `_PoolTp`, bool `_Thread`>struct `__gnu_cxx::__per_type_pool_policy<_Tp, _PoolTp, _Thread >`

Policy for individual `__pool` objects.

Definition at line 555 of file `mt_allocator.h`.

The documentation for this struct was generated from the following file:

- [mt\\_allocator.h](#)

## 4.10 `__gnu_cxx::__pool<_Thread >` Class Template Reference

##### 4.10.1 Detailed Description

template<bool `_Thread`>class `__gnu_cxx::__pool<_Thread >`

Data describing the underlying memory pool, parameterized on threading support.

Definition at line 192 of file mt\_allocator.h.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

#### 4.11 `__gnu_cxx::__pool< false >` Class Template Reference

Inheritance diagram for `__gnu_cxx::__pool< false >`:

##### Public Types

- typedef unsigned short int **`_Binmap_type`**

##### Public Member Functions

- **`__pool`** (const `__pool_base::_Tune` & `__tune`)
- void **`_M_adjust_freelist`** (const `_Bin_record` &, `_Block_record` \*, `size_t`)

- size\_t **\_M\_get\_thread\_id** ()
- void **\_M\_initialize** (\_\_destroy\_handler)
- void **\_M\_initialize\_once** ()
- void **\_M\_reclaim\_block** (char \* \_\_p, size\_t \_\_bytes) throw ()
- char \* **\_M\_reserve\_block** (size\_t \_\_bytes, const size\_t \_\_thread\_id)
- void **\_M\_set\_options** (\_Tune \_\_t)

### Protected Attributes

- `_Binmap_type * _M_binmap`
- `bool _M_init`
- `_Tune _M_options`

#### 4.12.1 Detailed Description

`template<> class __gnu_cxx::__pool< true >`

Specialization for thread enabled, via gthreads.h.

Definition at line 263 of file `mt_allocator.h`.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

#### 4.13 `__gnu_cxx::__pool_alloc< _Tp >` Class Template Reference

Inheritance diagram for `__gnu_cxx::__pool_alloc< _Tp >`:

### Public Types

- `typedef const _Tp * const_pointer`
- `typedef const _Tp & const_reference`
- `typedef ptrdiff_t difference_type`
- `typedef _Tp * pointer`
- `typedef std::true\_type propagate_on_container_move_assignment`
- `typedef _Tp & reference`
- `typedef size_t size_type`
- `typedef _Tp value_type`

## Public Member Functions

- `__pool_alloc` (const `__pool_alloc` &) noexcept
- `template<typename _Tp1 > __pool_alloc` (const `__pool_alloc<_Tp1>` &) noexcept
- pointer `address` (reference `__x`) const noexcept
- const\_pointer `address` (const\_reference `__x`) const noexcept
- pointer `allocate` (size\_type `__n`, const void `*=0`)
- `template<typename _Up, typename... _Args> void construct` (`_Up *__p`, `_Args &&... __args`)
- void `deallocate` (pointer `__p`, size\_type `__n`)
- `template<typename _Up > void destroy` (`_Up *__p`)
- size\_type `max_size` () const noexcept

## Private Types

- enum { `_S_align` }

##### 4.14.1 Detailed Description

Base class for \_\_pool\_alloc.

Uses various allocators to fulfill underlying requests (and makes as few requests as possible when in default high-speed pool mode).

Important implementation properties: 0. If globally mandated, then allocate objects from new 1. If the clients request an object of size > \_S\_max\_bytes, the resulting object will be obtained directly from new 2. In all other cases, we allocate an object of size exactly \_S\_round\_up(requested\_size). Thus the client has enough size information that we can return the object to the proper free list without permanently losing part of the object.

## 4.16.1 Detailed Description

template<typename `_CharT`, typename `_Traits`, typename `_Alloc`>class `__gnu_cxx::__rc_string_base<_CharT, _Traits, _Alloc>`

Documentation? What's that? Nathan Myers [ncm@cantrip.org](mailto:ncm@cantrip.org).

A string looks like this:

```

[__rc_string_base<char_type>]
_M_dataplus
_M_p ----->
 [_Rep]
 _M_length
 _M_capacity
 _M_refcount
 unnamed array of char_type

```

Where the `_M_p` points to the first character in the string, and you cast it to a pointer-to-`_Rep` and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: `_Rep::_M_refdata()`, and `__rc_string_base::_M_rep()`; and the allocation function which gets a block of raw bytes and with room enough and constructs a `_Rep` object at the front.

The reason you want `_M_data` pointing to the character array and not the `_Rep` is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the `_Rep` for the debugger to use, so users can check the actual string length.)

Note that the `_Rep` object is a POD so that you can have a static *empty string* `_Rep` object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string `_Rep` object.

All but the last paragraph is considered pretty conventional for a C++ string implementation.

Definition at line 82 of file `rc_string_base.h`.

#### 4.18.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base>class
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >
```

Template class `__versa_string`.

Data structure managing sequences of characters and character-like objects.

Definition at line 56 of file `vstring.h`.

#### 4.18.2 Constructor & Destructor Documentation

```
4.18.2.1 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (const _Alloc & __a =
_Alloc()) [inline],[explicit],[noexcept]
```

Construct an empty string using allocator `a`.

Definition at line 137 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::substr()`.

```
4.18.2.2 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (const
__versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]
```

Construct string with copy of value of `__str`.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

Definition at line 145 of file `vstring.h`.

```
4.18.2.3 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::__versa_string (__versa_string<
_CharT, _Traits, _Alloc, _Base > && __str) [inline], [noexcept]
```

String move constructor.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

The newly-constructed string contains the exact contents of `__str`. The contents of `__str` are a valid, but unspecified string.

Definition at line 157 of file `vstring.h`.

```
4.18.2.4 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::__versa_string (std::initializer_list<
_CharT > __l, const _Alloc & __a = _Alloc()) [inline]
```

Construct string from an initializer list.

## Parameters

|                  |                                                   |
|------------------|---------------------------------------------------|
| <code>__l</code> | <code>std::initializer_list</code> of characters. |
| <code>__a</code> | Allocator to use (default is default allocator).  |

Definition at line 165 of file `vstring.h`.

```
4.18.2.5 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::__versa_string (const
__versa_string<_CharT, _Traits, _Alloc, _Base > & __str, size_type __pos, size_type __n = npos) [inline]
```

Construct string as copy of a substring.

## Parameters

|                    |                                                   |
|--------------------|---------------------------------------------------|
| <code>__str</code> | Source string.                                    |
| <code>__pos</code> | Index of first character to copy from.            |
| <code>__n</code>   | Number of characters to copy (default remainder). |

Definition at line 176 of file `vstring.h`.

```
4.18.2.6 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::__versa_string (const
__versa_string<_CharT, _Traits, _Alloc, _Base > & __str, size_type __pos, size_type __n, const _Alloc & __a)
[inline]
```

Construct string as copy of a substring.

## Parameters

---

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__str</code> | Source string.                         |
| <code>__pos</code> | Index of first character to copy from. |
| <code>__n</code>   | Number of characters to copy.          |
| <code>__a</code>   | Allocator to use.                      |

Definition at line 191 of file `vstring.h`.

```
4.18.2.7 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (const _CharT * __s,
size_type __n, const _Alloc & __a = _Alloc()) [inline]
```

Construct string initialized by a character array.

Parameters

|                  |                                                  |
|------------------|--------------------------------------------------|
| <code>__s</code> | Source character array.                          |
| <code>__n</code> | Number of characters to copy.                    |
| <code>__a</code> | Allocator to use (default is default allocator). |

NB: `__s` must have at least `__n` characters, `'\0'` has no special meaning.

Definition at line 208 of file `vstring.h`.

```
4.18.2.8 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (const _CharT * __s,
const _Alloc & __a = _Alloc()) [inline]
```

Construct string as copy of a C string.

Parameters

|                  |                                                  |
|------------------|--------------------------------------------------|
| <code>__s</code> | Source C string.                                 |
| <code>__a</code> | Allocator to use (default is default allocator). |

Definition at line 217 of file `vstring.h`.

```
4.18.2.9 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (size_type __n, _CharT
__c, const _Alloc & __a = _Alloc()) [inline]
```

Construct string as multiple characters.

Parameters

|                  |                                                  |
|------------------|--------------------------------------------------|
| <code>__n</code> | Number of characters.                            |
| <code>__c</code> | Character to use.                                |
| <code>__a</code> | Allocator to use (default is default allocator). |

Definition at line 227 of file `vstring.h`.

```
4.18.2.10 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base> template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (_InputIterator __beg,
_InputIterator __end, const _Alloc & __a = _Alloc()) [inline]
```

Construct string as copy of a range.

## Parameters

|                    |                                                  |
|--------------------|--------------------------------------------------|
| <code>__beg</code> | Start of range.                                  |
| <code>__end</code> | End of range.                                    |
| <code>__a</code>   | Allocator to use (default is default allocator). |

Definition at line 242 of file `vstring.h`.

4.18.2.11 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::~__versa_string( ) [inline], [noexcept]`

Destroy the string instance.

Definition at line 249 of file `vstring.h`.

## 4.18.3 Member Function Documentation

4.18.3.1 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append( const __versa_string<_CharT, _Traits, _Alloc, _Base> &__str ) [inline]`

Append a string to this string.

## Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | The string to append. |
|--------------------|-----------------------|

## Returns

Reference to this string.

Definition at line 692 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`, `std::getline()`, `__gnu_cxx::operator+()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator+=( )`.

4.18.3.2 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append( const __versa_string<_CharT, _Traits, _Alloc, _Base> &__str, size_type __pos, size_type __n ) [inline]`

Append a substring.

## Parameters

|                    |                                                             |
|--------------------|-------------------------------------------------------------|
| <code>__str</code> | The string to append.                                       |
| <code>__pos</code> | Index of the first character of <code>str</code> to append. |
| <code>__n</code>   | The number of characters to append.                         |

## Returns

Reference to this string.

## Exceptions

|                                |                                     |
|--------------------------------|-------------------------------------|
| <code>std::out_of_range</code> | if <i>pos</i> is not a valid index. |
|--------------------------------|-------------------------------------|

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

Definition at line 709 of file `vstring.h`.

```
4.18.3.3 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (const _CharT *
__s, size_type __n) [inline]
```

Append a C substring.

## Parameters

|                  |                                     |
|------------------|-------------------------------------|
| <code>__s</code> | The C string to append.             |
| <code>__n</code> | The number of characters to append. |

## Returns

Reference to this string.

Definition at line 721 of file `vstring.h`.

```
4.18.3.4 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (const _CharT *
__s) [inline]
```

Append a C string.

## Parameters

|                  |                         |
|------------------|-------------------------|
| <code>__s</code> | The C string to append. |
|------------------|-------------------------|

## Returns

Reference to this string.

Definition at line 734 of file `vstring.h`.

```
4.18.3.5 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (size_type __n,
_CharT __c) [inline]
```

Append multiple characters.

## Parameters

|                  |                                     |
|------------------|-------------------------------------|
| <code>__n</code> | The number of characters to append. |
| <code>__c</code> | The character to use.               |

## Returns

Reference to this string.

Appends `n` copies of `c` to this string.

Definition at line 751 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size()`.

4.18.3.6 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append ( std::initializer_list<_CharT > __l ) [inline]`

Append an initializer\_list of characters.

Parameters

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__l</code> | The initializer_list of characters to append. |
|------------------|-----------------------------------------------|

Returns

Reference to this string.

Definition at line 761 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append()`.

4.18.3.7 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> template<class _InputIterator, typename = std::RequireInputIter<_InputIterator>> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append ( _InputIterator __first, _InputIterator __last ) [inline]`

Append a range of characters.

Parameters

|                      |                                                     |
|----------------------|-----------------------------------------------------|
| <code>__first</code> | Iterator referencing the first character to append. |
| <code>__last</code>  | Iterator marking the end of the range.              |

Returns

Reference to this string.

Appends characters in the range [first,last) to this string.

Definition at line 780 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

4.18.3.8 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign ( const __versa_string<_CharT, _Traits, _Alloc, _Base > &__str ) [inline]`

Set value to contents of another string.

Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | Source string to use. |
|--------------------|-----------------------|

Returns

Reference to this string.

Definition at line 803 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator=()`.

4.18.3.9 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign ( __versa_string< _CharT, _Traits, _Alloc, _Base > && __str ) [inline],[noexcept]`

Set value to contents of another string.

## Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | Source string to use. |
|--------------------|-----------------------|

## Returns

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

Definition at line 819 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::swap()`.

4.18.3.10 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign ( const __versa_string<_CharT, _Traits, _Alloc, _Base> &__str, size_type __pos, size_type __n ) [inline]`

Set value to a substring of a string.

## Parameters

|                    |                                                    |
|--------------------|----------------------------------------------------|
| <code>__str</code> | The string to use.                                 |
| <code>__pos</code> | Index of the first character of <code>str</code> . |
| <code>__n</code>   | Number of characters to use.                       |

## Returns

Reference to this string.

## Exceptions

|                                |                                             |
|--------------------------------|---------------------------------------------|
| <code>std::out_of_range</code> | if <code>__pos</code> is not a valid index. |
|--------------------------------|---------------------------------------------|

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

Definition at line 840 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

4.18.3.11 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign ( const _CharT *__s, size_type __n ) [inline]`

Set value to a C substring.

## Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__s</code> | The C string to use.         |
| <code>__n</code> | Number of characters to use. |

## Returns

Reference to this string.

This function sets the value of this string to the first `__n` characters of `__s`. If `__n` is larger than the number of available characters in `__s`, the remainder of `__s` is used.

Definition at line 857 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

4.18.3.12 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class  
_Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign ( const _CharT  
*_s ) [inline]`

Set value to contents of a C string.

## Parameters

|                  |                      |
|------------------|----------------------|
| <code>__s</code> | The C string to use. |
|------------------|----------------------|

## Returns

Reference to this string.

This function sets the value of this string to the value of `__s`. The data is copied, so there is no dependence on `__s` once the function returns.

Definition at line 873 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

**4.18.3.13** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign ( size_type __n, _CharT __c ) [inline]`

Set value to multiple characters.

## Parameters

|                  |                                 |
|------------------|---------------------------------|
| <code>__n</code> | Length of the resulting string. |
| <code>__c</code> | The character to use.           |

## Returns

Reference to this string.

This function sets the value of this string to `__n` copies of character `__c`.

Definition at line 890 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

**4.18.3.14** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> template<class _InputIterator, typename = std::RequireInputIter<_InputIterator>> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign ( _InputIterator __first, _InputIterator __last ) [inline]`

Set value to a range of characters.

## Parameters

|                      |                                                     |
|----------------------|-----------------------------------------------------|
| <code>__first</code> | Iterator referencing the first character to append. |
| <code>__last</code>  | Iterator marking the end of the range.              |

## Returns

Reference to this string.

Sets value of string to characters in the range `[first,last)`.

Definition at line 909 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

```
4.18.3.15 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
 class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign (
 std::initializer_list<_CharT > __l) [inline]
```

Set value to an initializer\_list of characters.

## Parameters

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__l</code> | The initializer_list of characters to assign. |
|------------------|-----------------------------------------------|

## Returns

Reference to this string.

Definition at line 919 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign()`.

**4.18.3.16** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::at ( size_type __n ) const [inline]`

Provides access to the data contained in the string.

## Parameters

|                  |                                       |
|------------------|---------------------------------------|
| <code>__n</code> | The index of the character to access. |
|------------------|---------------------------------------|

## Returns

Read-only (const) reference to the character.

## Exceptions

|                                |                                          |
|--------------------------------|------------------------------------------|
| <code>std::out_of_range</code> | If <code>__n</code> is an invalid index. |
|--------------------------------|------------------------------------------|

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

Definition at line 577 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

**4.18.3.17** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::at ( size_type __n ) [inline]`

Provides access to the data contained in the string.

## Parameters

|                  |                                       |
|------------------|---------------------------------------|
| <code>__n</code> | The index of the character to access. |
|------------------|---------------------------------------|

## Returns

Read/write reference to the character.

## Exceptions

|                                |                                          |
|--------------------------------|------------------------------------------|
| <code>std::out_of_range</code> | If <code>__n</code> is an invalid index. |
|--------------------------------|------------------------------------------|

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

Definition at line 599 of file `vstring.h`.

Erases the string, making it empty.

Definition at line 514 of file `vstring.h`.

4.18.3.27 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare ( const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str ) const` `[inline]`

Compare to a string.

Parameters

|                    |                            |
|--------------------|----------------------------|
| <code>__str</code> | String to compare against. |
|--------------------|----------------------------|

Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 2073 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::data()`, `std::min()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

Referenced by `__gnu_cxx::operator<()`, `__gnu_cxx::operator<=()`, `__gnu_cxx::operator==()`, `__gnu_cxx::operator>()`, and `__gnu_cxx::operator>=()`.

4.18.3.28 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare ( size_type __pos, size_type __n, const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str ) const`

Compare substring to a string.

## Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__pos</code> | Index of first character of substring. |
| <code>__n</code>   | Number of characters in substring.     |
| <code>__str</code> | String to compare against.             |

## Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__str`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 460 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::data()`, `std::min()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

4.18.3.29 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare( size_type __pos1, size_type __n1, const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str, size_type __pos2, size_type __n2 ) const`

Compare substring to a substring.

## Parameters

|                     |                                                             |
|---------------------|-------------------------------------------------------------|
| <code>__pos1</code> | Index of first character of substring.                      |
| <code>__n1</code>   | Number of characters in substring.                          |
| <code>__str</code>  | String to compare against.                                  |
| <code>__pos2</code> | Index of first character of substring of <code>str</code> . |
| <code>__n2</code>   | Number of characters in substring of <code>str</code> .     |

## Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer < 0 if this substring is ordered before the substring of `__str`, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 477 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::data()`, and `std::min()`.

4.18.3.30 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare( const _CharT * __s ) const`

Compare to a C string.

## Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__s</code> | C string to compare against. |
|------------------|------------------------------|

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before `__s`,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and the length of a string constructed from `__s`. The function then compares the two strings by calling `traits::compare(data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 496 of file `vstring.tcc`.

References `std::min()`, and `std::size()`.

4.18.3.31 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare ( size_type __pos, size_type __n1, const _CharT* __s ) const`

Compare substring to a C string.

## Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__pos</code> | Index of first character of substring. |
| <code>__n1</code>  | Number of characters in substring.     |
| <code>__s</code>   | C string to compare against.           |

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos`. Returns an integer  $< 0$  if the substring is ordered before `__s`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 512 of file `vstring.tcc`.

References `std::min()`.

4.18.3.32 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare ( size_type __pos, size_type __n1, const _CharT* __s, size_type __n2 ) const`

Compare substring against a character array.

## Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__pos</code> | Index of first character of substring. |
| <code>__n1</code>  | Number of characters in substring.     |
| <code>__s</code>   | character array to compare against.    |

|                   |                                          |
|-------------------|------------------------------------------|
| <code>__n2</code> | Number of characters of <code>s</code> . |
|-------------------|------------------------------------------|

**Returns**

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer  $< 0$  if this substring is ordered before the string from `__s`,  $0$  if their values are equivalent, or  $> 0$  if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(), __s, rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `__s` must have at least `n2` characters, `\0` has no special meaning.

Definition at line 529 of file `vstring.tcc`.

References `std::min()`.

```
4.18.3.33 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT,
_Traits, _Alloc, _Base >::copy (_CharT * __s, size_type __n, size_type __pos = 0) const
```

Copy substring into C string.

**Parameters**

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__s</code>   | C string to copy value into.      |
| <code>__n</code>   | Number of characters to copy.     |
| <code>__pos</code> | Index of first character to copy. |

**Returns**

Number of characters actually copied

**Exceptions**

|                                |                                     |
|--------------------------------|-------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos &gt; size()</code> . |
|--------------------------------|-------------------------------------|

Copies up to `__n` characters starting at `__pos` into the C string `s`. If `__pos` is greater than `size()`, `out_of_range` is thrown.

Definition at line 255 of file `vstring.tcc`.

```
4.18.3.34 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rbegin ()
const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 407 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end()`.

```

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 345 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

**4.18.340** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::erase ( size_type __pos = 0, size_type __n = npos ) [inline]`

Remove characters.

Parameters

---

|                    |                                                     |
|--------------------|-----------------------------------------------------|
| <code>__pos</code> | Index of first character to remove (default 0).     |
| <code>__n</code>   | Number of characters to remove (default remainder). |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |
|--------------------------------|---------------------------------------------------------|

Removes `__n` characters from this string starting at `__pos`. The length of the string is reduced by `__n`. If there are `< __n` characters to remove, the remainder of the string is truncated. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1173 of file `vstring.h`.

Referenced by `std::getline()`.

4.18.3.41 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase ( const_iterator __position ) [inline]`

Remove one character.

**Parameters**

|                         |                                               |
|-------------------------|-----------------------------------------------|
| <code>__position</code> | Iterator referencing the character to remove. |
|-------------------------|-----------------------------------------------|

**Returns**

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1190 of file `vstring.h`.

4.18.3.42 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase ( const_iterator __first, const_iterator __last ) [inline]`

Remove a range of characters.

**Parameters**

|                      |                                                     |
|----------------------|-----------------------------------------------------|
| <code>__first</code> | Iterator referencing the first character to remove. |
| <code>__last</code>  | Iterator referencing the end of the range.          |

**Returns**

Iterator referencing location of first after removal.

Removes the characters in the range `[first,last)` from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1215 of file `vstring.h`.

```
4.18.3.43 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
 _Base> __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT,
 _Traits, _Alloc, _Base >::find (const _CharT * __s, size_type __pos, size_type __n) const
```

Find position of a C substring.

**Parameters**

|                    |                                                           |
|--------------------|-----------------------------------------------------------|
| <code>__s</code>   | C string to locate.                                       |
| <code>__pos</code> | Index of character to search from.                        |
| <code>__n</code>   | Number of characters from <code>__s</code> to search for. |

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 270 of file `vstring.tcc`.

References `std::size()`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_first_of()`.

```

_Base> size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find (const __versa_string<
_CharT, _Traits, _Alloc, _Base > & __str, size_type __pos = 0) const [inline], [noexcept]
```

Find position of a string.

**Parameters**

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String to locate.                              |
| <code>__pos</code> | Index of character to search from (default 0). |

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1693 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::data()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

```
4.18.3.45 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find (const _CharT * __s,
size_type __pos = 0) const [inline]
```

Find position of a C string.

**Parameters**

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__s</code>   | C string to locate.                            |
| <code>__pos</code> | Index of character to search from (default 0). |

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1708 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find()`.

4.18.3.46 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string<_CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find ( _CharT __c, size_type __pos = 0 ) const [noexcept]`

Find position of a character.

Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__c</code>   | Character to locate.                           |
| <code>__pos</code> | Index of character to search from (default 0). |

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 294 of file `vstring.tcc`.

References `std::size()`.

4.18.3.47 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_first_not_of ( const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str, size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a character not in string.

Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String containing characters to avoid.         |
| <code>__pos</code> | Index of character to search from (default 0). |

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1925 of file `vstring.h`.

Find position of a character not in C substring.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__s</code>   | C string containing characters to avoid.              |
| <code>__pos</code> | Index of character to search from.                    |
| <code>__n</code>   | Number of characters from <code>s</code> to consider. |

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 392 of file `vstring.tcc`.

References `std::size()`.

Find last position of a character.

Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__c</code>   | Character to locate.                                  |
| <code>__pos</code> | Index of character to search back from (default end). |

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(c, pos)`.

Definition at line 1911 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::rfind()`.

**4.18.3.63** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::front ( ) [inline], [noexcept]`

Returns a read/write reference to the data at the first element of the string.

Definition at line 616 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator[]()`.

**4.18.3.64** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::front ( ) const [inline], [noexcept]`

Returns a read-only (constant) reference to the data at the first element of the string.

Definition at line 624 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator[]()`.

**4.18.3.65** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> allocator_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::get_allocator ( ) const [inline], [noexcept]`

Return copy of allocator used to construct this string.

Definition at line 1664 of file `vstring.h`.

**4.18.3.66** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert ( const_iterator __p, size_type __n, _CharT __c ) [inline]`

Insert multiple characters.

**Parameters**

|                  |                                                             |
|------------------|-------------------------------------------------------------|
| <code>__p</code> | Const_iterator referencing location in string to insert at. |
| <code>__n</code> | Number of characters to insert                              |
| <code>__c</code> | The character to insert.                                    |

**Returns**

Iterator referencing the first inserted char.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 940 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert()`.

```
4.18.3.67 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> template<class _InputIterator, typename = std:: _RequireInputIter<_InputIterator>> iterator
__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert (const_iterator __p, _InputIterator __beg,
_InputIterator __end) [inline]
```

Insert a range of characters.

**Parameters**

|                    |                                                             |
|--------------------|-------------------------------------------------------------|
| <code>__p</code>   | Const_iterator referencing location in string to insert at. |
| <code>__beg</code> | Start of range.                                             |
| <code>__end</code> | End of range.                                               |

**Returns**

Iterator referencing the first inserted char.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts characters in range `[beg,end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 984 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`.

```
4.18.3.68 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert (const_iterator __p,
std::initializer_list<_CharT> __l) [inline]
```

Insert an `initializer_list` of characters.

## Parameters

|                  |                                                             |
|------------------|-------------------------------------------------------------|
| <code>__p</code> | Const_iterator referencing location in string to insert at. |
| <code>__l</code> | The initializer_list of characters to insert.               |

## Returns

Iterator referencing the first inserted char.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Definition at line 1020 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert()`.

4.18.3.69 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert ( size_type __pos1, const __versa_string<_CharT, _Traits, _Alloc, _Base> &__str ) [inline]`

Insert value of a string.

## Parameters

|                     |                                                       |
|---------------------|-------------------------------------------------------|
| <code>__pos1</code> | Iterator referencing location in string to insert at. |
| <code>__str</code>  | The string to insert.                                 |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1037 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

4.18.3.70 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert ( size_type __pos1, const __versa_string<_CharT, _Traits, _Alloc, _Base> &__str, size_type __pos2, size_type __n ) [inline]`

Insert a substring.

## Parameters

|                     |                                                       |
|---------------------|-------------------------------------------------------|
| <code>__pos1</code> | Iterator referencing location in string to insert at. |
| <code>__str</code>  | The string to insert.                                 |

|                     |                                                    |
|---------------------|----------------------------------------------------|
| <code>__pos2</code> | Start of characters in <code>str</code> to insert. |
| <code>__n</code>    | Number of characters to insert.                    |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                                               |
|--------------------------------|-------------------------------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .                               |
| <code>std::out_of_range</code> | If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; __str.size()</code> . |

Starting at `__pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1060 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

4.18.3.71 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert ( size_type __pos, const _CharT* __s, size_type __n ) [inline]`

Insert a C substring.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__pos</code> | Iterator referencing location in string to insert at. |
| <code>__s</code>   | The C string to insert.                               |
| <code>__n</code>   | The number of characters to insert.                   |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1083 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

4.18.3.72 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert ( size_type __pos, const _CharT* __s ) [inline]`

Insert a C string.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__pos</code> | Iterator referencing location in string to insert at. |
| <code>__s</code>   | The C string to insert.                               |

## Returns

Reference to this string.

## Exceptions

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1102 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`.

4.18.3.73 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert ( size_type __pos, size_type __n, _CharT __c ) [inline]`

Insert multiple characters.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__pos</code> | Index in string to insert at.  |
| <code>__n</code>   | Number of characters to insert |
| <code>__c</code>   | The character to insert.       |

## Returns

Reference to this string.

## Exceptions

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1126 of file `vstring.h`.

4.18.3.74 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert ( const_iterator __p, _CharT __c ) [inline]`

Insert one character.

## Parameters

|                  |                                                       |
|------------------|-------------------------------------------------------|
| <code>__p</code> | Iterator referencing position in string to insert at. |
| <code>__c</code> | The character to insert.                              |

## Returns

Iterator referencing newly inserted char.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1145 of file `vstring.h`.

4.18.3.75 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::length ( ) const [inline], [noexcept]`

Returns the number of characters in the string, not including any null-termination.

Definition at line 431 of file `vstring.h`.

4.18.3.76 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::max_size ( ) const [inline], [noexcept]`

Returns the `size()` of the largest possible string.

Definition at line 436 of file `vstring.h`.

Referenced by `std::getline()`.

4.18.3.77 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+=( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) [inline]`

Append a string to this string.

## Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | The string to append. |
|--------------------|-----------------------|

## Returns

Reference to this string.

Definition at line 651 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append()`.

4.18.3.78 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+=( const _CharT * __s ) [inline]`

Append a C string.

## Parameters

|                  |                         |
|------------------|-------------------------|
| <code>__s</code> | The C string to append. |
|------------------|-------------------------|

## Returns

Reference to this string.

Definition at line 660 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append()`.

**4.18.3.79** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator+=( _CharT __c ) [inline]`

Append a character.

## Parameters

|                  |                          |
|------------------|--------------------------|
| <code>__c</code> | The character to append. |
|------------------|--------------------------|

## Returns

Reference to this string.

Definition at line 669 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::push_back()`.

Append an `initializer_list` of characters.

## Parameters

|                  |                                                                 |
|------------------|-----------------------------------------------------------------|
| <code>__l</code> | The <code>initializer_list</code> of characters to be appended. |
|------------------|-----------------------------------------------------------------|

## Returns

Reference to this string.

Definition at line 682 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append()`.

**4.18.3.81** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator=( const __versa_string<_CharT, _Traits, _Alloc, _Base > &__str ) [inline]`

Assign the value of `str` to this string.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

Definition at line 256 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign()`.

```
4.18.3.82 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
 class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator= (
 __versa_string<_CharT, _Traits, _Alloc, _Base> && __str) [inline], [noexcept]
```

String move assignment operator.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

The contents of `__str` are moved into this string (without copying). `__str` is a valid, but unspecified string.

Definition at line 268 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::swap()`.

```
4.18.3.83 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
 class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator= (
 std::initializer_list<_CharT> __l) [inline]
```

Set value to string constructed from initializer list.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__l</code> | <code>std::initializer_list</code> . |
|------------------|--------------------------------------|

Definition at line 280 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign()`.

```
4.18.3.84 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
 _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator= (const
 _CharT* __s) [inline]
```

Copy contents of `__s` into this string.

## Parameters

|                  |                                |
|------------------|--------------------------------|
| <code>__s</code> | Source null-terminated string. |
|------------------|--------------------------------|

Definition at line 292 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign()`.

```
4.18.3.85 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
 _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator= (_CharT __c
) [inline]
```

Set value to string of length 1.

## Parameters

---

|                  |                   |
|------------------|-------------------|
| <code>__c</code> | Source character. |
|------------------|-------------------|

Assigning to a character makes this string length 1 and `(*this)[0] == __c`.

Definition at line 303 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign()`.

**4.18.3.86** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator[] ( size_type __pos ) const [inline], [noexcept]`

Subscript access to the data contained in the string.

#### Parameters

|                    |                                       |
|--------------------|---------------------------------------|
| <code>__pos</code> | The index of the character to access. |
|--------------------|---------------------------------------|

#### Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Definition at line 537 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::back()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::front()`.

Subscript access to the data contained in the string.

#### Parameters

|                    |                                       |
|--------------------|---------------------------------------|
| <code>__pos</code> | The index of the character to access. |
|--------------------|---------------------------------------|

#### Returns

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.) Unshares the string.

Definition at line 554 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

**4.18.3.88** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::pop_back ( ) [inline]`

Remove the last character.

The string must be non-empty.

Definition at line 1235 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

4.18.3.89 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class  
_Base> void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back ( _CharT __c )  
[inline]`

Append a single character.

## Parameters

|                  |                      |
|------------------|----------------------|
| <code>__c</code> | Character to append. |
|------------------|----------------------|

Replace characters with value from another string.

## Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__pos</code> | Index of first character to replace. |
| <code>__n</code>   | Number of characters to be replaced. |
| <code>__str</code> | String to insert.                    |

## Returns

Reference to this string.

## Exceptions

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |

Removes the characters in the range `[pos,pos+n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1257 of file `vstring.h`.

Replace characters with value from another string.

## Parameters

|                     |                                         |
|---------------------|-----------------------------------------|
| <code>__pos1</code> | Index of first character to replace.    |
| <code>__n1</code>   | Number of characters to be replaced.    |
| <code>__str</code>  | String to insert.                       |
| <code>__pos2</code> | Index of first character of str to use. |
| <code>__n2</code>   | Number of characters from str to use.   |

## Returns

Reference to this string.

## Exceptions

|                                |                                                                             |
|--------------------------------|-----------------------------------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; str.size()</code> . |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .                             |

Removes the characters in the range `[pos1,pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__l</code> | The initializer_list of characters to insert. |
|------------------|-----------------------------------------------|

### Returns

Reference to this string.

### Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1582 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

4.18.3.105 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::reserve ( size_type __res_arg = 0 )`  
[inline]

Attempt to preallocate enough memory for specified number of characters.

### Parameters

|                        |                                |
|------------------------|--------------------------------|
| <code>__res_arg</code> | Number of characters required. |
|------------------------|--------------------------------|

### Exceptions

|                                |                                                             |
|--------------------------------|-------------------------------------------------------------|
| <code>std::length_error</code> | If <code>__res_arg</code> exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------------------|

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Definition at line 507 of file `vstring.h`.

Referenced by `__gnu_cxx::operator+()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::shrink_to_fit()`.

4.18.3.106 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::resize ( size_type __n, _CharT __c )`

Resizes the string to the specified number of characters.

### Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__n</code> | Number of characters the string should contain. |
| <code>__c</code> | Character to fill any new elements.             |

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

Definition at line 50 of file `vstring.tcc`.

References `std::size()`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::resize()`.

```
4.18.3.107 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::resize (size_type __n)
[inline]
```

Resizes the string to the specified number of characters.

## Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__n</code> | Number of characters the string should contain. |
|------------------|-------------------------------------------------|

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.

Definition at line 463 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize()`.

4.18.3.108 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rfind ( const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str, size_type __pos = npos ) const [inline], [noexcept]`

Find last position of a string.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String to locate.                                     |
| <code>__pos</code> | Index of character to search back from (default end). |

## Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1738 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_last_of()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rfind()`.

Find last position of a C substring.

## Parameters

|                    |                                            |
|--------------------|--------------------------------------------|
| <code>__s</code>   | C string to locate.                        |
| <code>__pos</code> | Index of character to search back from.    |
| <code>__n</code>   | Number of characters from s to search for. |

#### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 313 of file `vstring.tcc`.

References `std::min()`, and `std::size()`.

```
4.18.3.110 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
 _Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::rfind (const _CharT * __s,
 size_type __pos = npos) const [inline]
```

Find last position of a C string.

## Parameters

|                    |                                                      |
|--------------------|------------------------------------------------------|
| <code>__s</code>   | C string to locate.                                  |
| <code>__pos</code> | Index of character to start search at (default end). |

## Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1768 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rfind()`.

```
4.18.3.111 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string< _CharT, _Traits, _Alloc, _Base>::size_type __gnu_cxx::__versa_string< _CharT,
_Traits, _Alloc, _Base>::rfind(_CharT __c, size_type __pos = npos) const [noexcept]
```

Find last position of a character.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__c</code>   | Character to locate.                                  |
| <code>__pos</code> | Index of character to search back from (default end). |

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 335 of file `vstring.tcc`.

References `std::size()`.

```
4.18.3.112 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base>::shrink_to_fit() [inline],
[noexcept]
```

A non-binding request to reduce capacity() to size().

Definition at line 469 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::capacity()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::reserve()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

```
4.18.3.113 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base>::size() const [inline],
[noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Definition at line 425 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::at()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::back()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _`

4.18.3.114 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::substr ( size_type __pos = 0, size_type __n = npos ) const [inline]`

Get a substring.

Parameters

|                    |                                                        |
|--------------------|--------------------------------------------------------|
| <code>__pos</code> | Index of first character (default 0).                  |
| <code>__n</code>   | Number of characters in substring (default remainder). |

Returns

The new string.

Exceptions

|                                |                                     |
|--------------------------------|-------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos &gt; size()</code> . |
|--------------------------------|-------------------------------------|

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

Definition at line 2052 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::__versa_string()`.

4.18.3.115 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::swap ( __versa_string<_CharT, _Traits, _Alloc, _Base > & __s ) [inline], [noexcept]`

Swap contents with another string.

Parameters

|                  |                      |
|------------------|----------------------|
| <code>__s</code> | String to swap with. |
|------------------|----------------------|

Exchanges the contents of this string with that of `__s` in constant time.

Definition at line 1636 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator=()`, and `__gnu_cxx::swap()`.

#### 4.18.4 Member Data Documentation

4.18.4.1 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::npos [static]`

Value returned by various member functions when they fail.

Definition at line 81 of file `vstring.h`.

#### 4.19 `__gnu_cxx::_Caster<_ToType>` Struct Template Reference

##### Public Types

- `typedef _ToType::element_type * type`

##### 4.19.1 Detailed Description

```
template<typename _ToType>struct __gnu_cxx::_Caster<_ToType>
```

These functions are here to allow containers to support non standard pointer types. For normal pointers, these resolve to the use of the standard cast operation. For other types the functions will perform the appropriate cast to/from the custom pointer class so long as that class meets the following conditions: 1) has a `typedef element_type` which names the type it points to. 2) has a `get()` const method which returns `element_type*`. 3) has a constructor which can take one `element_type*` argument. This type supports the semantics of the pointer cast operators (below.)

Definition at line 52 of file `cast.h`.

The documentation for this struct was generated from the following file:

- [cast.h](#)

#### 4.20 `__gnu_cxx::_Char_types<_CharT>` Struct Template Reference

##### Public Types

- `typedef unsigned long int_type`
- `typedef std::streamoff off_type`
- `typedef std::streampos pos_type`
- `typedef std::mbstate\_t state_type`

##### 4.20.1 Detailed Description

```
template<typename _CharT>struct __gnu_cxx::_Char_types<_CharT>
```

Mapping from character type to associated types.

##### Note

This is an implementation class for the generic version of `char_traits`. It defines `int_type`, `off_type`, `pos_type`, and `state_type`. By default these are unsigned long, `streamoff`, `streampos`, and `mbstate_t`. Users who need a different set of types, but who don't need to change the definitions of any function defined in `char_traits`, can specialize `__gnu_cxx::_Char_types` while leaving `__gnu_cxx::char_traits` alone.

Definition at line 58 of file `char_traits.h`.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

#### 4.23.1 Detailed Description

```
template<typename _Storage_policy>class __gnu_cxx::_Pointer_adapter< _Storage_policy >
```

The following provides an 'alternative pointer' that works with the containers when specified as the pointer typedef of the allocator.

The pointer type used with the containers doesn't have to be this class, but it must support the implicit conversions, pointer arithmetic, comparison operators, etc. that are supported by this class, and avoid raising compile-time ambiguities. Because creating a working pointer can be challenging, this pointer template was designed to wrapper an easier storage policy type, so that it becomes reusable for creating other pointer types.

A key point of this class is also that it allows container writers to 'assume' `Allocator::pointer` is a typedef for a normal pointer. This class supports most of the conventions of a true pointer, and can, for instance handle implicit conversion to const and base class pointer types. The only impositions on container writers to support extended pointers are: 1) use the `Allocator::pointer` typedef appropriately for pointer types. 2) if you need pointer casting, use the `__pointer_cast<>` functions from `ext/cast.h`. This allows pointer cast operations to be overloaded as necessary by custom pointers.

Note: The const qualifier works with this pointer adapter as follows:

```
_Tp* == _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* == _Pointer_adapter<_Std_pointer_impl<const
_Tp> >; _Tp* const == const _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* const == const _Pointer_
adapter<_Std_pointer_impl<const _Tp> >;
```

Definition at line 281 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 4.24 \_\_gnu\_cxx::\_Relative\_pointer\_impl< \_Tp > Class Template Reference

### Public Types

- typedef `_Tp` **element\_type**

### Public Member Functions

- `_Tp *` **get** () const
- bool **operator<** (const [\\_Relative\\_pointer\\_impl](#) &\_\_rarg) const
- bool **operator==** (const [\\_Relative\\_pointer\\_impl](#) &\_\_rarg) const
- void **set** (`_Tp *`\_\_arg)

#### 4.24.1 Detailed Description

```
template<typename _Tp>class __gnu_cxx::_Relative_pointer_impl< _Tp >
```

A storage policy for use with `_Pointer_adapter<>` which stores the pointer's address as an offset value which is relative to its own address.

This is intended for pointers within shared memory regions which might be mapped at different addresses by different processes. For null pointers, a value of 1 is used. (0 is legitimate sometimes for nodes in circularly linked lists) This value was chosen as the least likely to generate an incorrect null, As there is no reason why any normal pointer would point 1 byte into its own pointer address.

Definition at line 109 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 4.25 `__gnu_cxx::_Relative_pointer_impl< const _Tp >` Class Template Reference

### Public Types

- typedef const \_Tp **element\_type**

### Public Member Functions

- const \_Tp \* **get** () const
- bool **operator**< (const [\\_Relative\\_pointer\\_impl](#) &\_\_rarg) const
- bool **operator**== (const [\\_Relative\\_pointer\\_impl](#) &\_\_rarg) const
- void **set** (const \_Tp \*\_\_arg)

#### 4.25.1 Detailed Description

```
template<typename _Tp>class __gnu_cxx::_Relative_pointer_impl< const _Tp >
```

`Relative_pointer_impl` needs a specialization for const T because of the casting done during pointer arithmetic.

Definition at line 161 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 4.26 `__gnu_cxx::_Std_pointer_impl< _Tp >` Class Template Reference

### Public Types

- typedef \_Tp **element\_type**

### Public Member Functions

- \_Tp \* **get** () const
- bool **operator**< (const [\\_Std\\_pointer\\_impl](#) &\_\_rarg) const
- bool **operator**== (const [\\_Std\\_pointer\\_impl](#) &\_\_rarg) const
- void **set** (element\_type \*\_\_arg)

#### 4.26.1 Detailed Description

```
template<typename _Tp>class __gnu_cxx::Std_pointer_impl< _Tp >
```

A storage policy for use with `_Pointer_adapter<>` which yields a standard pointer.

A `_Storage_policy` is required to provide 4 things: 1) A `get()` API for returning the stored pointer value. 2) An `set()` API for storing a pointer value. 3) An `element_type` typedef to define the type this points to. 4) An `operator<()` to support pointer comparison. 5) An `operator==()` to support pointer comparison.

Definition at line 66 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

### 4.27 \_\_gnu\_cxx::Unqualified\_type< \_Tp > Struct Template Reference

#### Public Types

- typedef `_Tp type`

#### 4.27.1 Detailed Description

```
template<typename _Tp>struct __gnu_cxx::Unqualified_type< _Tp >
```

This structure accommodates the way in which `std::iterator_traits<>` is normally specialized for `const T*`, so that `value_type` is still `T`.

Definition at line 241 of file `pointer.h`.

The documentation for this struct was generated from the following file:

- [pointer.h](#)

### 4.28 \_\_gnu\_cxx::annotate\_base Struct Reference

Inheritance diagram for `__gnu_cxx::annotate_base`:

4.30 `__gnu_cxx::array_allocator_base<_Tp>` Class Template Reference

Inheritance diagram for `__gnu_cxx::array_allocator_base<_Tp>`:

## Public Types

- typedef const `_Tp` \* **const\_pointer**
- typedef const `_Tp` & **const\_reference**
- typedef ptrdiff\_t **difference\_type**
- typedef `_Tp` \* **pointer**
- typedef `_Tp` & **reference**
- typedef size\_t **size\_type**
- typedef `_Tp` **value\_type**

## Public Member Functions

- pointer **address** (reference `__x`) const noexcept
- const\_pointer **address** (const\_reference `__x`) const noexcept
- template<typename `_Up`, typename... `_Args`>  
void **construct** (`_Up` \*`__p`, `_Args` &&... `__args`)
- void **deallocate** (pointer, size\_type)
- template<typename `_Up`>  
void **destroy** (`_Up` \*`__p`)
- size\_type **max\_size** () const noexcept

## 4.30.1 Detailed Description

```
template<typename _Tp> class __gnu_cxx::array_allocator_base<_Tp>
```

Base class.

Definition at line 50 of file `array_allocator.h`.

The documentation for this class was generated from the following file:

- [array\\_allocator.h](#)

#### 4.31 `__gnu_cxx::binary_compose<_Operation1, _Operation2, _Operation3>` Class Template Reference

Inheritance diagram for `__gnu_cxx::binary_compose<_Operation1, _Operation2, _Operation3>`:

##### Public Types

- typedef `_Arg` [argument\\_type](#)
- typedef `_Result` [result\\_type](#)

##### Public Member Functions

- **binary\_compose** (const `_Operation1` &\_\_x, const `_Operation2` &\_\_y, const `_Operation3` &\_\_z)
- `_Operation1::result_type` **operator()** (const typename `_Operation2::argument_type` &\_\_x) const

##### Protected Attributes

- `_Operation1` **\_M\_fn1**
- `_Operation2` **\_M\_fn2**
- `_Operation3` **\_M\_fn3**

##### 4.31.1 Detailed Description

```
template<class _Operation1, class _Operation2, class _Operation3>class __gnu_cxx::binary_compose<_Operation1, _Operation2, _Operation3>
```

An [SGI extension](#) .

Definition at line 150 of file `ext/functional`.

##### 4.31.2 Member Typedef Documentation

4.31.2.1 `template<typename _Arg, typename _Result> typedef _Arg std::unary_function< _Arg, _Result >::argument_type`  
`[inherited]`

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

4.31.2.2 `template<typename _Arg, typename _Result> typedef _Result std::unary_function< _Arg, _Result >::result_type`  
`[inherited]`

`result_type` is the return type

Definition at line 111 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [ext/functional](#)

## 4.32 \_\_gnu\_cxx::bitmap\_allocator< typename > Class Template Reference

Inheritance diagram for `__gnu_cxx::bitmap_allocator< typename >`:

### Public Types

- `typedef free_list::__mutex_type __mutex_type`
- `typedef const _Tp * const_pointer`
- `typedef const _Tp & const_reference`
- `typedef ptrdiff_t difference_type`
- `typedef _Tp * pointer`
- `typedef std::true\_type propagate_on_container_move_assignment`
- `typedef _Tp & reference`
- `typedef size_t size_type`
- `typedef _Tp value_type`

### Public Member Functions

- `bitmap_allocator (const bitmap\_allocator &) noexcept`

- `template<typename _Tp1 >`  
`bitmap_allocator` (const `bitmap_allocator`< \_Tp1 > &) noexcept
- pointer `_M_allocate_single_object` () throw (std::bad\_alloc)
- void `_M_deallocate_single_object` (pointer \_\_p) throw ()
- pointer `address` (reference \_\_r) const noexcept
- const\_pointer `address` (const\_reference \_\_r) const noexcept
- pointer `allocate` (size\_type \_\_n)
- pointer `allocate` (size\_type \_\_n, typename `bitmap_allocator`< void >::const\_pointer)
- `template<typename _Up, typename... _Args>`  
void `construct` (\_Up \*\_\_p, \_Args &&... \_\_args)
- void `deallocate` (pointer \_\_p, size\_type \_\_n) throw ()
- `template<typename _Up >`  
void `destroy` (\_Up \*\_\_p)
- size\_type `max_size` () const noexcept

### Private Types

- typedef vector\_type::iterator `iterator`
- typedef  
`__detail::__mini_vector`  
< value\_type > `vector_type`

### Private Member Functions

- void `_M_clear` ()
- size\_t \* `_M_get` (size\_t \_\_sz) throw (std::bad\_alloc)
- void `_M_insert` (size\_t \*\_\_addr) throw ()

### 4.32.1 Detailed Description

`template<typename>class __gnu_cxx::bitmap_allocator< typename >`

Bitmap Allocator, primary template.

Definition at line 59 of file ext/alloc\_traits.h.

### 4.32.2 Member Function Documentation

4.32.2.1 `template<typename > pointer __gnu_cxx::bitmap_allocator< typename >::_M_allocate_single_object ( ) throw std::bad_alloc` [inline]

Allocates memory for a single object of size sizeof(\_Tp).

#### Exceptions

|                              |                                 |
|------------------------------|---------------------------------|
| <code>std::bad_alloc.</code> | If memory can not be allocated. |
|------------------------------|---------------------------------|

Complexity: Worst case complexity is O(N), but that is hardly ever hit. If and when this particular case is encountered, the next few cases are guaranteed to have a worst case complexity of O(1)! That's why this function performs very well on average. You can consider this function to have a complexity referred to commonly as: Amortized Constant time.

Definition at line 827 of file bitmap\_allocator.h.

References `__gnu_cxx::__detail::__bit_allocate()`, `__gnu_cxx::__detail::__num_bitmaps()`, and `__gnu_cxx::_Bit_scan_forward()`.

4.32.2.2 `template<typename> void __gnu_cxx::bitmap_allocator< typename>::_M_deallocate_single_object ( pointer __p ) throw ) [inline]`

Deallocates memory that belongs to a single object of size `sizeof(_Tp)`.

Complexity:  $O(\lg(N))$ , but the worst case is not hit often! This is because containers usually deallocate memory close to each other and this case is handled in  $O(1)$  time by the `deallocate` function.

Definition at line 917 of file `bitmap_allocator.h`.

References `__gnu_cxx::__detail::__bit_free()`, `__gnu_cxx::__detail::__num_bitmaps()`, `std::__rotate()`, and `__gnu_cxx::__free_list::_M_insert()`.

The documentation for this class was generated from the following files:

- [ext/alloc\\_traits.h](#)
- [bitmap\\_allocator.h](#)

### 4.33 `__gnu_cxx::char_traits<_CharT>` Struct Template Reference

Inheritance diagram for `__gnu_cxx::char_traits<_CharT>`:

#### Public Types

- `typedef _CharT char_type`
- `typedef _Char_types<_CharT>::int_type int_type`
- `typedef _Char_types<_CharT>::off_type off_type`
- `typedef _Char_types<_CharT>::pos_type pos_type`
- `typedef _Char_types<_CharT>::state_type state_type`

### Static Public Member Functions

- static void **assign** (char\_type &\_\_c1, const char\_type &\_\_c2)
- static char\_type \* **assign** (char\_type \*\_\_s, std::size\_t \_\_n, char\_type \_\_a)
- static int **compare** (const char\_type \*\_\_s1, const char\_type \*\_\_s2, std::size\_t \_\_n)
- static char\_type \* **copy** (char\_type \*\_\_s1, const char\_type \*\_\_s2, std::size\_t \_\_n)
- static constexpr int\_type **eof** ()
- static constexpr bool **eq** (const char\_type &\_\_c1, const char\_type &\_\_c2)

- static constexpr int\_type **not\_eof** (const int\_type &\_\_c)
- static constexpr char\_type **to\_char\_type** (const int\_type &\_\_c)
- static constexpr int\_type **to\_int\_type** (const char\_type &\_\_c)

#### 4.33.1 Detailed Description

```
template<typename _CharT>struct __gnu_cxx::char_traits< _CharT >
```

Base class used to implement std::char\_traits.

#### Note

For any given actual character type, this definition is probably wrong. (Most of the member functions are likely to be right, but the int\_type and state\_type typedefs, and the eof() member function, are likely to be wrong.) The reason this class exists is so users can specialize it. Classes in namespace std may not be specialized for fundamental types, but classes in namespace \_\_gnu\_cxx may be.

See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt05ch13s03.html> for advice on how to make use of this class for *unusual* character types. Also, check out include/ext/pod\_char\_traits.h.

Definition at line 83 of file char\_traits.h.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

### 4.34 \_\_gnu\_cxx::character< \_Value, \_Int, \_St > Struct Template Reference

#### Public Types

- typedef [character](#)< \_Value, \_Int, \_St > **char\_type**
- typedef \_Int **int\_type**
- typedef \_St **state\_type**
- typedef \_Value **value\_type**

## Static Public Member Functions

- `template<typename V2 >`  
static `char_type` **from** (const V2 &v)
- `template<typename V2 >`  
static V2 **to** (const `char_type` &c)

## Public Attributes

- `value_type` **value**

## 4.34.1 Detailed Description

`template<typename _Value, typename _Int, typename _St = std::mbstate_t>struct __gnu_cxx::character< _Value, _Int, _St >`

A POD class that serves as a character abstraction class.

Definition at line 49 of file `pod_char_traits.h`.

The documentation for this struct was generated from the following file:

- [pod\\_char\\_traits.h](#)

## 4.35 \_\_gnu\_cxx::condition\_base Struct Reference

Inheritance diagram for `__gnu_cxx::condition_base`:

## 4.35.1 Detailed Description

Base struct for condition policy.

Requires a public member function with the signature `void throw_conditionally()`

Definition at line 403 of file `throw_allocator.h`.

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

#### 4.36 `__gnu_cxx::constant_binary_fun<_Result, _Arg1, _Arg2>` Struct Template Reference

Inherits `__gnu_cxx::Constant_binary_fun<_Result, _Arg1, _Arg2>`.

##### Public Types

- typedef `_Arg1` **first\_argument\_type**
- typedef `_Result` **result\_type**
- typedef `_Arg2` **second\_argument\_type**

##### Public Member Functions

- **constant\_binary\_fun** (const `_Result` &\_\_v)
- const `result_type` & **operator()** (const `_Arg1` &, const `_Arg2` &) const

##### Public Attributes

- `_Result` **M\_val**

##### 4.36.1 Detailed Description

```
template<class _Result, class _Arg1 = _Result, class _Arg2 = _Arg1>struct __gnu_cxx::constant_binary_fun<_Result, _Arg1, _Arg2>
```

An [SGI extension](#) .

Definition at line 320 of file `ext/functional`.

The documentation for this struct was generated from the following file:

- [ext/functional](#)

#### 4.37 `__gnu_cxx::constant_unary_fun<_Result, _Argument>` Struct Template Reference

Inherits `__gnu_cxx::Constant_unary_fun<_Result, _Argument>`.

##### Public Types

- typedef `_Argument` **argument\_type**
- typedef `_Result` **result\_type**

##### Public Member Functions

- **constant\_unary\_fun** (const `_Result` &\_\_v)
- const `result_type` & **operator()** (const `_Argument` &) const

##### Public Attributes

- `result_type` **M\_val**

## 4.37.1 Detailed Description

```
template<class _Result, class _Argument = _Result>struct __gnu_cxx::constant_unary_fun<_Result, _Argument>
```

An [SGI extension](#) .

Definition at line 312 of file `ext/functional`.

The documentation for this struct was generated from the following file:

- [ext/functional](#)

4.38 `__gnu_cxx::constant_void_fun<_Result>` Struct Template Reference

Inherits `__gnu_cxx::Constant_void_fun<_Result>`.

## Public Types

- typedef `_Result` **result\_type**

## Public Member Functions

- **constant\_void\_fun** (const `_Result` &\_\_v)
- const `result_type` & **operator()** () const

## Public Attributes

- `result_type` **\_M\_val**

## 4.38.1 Detailed Description

```
template<class _Result>struct __gnu_cxx::constant_void_fun<_Result>
```

An [SGI extension](#) .

Definition at line 303 of file `ext/functional`.

The documentation for this struct was generated from the following file:

- [ext/functional](#)

4.39 `__gnu_cxx::debug_allocator<_Alloc>` Class Template Reference

## Public Types

- typedef `_Traits::const_pointer` **const\_pointer**
- typedef `_Traits::const_reference` **const\_reference**
- typedef `_Traits::difference_type` **difference\_type**
- typedef `_Traits::pointer` **pointer**

#### 4.40.1 Detailed Description

`template<typename _CharT>class __gnu_cxx::enc_filebuf<_CharT>`

class `enc_filebuf`.

Definition at line 42 of file `enc_filebuf.h`.

#### 4.40.2 Member Function Documentation

4.40.2.1 `void std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_create_pback( ) [inline], [protected], [inherited]`

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back  
Definition at line 177 of file `fstream`.

4.40.2.2 `void std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_destroy_pback( ) throw [inline], [protected], [inherited]`

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.  
Definition at line 194 of file `fstream`.

4.40.2.3 `void std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_set_buffer( streamsize __off ) [inline], [protected], [inherited]`

This function sets the pointers of the internal buffer, both get and put areas. Typically:

`__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: `epptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 397 of file `fstream`.

4.40.2.4 `__filebuf_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::close( ) [inherited]`

Closes the currently associated file.

##### Returns

`this` on success, `NULL` on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

4.40.2.5 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::eback( ) const [inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 482 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_streambuf< char, char_traits< char >>::sputbackc()`, and `std::basic_streambuf< char, char_traits< char >>::sungetc()`.

4.40.2.6 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::egptr ( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 488 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::M_create_pback()`, `std::basic_streambuf< char, char_traits< char > >::in_avail()`, `std::basic_streambuf< char, char_traits< char > >::sbumpc()`, `std::basic_streambuf< char, char_traits< char > >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::str()`.

4.40.2.7 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::eptr ( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

Definition at line 535 of file `streambuf`.

Referenced by `std::basic_streambuf< char, char_traits< char > >::sputc()`.

4.40.2.8 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::gbump ( int __n )` `[inline]`, `[protected]`, `[inherited]`

Moving the read position.

Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the read position without returning any data.

Definition at line 498 of file `streambuf`.

Referenced by `std::basic_streambuf< char, char_traits< char > >::sbumpc()`, `std::basic_streambuf< char, char_traits< char > >::sputbackc()`, `std::basic_streambuf< char, char_traits< char > >::sungetc()`, and `std::basic_streambuf< char, char_traits< char > >::uflow()`.

4.40.2.9 `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::getloc ( ) const` `[inline]`, `[inherited]`

Locale access.

**Returns**

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 226 of file `streambuf`.

Referenced by `std::basic_streambuf< char, char_traits< char > >::pubimbue()`.

**4.40.2.10** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::gptr ( ) const` `[inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 485 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_streambuf< char, char_traits< char > >::in_avail()`, `std::basic_streambuf< char, char_traits< char > >::sbumpc()`, `std::basic_streambuf< char, char_traits< char > >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_streambuf< char, char_traits< char > >::sputbackc()`, `std::basic_streambuf< char, char_traits< char > >::sungetc()`, and `std::basic_streambuf< char, char_traits< char > >::uflow()`.

**4.40.2.11** `virtual void std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::imbue ( const locale & __loc )` `[protected], [virtual], [inherited]`

Changes translations.

**Parameters**

|                    |               |
|--------------------|---------------|
| <code>__loc</code> | A new locale. |
|--------------------|---------------|

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

**Note**

Base class version does nothing.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

**4.40.2.12** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( )` `[inline], [inherited]`

Looking ahead into the stream.

**Returns**

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 284 of file `streambuf`.

**4.40.2.13** `bool std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::is_open ( ) const throw ( )` `[inline]`, `[inherited]`

Returns true if the external file is open.

Definition at line 227 of file `fstream`.

**4.40.2.14** `__filebuf_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::open ( const char * __s, ios_base::openmode __mode )` `[inherited]`

Opens an external file.

**Parameters**

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

**Returns**

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named `__s` using the flags given in `__mode`.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines `app`, `in|out|app`, `in|app`, `binary|app`, `binary|in|out|app`, and `binary|in|app` per DR 596)

| ios_base Flag combination |    |     |       |     | stdio equivalent |
|---------------------------|----|-----|-------|-----|------------------|
| binary                    | in | out | trunc | app |                  |
|                           |    | +   |       |     | w                |
|                           |    | +   |       | +   | a                |
|                           |    |     |       | +   | a                |
|                           |    | +   | +     |     | w                |
|                           | +  |     |       |     | r                |
|                           | +  | +   |       |     | r+               |
|                           | +  | +   | +     |     | w+               |
|                           | +  | +   |       | +   | a+               |
|                           | +  |     |       | +   | a+               |
| +                         |    | +   |       |     | wb               |
| +                         |    | +   |       | +   | ab               |
| +                         |    |     |       | +   | ab               |
| +                         |    | +   | +     |     | wb               |
| +                         | +  |     |       |     | rb               |
| +                         | +  | +   |       |     | r+b              |
| +                         | +  | +   | +     |     | w+b              |
| +                         | +  | +   |       | +   | a+b              |
| +                         | +  |     |       | +   | a+b              |

4.40.2.15 `__filebuf_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::open ( const std::string & __s, ios_base::openmode __mode ) [inline], [inherited]`

Opens an external file.

## Parameters

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

## Returns

`this` on success, `NULL` on failure

Definition at line 282 of file `fstream`.

**4.40.2.16** `virtual int_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::overflow ( int_type __c = _Traits::eof() )` [protected],[virtual],[inherited]

Consumes data from the buffer; writes to the controlled sequence.

## Parameters

|                  |                                     |
|------------------|-------------------------------------|
| <code>__c</code> | An additional character to consume. |
|------------------|-------------------------------------|

## Returns

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

## Note

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

**4.40.2.17** `virtual int_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::pbackfail ( int_type __c = _Traits::eof() )` [protected],[virtual],[inherited]

Tries to back up the input sequence.

## Parameters

|                  |                                                      |
|------------------|------------------------------------------------------|
| <code>__c</code> | The character to be inserted back into the sequence. |
|------------------|------------------------------------------------------|

## Returns

`eof()` on failure, *some other value* on success

## Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

## Note

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

4.40.2.18 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::pbase ( ) const [inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 529 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

4.40.2.19 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::pbump ( int __n ) [inline], [protected], [inherited]`

Moving the write position.

Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the write position without returning any data.

Definition at line 545 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::sputc()`.

4.40.2.20 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::pptr ( ) const [inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 532 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::sputc()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

4.40.2.21 `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::pubimbue ( const locale & __loc ) [inline], [inherited]`

Entry point for `imbue()`.

Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

**Returns**

The previous locale.

Calls the derived `imbue(__loc)`.

Definition at line 209 of file `streambuf`.

**4.40.2.22** `template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<_CharT, _Traits>::pubseekoff ( off_type __off, ios_base::seekdir __way, ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline],[inherited]`

Alters the stream position.

**Parameters**

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__off</code>  | Offset.                                     |
| <code>__way</code>  | Value for <code>ios_base::seekdir</code> .  |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual `seekoff` function.

Definition at line 251 of file `streambuf`.

**4.40.2.23** `template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<_CharT, _Traits>::pubseekpos ( pos_type __sp, ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline],[inherited]`

Alters the stream position.

**Parameters**

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__sp</code>   | Position                                    |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual `seekpos` function.

Definition at line 263 of file `streambuf`.

**4.40.2.24** `template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_streambuf* std::basic_streambuf<_CharT, _Traits>::pubsetbuf ( char_type *__s, streamsize __n ) [inline],[inherited]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 239 of file `streambuf`.

**4.40.2.25** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int std::basic_streambuf<_CharT, _Traits>::pubsync ( ) [inline],[inherited]`

Calls virtual `sync` function.

Definition at line 271 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::sync()`.

4.40.2.26 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sbumpc ( ) [inline], [inherited]`

Getting the next character.

#### Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 316 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, and `std::basic_streambuf<char, char_traits<char>>::snextc()`.

4.40.2.27 `virtual pos_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::seekoff ( off_type __off, ios_base::seekdir __way, ios_base::openmode __mode = ios_base::in | ios_base::out ) [protected], [virtual], [inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

4.40.2.28 `virtual pos_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::seekpos ( pos_type __pos, ios_base::openmode __mode = ios_base::in | ios_base::out ) [protected], [virtual], [inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

4.40.2.29 `virtual __streambuf_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::setbuf ( char_type* __s, streamsize __n ) [protected], [virtual], [inherited]`

Manipulates the buffer.

#### Parameters

|                  |                           |
|------------------|---------------------------|
| <code>__s</code> | Pointer to a buffer area. |
|------------------|---------------------------|

|                  |                            |
|------------------|----------------------------|
| <code>__n</code> | Size of <code>__s</code> . |
|------------------|----------------------------|

**Returns**

`this`

If no file has been opened, and both `__s` and `__n` are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.-html> for more.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

4.40.2.30 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::setg( char_type * __gbeg, char_type * __gnext, char_type * __gend )` `[inline]`, `[protected]`, `[inherited]`

Setting the three read area pointers.

**Parameters**

|                      |            |
|----------------------|------------|
| <code>__gbeg</code>  | A pointer. |
| <code>__gnext</code> | A pointer. |
| <code>__gend</code>  | A pointer. |

**Postcondition**

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Definition at line 509 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, and `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

4.40.2.31 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::setp( char_type * __pbeg, char_type * __pend )` `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

**Parameters**

|                     |            |
|---------------------|------------|
| <code>__pbeg</code> | A pointer. |
| <code>__pend</code> | A pointer. |

**Postcondition**

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Definition at line 555 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

4.40.2.32 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sgetc( )` `[inline]`, `[inherited]`

Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 338 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_streambuf<char, char_traits<char>>::snextc()`.

**4.40.2.33** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sgetn ( char_type * __s, streamsize __n ) [inline], [inherited]`

Entry point for `xsgetn`.

**Parameters**

|                  |                |
|------------------|----------------|
| <code>__s</code> | A buffer area. |
| <code>__n</code> | A count.       |

Returns `xsgetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

Definition at line 357 of file `streambuf`.

**4.40.2.34** `virtual streamsize std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::showmanyc ( ) [protected], [virtual], [inherited]`

Investigating the data available.

**Returns**

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1*

**Note**

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

**4.40.2.35** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::snextc ( ) [inline], [inherited]`

Getting the next character.

**Returns**

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 298 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**4.40.236** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sputbackc( char_type __c ) [inline], [inherited]`

Pushing characters back into the input stream.

**Parameters**

|                  |                             |
|------------------|-----------------------------|
| <code>__c</code> | The character to push back. |
|------------------|-----------------------------|

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 372 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

**4.40.237** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sputc( char_type __c ) [inline], [inherited]`

Entry point for all single-character output functions.

**Parameters**

|                  |                        |
|------------------|------------------------|
| <code>__c</code> | A character to output. |
|------------------|------------------------|

**Returns**

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(-__c)`.

Definition at line 424 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, and `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

**4.40.238** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sputn( const char_type * __s, streamsize __n ) [inline], [inherited]`

Entry point for all single-character output functions.

## Parameters

|                  |                     |
|------------------|---------------------|
| <code>__s</code> | A buffer read area. |
| <code>__n</code> | A count.            |

One of two public output functions.

Returns `xspn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 450 of file `streambuf`.

**4.40.2.39** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sungetc ( ) [inline], [inherited]`

Moving backwards in the input stream.

## Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 397 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::unget()`.

**4.40.2.40** `virtual int std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::sync ( void ) [protected], [virtual], [inherited]`

Synchronizes the buffer arrays with the controlled sequences.

## Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

## Note

Base class version does nothing, returns zero.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

**4.40.2.41** `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual int_type std::basic_streambuf<_CharT, _Traits>::uflow ( ) [inline], [protected], [virtual], [inherited]`

Fetches more data from the controlled sequence.

## Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 700 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::sbumpc()`.

4.40.2.42 `virtual int_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::underflow ( )`  
`[protected], [virtual], [inherited]`

Fetches more data from the controlled sequence.

#### Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

#### Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

4.40.2.43 `virtual streamsize std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::xsgetn ( char_type * __s, streamsize __n )`  
`[protected], [virtual], [inherited]`

Multiple character extraction.

#### Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | A buffer area.                          |
| <code>__n</code> | Maximum number of characters to assign. |

#### Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

4.40.2.44 `virtual streamsize std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::xspn ( const char_type * __s, streamsize __n )`  
`[protected], [virtual], [inherited]`

Multiple character insertion.

#### Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A buffer area.                         |
| <code>__n</code> | Maximum number of characters to write. |

**Returns**

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

**4.40.3 Member Data Documentation**

**4.40.3.1** `char_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_buf` [protected],  
[inherited]

Pointer to the beginning of internal buffer.

Definition at line 114 of file `fstream`.

**4.40.3.2** `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::_M_buf_locale` [protected], [inherited]

Current locale setting.

Definition at line 192 of file `streambuf`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::basic_filebuf()`, `std::basic_streambuf<char, char_traits<char>>::getloc()`, and `std::basic_streambuf<char, char_traits<char>>::pubimbue()`.

**4.40.3.3** `size_t std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_buf_size` [protected],  
[inherited]

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 121 of file `fstream`.

**4.40.3.4** `char* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_ext_buf` [protected],  
[inherited]

Buffer for external characters. Used for input when `codecvt::always_noconv() == false`. When valid, this corresponds to `eback()`.

Definition at line 156 of file `fstream`.

**4.40.3.5** `streamsize std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_ext_buf_size`  
[protected], [inherited]

Size of buffer held by `_M_ext_buf`.

Definition at line 161 of file `fstream`.

**4.40.3.6** `const char* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_ext_next` [protected],  
[inherited]

Pointers into the buffer held by `_M_ext_buf` that delimit a subsequence of bytes that have been read but not yet converted. When valid, `_M_ext_next` corresponds to `egptr()`.

Definition at line 168 of file `fstream`.

4.40.3.7 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_beg` [protected], [inherited]

Start of get area.

Definition at line 184 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::eback()`, and `std::basic_streambuf<char, char_traits<char>>::setg()`.

4.40.3.8 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_cur` [protected], [inherited]

Current read area.

Definition at line 185 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::gbump()`, `std::basic_streambuf<char, char_traits<char>>::gpptr()`, and `std::basic_streambuf<char, char_traits<char>>::setg()`.

4.40.3.9 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_end` [protected], [inherited]

End of get area.

Definition at line 186 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::egpptr()`, and `std::basic_streambuf<char, char_traits<char>>::setg()`.

4.40.3.10 `ios_base::openmode std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_mode` [protected], [inherited]

Place to stash in || out || in | out settings for current filebuf.

Definition at line 99 of file `fstream`.

4.40.3.11 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_out_beg` [protected], [inherited]

Start of put area.

Definition at line 187 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::pbase()`, and `std::basic_streambuf<char, char_traits<char>>::setp()`.

4.40.3.12 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_out_cur` [protected], [inherited]

Current put area.

Definition at line 188 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::pbump()`, `std::basic_streambuf<char, char_traits<char>>::pptr()`, and `std::basic_streambuf<char, char_traits<char>>::setp()`.

4.40.3.13 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_out_end` [protected], [inherited]

End of put area.

Definition at line 189 of file streambuf.

Referenced by `std::basic_streambuf< char, char_traits< char > >::epptr()`, and `std::basic_streambuf< char, char_traits< char > >::setp()`.

**4.40.3.14** `char_type std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_pback` [protected],  
[inherited]

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 142 of file fstream.

**4.40.3.15** `char_type* std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_pback_cur_save`  
[protected], [inherited]

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 143 of file fstream.

**4.40.3.16** `char_type* std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_pback_end_save`  
[protected], [inherited]

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 144 of file fstream.

**4.40.3.17** `bool std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_pback_init` [protected],  
[inherited]

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 145 of file fstream.

**4.40.3.18** `bool std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_reading` [protected],  
[inherited]

`_M_reading == false` && `_M_writing == false` for **uncommitted** mode; `_M_reading == true` for **read** mode; `_M_writing == true` for **write** mode;

NB: `_M_reading == true` && `_M_writing == true` is unused.

Definition at line 133 of file fstream.

#### 4.44 `__gnu_cxx::free_list` Class Reference

Inheritance diagram for `__gnu_cxx::free_list`:

##### Public Types

- typedef `__mutex` **`__mutex_type`**
- typedef `vector_type::iterator` **`iterator`**
- typedef `size_t *` **`value_type`**
- typedef   
 `__detail::__mini_vector`  
 `< value_type >` **`vector_type`**

##### Public Member Functions

- void `_M_clear` ()
- `size_t *` `_M_get` (`size_t __sz`) throw (`std::bad_alloc`)
- void `_M_insert` (`size_t *__addr`) throw ()

##### 4.44.1 Detailed Description

The free list class for managing chunks of memory to be given to and returned by the `bitmap_allocator`.

Definition at line 521 of file `bitmap_allocator.h`.

##### 4.44.2 Member Function Documentation

###### 4.44.2.1 void `__gnu_cxx::free_list::_M_clear` ( )

This function just clears the internal Free List, and gives back all the memory to the OS.

###### 4.44.2.2 `size_t*` `__gnu_cxx::free_list::_M_get` ( `size_t __sz` ) throw `std::bad_alloc`

This function gets a block of memory of the specified size from the free list.

## Parameters

|                   |                                           |
|-------------------|-------------------------------------------|
| <code>__sz</code> | The size in bytes of the memory required. |
|-------------------|-------------------------------------------|

## Returns

A pointer to the new memory block of size at least equal to that requested.

4.44.2.3 `void __gnu_cxx::free_list::_M_insert ( size_t * __addr ) throw` `[inline]`

This function returns the block of memory to the internal free list.

## Parameters

|                     |                                                                                               |
|---------------------|-----------------------------------------------------------------------------------------------|
| <code>__addr</code> | The pointer to the memory block that was given by a call to the <code>_M_get</code> function. |
|---------------------|-----------------------------------------------------------------------------------------------|

Definition at line 631 of file `bitmap_allocator.h`.

Referenced by `__gnu_cxx::bitmap_allocator<typename>::_M_deallocate_single_object()`.

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

## 4.62 \_\_gnu\_cxx::recursive\_init\_error Class Reference

Inheritance diagram for \_\_gnu\_cxx::recursive\_init\_error:

## Public Member Functions

- virtual const char \* [what](#) () const noexcept

## 4.62.1 Detailed Description

Exception thrown by \_\_cxa\_guard\_acquire.

6.7[stmt.dcl]/4: If control re-enters the declaration (recursively) while the object is being initialized, the behavior is undefined.

Since we already have a library function to handle locking, we might as well check for this situation and throw an exception. We use the second byte of the guard variable to remember that we're in the middle of an initialization.

Definition at line 694 of file cxxabi.h.

#### 4.62.2 Member Function Documentation

##### 4.62.2.1 `virtual const char* std::exception::what ( ) const` `[virtual]`, `[noexcept]`, `[inherited]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented in [std::bad\\_function\\_call](#), [std::ios\\_base::failure](#), [std::bad\\_typeid](#), [std::bad\\_cast](#), [std::runtime\\_error](#), [std::future\\_error](#), [std::bad\\_exception](#), [std::bad\\_weak\\_ptr](#), [std::logic\\_error](#), and [std::bad\\_alloc](#).

#### 4.66.1 Detailed Description

`template<class _Tp, class _Alloc = allocator<_Tp>>class __gnu_cxx::slist< _Tp, _Alloc >`

This is an SGI extension.

**Todo** Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

Definition at line 292 of file `slist`.

The documentation for this class was generated from the following file:

#### 4.67.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>> class __gnu_cxx::stdio_filebuf< _CharT, _Traits >
```

Provides a layer of compatibility for C/POSIX.

This GNU extension provides extensions for working with standard C FILE\*'s and POSIX file descriptors. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.

Definition at line 50 of file `stdio_filebuf.h`.

## 4.67.2 Constructor &amp; Destructor Documentation

4.67.2.1 `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> __gnu_cxx::stdio_filebuf<_CharT, _Traits>::stdio_filebuf( ) [inline]`

deferred initialization

Definition at line 65 of file `stdio_filebuf.h`.

4.67.2.2 `template<typename _CharT, typename _Traits> __gnu_cxx::stdio_filebuf<_CharT, _Traits>::stdio_filebuf( int __fd, std::ios_base::openmode __mode, size_t __size = static_cast<size_t>(BUFSIZ) )`

## Parameters

|                     |                                                         |
|---------------------|---------------------------------------------------------|
| <code>__fd</code>   | An open file descriptor.                                |
| <code>__mode</code> | Same meaning as in a standard filebuf.                  |
| <code>__size</code> | Optimal or preferred size of internal buffer, in chars. |

This constructor associates a file stream buffer with an open POSIX file descriptor. The file descriptor will be automatically closed when the `stdio_filebuf` is closed/destroyed.

Definition at line 128 of file `stdio_filebuf.h`.

4.67.2.3 `template<typename _CharT, typename _Traits> __gnu_cxx::stdio_filebuf<_CharT, _Traits>::stdio_filebuf( std::_c_file * __f, std::ios_base::openmode __mode, size_t __size = static_cast<size_t>(BUFSIZ) )`

## Parameters

|                     |                                                                                                    |
|---------------------|----------------------------------------------------------------------------------------------------|
| <code>__f</code>    | An open <code>FILE*</code> .                                                                       |
| <code>__mode</code> | Same meaning as in a standard filebuf.                                                             |
| <code>__size</code> | Optimal or preferred size of internal buffer, in chars. Defaults to system's <code>BUFSIZ</code> . |

This constructor associates a file stream buffer with an open C `FILE*`. The `FILE*` will not be automatically closed when the `stdio_filebuf` is closed/destroyed.

Definition at line 144 of file `stdio_filebuf.h`.

4.67.2.4 `template<typename _CharT, typename _Traits> __gnu_cxx::stdio_filebuf<_CharT, _Traits>::~~stdio_filebuf( ) [virtual]`

Closes the external data stream if the file descriptor constructor was used.

Definition at line 123 of file `stdio_filebuf.h`.

## 4.67.3 Member Function Documentation

4.67.3.1 `template<typename _CharT, typename _Traits> void std::basic_filebuf<_CharT, _Traits>::_M_create_pback( ) [inline], [protected], [inherited]`

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back

Definition at line 177 of file `fstream`.

4.67.3.2 `template<typename _CharT, typename _Traits> void std::basic_filebuf<_CharT, _Traits>::_M_destroy_pback( ) throw() [inline], [protected], [inherited]`

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 194 of file `fstream`.

4.67.3.3 `template<typename _CharT, typename _Traits> void std::basic_filebuf< _CharT, _Traits >::_M_set_buffer ( streamsize __off ) [inline], [protected], [inherited]`

This function sets the pointers of the internal buffer, both get and put areas. Typically:

`__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: `egptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 397 of file `fstream`.

4.67.3.4 `template<typename _CharT, typename _Traits> basic_filebuf< _CharT, _Traits >::_filebuf_type * std::basic_filebuf< _CharT, _Traits >::close ( ) [inherited]`

Closes the currently associated file.

#### Returns

`this` on success, NULL on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

Definition at line 128 of file `fstream.tcc`.

Referenced by `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_fstream< _CharT, _Traits >::close()`, and `std::basic_filebuf< char_type, traits_type >::~~basic_filebuf()`.

4.67.3.5 `template<typename _CharT, typename _Traits = char_traits< _CharT >> char_type* std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 482 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_streambuf< char, char_traits< char > >::sputbackc()`, and `std::basic_streambuf< char, char_traits< char > >::sungetc()`.

4.67.3.6 `template<typename _CharT, typename _Traits = char_traits< _CharT >> char_type* std::basic_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence

- `egptr()` returns the end pointer for the input sequence

Definition at line 488 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_streambuf<char, char_traits<char>>::in_avail()`, `std::basic_streambuf<char, char_traits<char>>::sbumpc()`, `std::basic_streambuf<char, char_traits<char>>::sgetc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

**4.67.3.7** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::eptr( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

Definition at line 535 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::sputc()`.

**4.67.3.8** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> int __gnu_cxx::stdio_filebuf<_CharT, _Traits>::fd( )` `[inline]`

Returns

The underlying file descriptor.

Once associated with an external data stream, this function can be used to access the underlying POSIX file descriptor. Note that there is no way for the library to track what you do with the descriptor, so be careful.

Definition at line 109 of file `stdio_filebuf.h`.

**4.67.3.9** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> std::_c_file* __gnu_cxx::stdio_filebuf<_CharT, _Traits>::file( )` `[inline]`

Returns

The underlying `FILE*`.

This function can be used to access the underlying "C" file pointer. Note that there is no way for the library to track what you do with the file, so be careful.

Definition at line 119 of file `stdio_filebuf.h`.

**4.67.3.10** `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::gbump( int __n )` `[inline]`, `[protected]`, `[inherited]`

Moving the read position.

## Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the read position without returning any data.

Definition at line 498 of file `streambuf`.

Referenced by `std::basic_streambuf< char, char_traits< char > >::sbumpc()`, `std::basic_streambuf< char, char_traits< char > >::sputbackc()`, `std::basic_streambuf< char, char_traits< char > >::sungetc()`, and `std::basic_streambuf< char, char_traits< char > >::uflow()`.

4.67.3.11 `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const` `[inline], [inherited]`

Locale access.

## Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 226 of file `streambuf`.

Referenced by `std::basic_streambuf< char, char_traits< char > >::pubimbue()`.

4.67.3.12 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::gptr ( ) const` `[inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 485 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_streambuf< char, char_traits< char > >::in_avail()`, `std::basic_streambuf< char, char_traits< char > >::sbumpc()`, `std::basic_streambuf< char, char_traits< char > >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_streambuf< char, char_traits< char > >::sputbackc()`, `std::basic_streambuf< char, char_traits< char > >::sungetc()`, and `std::basic_streambuf< char, char_traits< char > >::uflow()`.

4.67.3.13 `template<typename _CharT, typename _Traits > void std::basic_filebuf< _CharT, _Traits >::imbue ( const locale & _loc )` `[protected], [virtual], [inherited]`

Changes translations.

## Parameters

|                    |               |
|--------------------|---------------|
| <code>__loc</code> | A new locale. |
|--------------------|---------------|

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from `streambuf` can safely cache results of calls to locale functions and to members of facets so obtained.*

#### Note

Base class version does nothing.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 912 of file `fstream.tcc`.

References `std::ios_base::cur`.

4.67.3.14 `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::in_avail ( ) [inline], [inherited]`

Looking ahead into the stream.

#### Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 284 of file `streambuf`.

4.67.3.15 `template<typename _CharT, typename _Traits> bool std::basic_filebuf<_CharT, _Traits>::is_open ( ) const throw ( ) [inline], [inherited]`

Returns true if the external file is open.

Definition at line 227 of file `fstream`.

Referenced by `std::basic_ifstream<_CharT, _Traits>::is_open()`, `std::basic_ofstream<_CharT, _Traits>::is_open()`, and `std::basic_fstream<_CharT, _Traits>::is_open()`.

4.67.3.16 `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::__filebuf_type * std::basic_filebuf<_CharT, _Traits>::open ( const char * __s, ios_base::openmode __mode ) [inherited]`

Opens an external file.

#### Parameters

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

#### Returns

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named `__s` using the flags given in `__mode`.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines app, in|out|app, in|app, binary|app, binary|in|out|app, and binary|in|app per DR 596)

| ios_base Flag combination |    |     |       |     | stdio equivalent |
|---------------------------|----|-----|-------|-----|------------------|
| binary                    | in | out | trunc | app |                  |
|                           |    | +   |       |     | w                |
|                           |    | +   |       | +   | a                |
|                           |    |     |       | +   | a                |
|                           |    | +   | +     |     | w                |
|                           | +  |     |       |     | r                |
|                           | +  | +   |       |     | r+               |
|                           | +  | +   | +     |     | w+               |
|                           | +  | +   |       | +   | a+               |
|                           | +  |     |       | +   | a+               |
| +                         |    | +   |       |     | wb               |
| +                         |    | +   |       | +   | ab               |
| +                         |    |     |       | +   | ab               |
| +                         |    | +   | +     |     | wb               |
| +                         | +  |     |       |     | rb               |
| +                         | +  | +   |       |     | r+b              |
| +                         | +  | +   | +     |     | w+b              |
| +                         | +  | +   |       | +   | a+b              |
| +                         | +  |     |       | +   | a+b              |

Definition at line 94 of file fstream.tcc.

References `std::ios_base::ate`, `std::ios_base::end`, and `std::basic_filebuf< _CharT, _Traits >::open()`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`, `std::basic_filebuf< char_type, traits_type >::open()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, and `std::basic_fstream< _CharT, _Traits >::open()`.

**4.67.3.17** `template<typename _CharT, typename _Traits> __filebuf_type* std::basic_filebuf< _CharT, _Traits >::open (const std::string & __s, ios_base::openmode __mode) [inline],[inherited]`

Opens an external file.

**Parameters**

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

**Returns**

`this` on success, NULL on failure

Definition at line 282 of file fstream.

**4.67.3.18** `template<typename _CharT, typename _Traits> basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::overflow ( int_type __c = _Traits::eof() ) [protected],[virtual],[inherited]`

Consumes data from the buffer; writes to the controlled sequence.

## Parameters

|                  |                                     |
|------------------|-------------------------------------|
| <code>__c</code> | An additional character to consume. |
|------------------|-------------------------------------|

## Returns

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

## Note

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 422 of file `fstream.tcc`.

References `std::ios_base::app`, `std::ios_base::cur`, and `std::ios_base::out`.

```
4.67.3.19 template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::int_type std::basic_filebuf<
 _CharT, _Traits>::pbackfail(int_type __c = _Traits::eof()) [protected], [virtual],
 [inherited]
```

Tries to back up the input sequence.

## Parameters

|                  |                                                      |
|------------------|------------------------------------------------------|
| <code>__c</code> | The character to be inserted back into the sequence. |
|------------------|------------------------------------------------------|

## Returns

`eof()` on failure, *some other value* on success

## Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

## Note

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 363 of file `fstream.tcc`.

References `std::ios_base::cur`, and `std::ios_base::in`.

```
4.67.3.20 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT,
 _Traits>::pbase() const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 529 of file streambuf.

Referenced by std::basic\_stringbuf<\_CharT, \_Traits, \_Alloc>::str().

4.67.3.21 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::pbump ( int __n ) [inline], [protected], [inherited]`

Moving the write position.

Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the write position without returning any data.

Definition at line 545 of file streambuf.

Referenced by std::basic\_streambuf<char, char\_traits<char>>::sputc().

4.67.3.22 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::pptr ( ) const [inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 532 of file streambuf.

Referenced by std::basic\_streambuf<char, char\_traits<char>>::sputc(), and std::basic\_stringbuf<\_CharT, \_Traits, \_Alloc>::str().

4.67.3.23 `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::pubimbue ( const locale & __loc ) [inline], [inherited]`

Entry point for imbue().

Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

Returns

The previous locale.

Calls the derived imbue(\_\_loc).

Definition at line 209 of file streambuf.

4.67.3.24 `template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<_CharT, _Traits>::pubseekoff ( off_type __off, ios_base::seekdir __way, ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline],[inherited]`

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__off</code>  | Offset.                                     |
| <code>__way</code>  | Value for <code>ios_base::seekdir</code> .  |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual seekoff function.

Definition at line 251 of file streambuf.

```
4.67.3.25 template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<_CharT,
 _Traits >::pubseekpos (pos_type __sp, ios_base::openmode __mode = ios_base::in | ios_base::out)
 [inline], [inherited]
```

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__sp</code>   | Position                                    |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual seekpos function.

Definition at line 263 of file streambuf.

```
4.67.3.26 template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_streambuf*
 std::basic_streambuf<_CharT, _Traits >::pubsetbuf (char_type * __s, streamsize __n) [inline],
 [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 239 of file streambuf.

```
4.67.3.27 template<typename _CharT, typename _Traits = char_traits<_CharT>> int std::basic_streambuf<_CharT, _Traits
 >::pubsync () [inline], [inherited]
```

Calls virtual sync function.

Definition at line 271 of file streambuf.

Referenced by `std::basic_istream<_CharT, _Traits >::sync()`.

```
4.67.3.28 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT,
 _Traits >::sbumpc () [inline], [inherited]
```

Getting the next character.

## Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 316 of file streambuf.

Referenced by `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::istreambuf_iterator<_CharT, _Traits >::operator++()`, and `std::basic_streambuf<char, char_traits<char>>::snextc()`.

4.67.3.29 `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::pos_type  
std::basic_filebuf<_CharT, _Traits>::seekoff ( off_type, ios_base::seekdir, ios_base::openmode =  
ios_base::in | ios_base::out ) [protected], [virtual], [inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 715 of file `fstream.tcc`.

References `std::ios_base::cur`.

4.67.3.30 `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::pos_type std::basic_filebuf<  
_CharT, _Traits>::seekpos ( pos_type, ios_base::openmode = ios_base::in | ios_base::out )  
[protected], [virtual], [inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 775 of file `fstream.tcc`.

References `std::ios_base::beg`.

4.67.3.31 `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::__streambuf_type *  
std::basic_filebuf<_CharT, _Traits>::setbuf ( char_type * __s, streamsize __n ) [protected],  
[virtual], [inherited]`

Manipulates the buffer.

#### Parameters

|                  |                            |
|------------------|----------------------------|
| <code>__s</code> | Pointer to a buffer area.  |
| <code>__n</code> | Size of <code>__s</code> . |

#### Returns

`this`

If no file has been opened, and both `__s` and `__n` are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.-html> for more.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 686 of file `fstream.tcc`.

4.67.3.32 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::setg ( char_type * __gbeg, char_type * __gnext, char_type * __gend ) [inline], [protected], [inherited]`

Setting the three read area pointers.

## Parameters

|                      |            |
|----------------------|------------|
| <code>__gbeg</code>  | A pointer. |
| <code>__gnext</code> | A pointer. |
| <code>__gend</code>  | A pointer. |

## Postcondition

`__gbeg == eback()`, `__gnext == gp_ptr()`, and `__gend == eg_ptr()`

Definition at line 509 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, and `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

4.67.3.33 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::setp( char_type * __pbeg, char_type * __pend )` `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

## Parameters

|                     |            |
|---------------------|------------|
| <code>__pbeg</code> | A pointer. |
| <code>__pend</code> | A pointer. |

## Postcondition

`__pbeg == pbase()`, `__pbeg == pp_ptr()`, and `__pend == ep_ptr()`

Definition at line 555 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

4.67.3.34 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sgetc( )` `[inline]`, `[inherited]`

Getting the next character.

## Returns

The next character, or `eof`.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 338 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_streambuf<char, char_traits<char>>::snextc()`.

4.67.3.35 `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sgetn( char_type * __s, streamsize __n )` `[inline]`, `[inherited]`

Entry point for `xsgetn`.

## Parameters

|                  |                |
|------------------|----------------|
| <code>__s</code> | A buffer area. |
| <code>__n</code> | A count.       |

Returns `xsgetn(__s,__n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

Definition at line 357 of file `streambuf`.

4.67.3.36 `template<typename _CharT, typename _Traits> streamsize std::basic_filebuf<_CharT, _Traits>::showmanyc ( )`  
`[protected], [virtual], [inherited]`

Investigating the data available.

## Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

## Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 178 of file `fstream.tcc`.

References `std::ios_base::binary`, and `std::ios_base::in`.

4.67.3.37 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::snextc ( )` `[inline], [inherited]`

Getting the next character.

## Returns

The next character, or eof.

Calls `sputc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 298 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

4.67.3.38 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sputbackc ( char_type __c )` `[inline], [inherited]`

Pushing characters back into the input stream.

## Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__c</code> | The character to push back. |
|------------------|-----------------------------|

## Returns

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 372 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

**4.67.3.39** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sputc ( char_type __c ) [inline], [inherited]`

Entry point for all single-character output functions.

## Parameters

|                  |                        |
|------------------|------------------------|
| <code>__c</code> | A character to output. |
|------------------|------------------------|

## Returns

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(-__c)`.

Definition at line 424 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, and `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

**4.67.3.40** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sputn ( const char_type *__s, streamsize __n ) [inline], [inherited]`

Entry point for all single-character output functions.

## Parameters

|                  |                     |
|------------------|---------------------|
| <code>__s</code> | A buffer read area. |
| <code>__n</code> | A count.            |

One of two public output functions.

Returns `xspn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 450 of file `streambuf`.

**4.67.3.41** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sungetc ( ) [inline], [inherited]`

Moving backwards in the input stream.

**Returns**

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 397 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::unget()`.

**4.67.3.42** `template<typename _CharT, typename _Traits> int std::basic_filebuf<_CharT, _Traits>::sync ( )`  
`[protected], [virtual], [inherited]`

Synchronizes the buffer arrays with the controlled sequences.

**Returns**

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note**

Base class version does nothing, returns zero.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 895 of file `fstream.tcc`.

**4.67.3.43** `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual int_type std::basic_streambuf<`  
`_CharT, _Traits>::uflow ( ) [inline], [protected], [virtual], [inherited]`

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 700 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::sbumpc()`.

**4.67.3.44** `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::int_type std::basic_filebuf<`  
`_CharT, _Traits>::underflow ( ) [protected], [virtual], [inherited]`

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

#### Note

Base class version does nothing, returns eof().

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 204 of file `fstream.tcc`.

References `std::ios_base::in`, and `std::min()`.

**4.67.3.45** `template<typename _CharT, typename _Traits> streamsize std::basic_filebuf<_CharT, _Traits>::xsgetn ( char_type* __s, streamsize __n )` `[protected]`, `[virtual]`, `[inherited]`

Multiple character extraction.

#### Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | A buffer area.                          |
| <code>__n</code> | Maximum number of characters to assign. |

#### Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 550 of file `fstream.tcc`.

References `std::ios_base::in`.

**4.67.3.46** `template<typename _CharT, typename _Traits> streamsize std::basic_filebuf<_CharT, _Traits>::xspn ( const char_type* __s, streamsize __n )` `[protected]`, `[virtual]`, `[inherited]`

Multiple character insertion.

#### Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A buffer area.                         |
| <code>__n</code> | Maximum number of characters to write. |

#### Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 638 of file `fstream.tcc`.

References `std::ios_base::app`, `std::min()`, and `std::ios_base::out`.

#### 4.67.4 Member Data Documentation

**4.67.4.1** `template<typename _CharT, typename _Traits> char_type* std::basic_filebuf< _CharT, _Traits >::_M_buf`  
`[protected], [inherited]`

Pointer to the beginning of internal buffer.

Definition at line 114 of file `fstream`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**4.67.4.2** `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale`  
`[protected], [inherited]`

Current locale setting.

Definition at line 192 of file `streambuf`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::basic_filebuf()`, `std::basic_streambuf< char, char_traits< char > >::getloc()`, and `std::basic_streambuf< char, char_traits< char > >::pubimbue()`.

**4.67.4.3** `template<typename _CharT, typename _Traits> size_t std::basic_filebuf< _CharT, _Traits >::_M_buf_size`  
`[protected], [inherited]`

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 121 of file `fstream`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**4.67.4.4** `template<typename _CharT, typename _Traits> char* std::basic_filebuf< _CharT, _Traits >::_M_ext_buf`  
`[protected], [inherited]`

Buffer for external characters. Used for input when `codecvt::always_noconv() == false`. When valid, this corresponds to `eback()`.

Definition at line 156 of file `fstream`.

**4.67.4.5** `template<typename _CharT, typename _Traits> streamsize std::basic_filebuf< _CharT, _Traits >::_M_ext_buf_size`  
`[protected], [inherited]`

Size of buffer held by `_M_ext_buf`.

Definition at line 161 of file `fstream`.

**4.67.4.6** `template<typename _CharT, typename _Traits> const char* std::basic_filebuf< _CharT, _Traits >::_M_ext_next`  
`[protected], [inherited]`

Pointers into the buffer held by `_M_ext_buf` that delimit a subsequence of bytes that have been read but not yet converted. When valid, `_M_ext_next` corresponds to `egptr()`.

Definition at line 168 of file `fstream`.

**4.67.4.7** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg`  
`[protected], [inherited]`

Start of get area.

Definition at line 184 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::eback()`, and `std::basic_streambuf<char, char_traits<char>>::setg()`.

**4.67.4.8** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_cur` `[protected]`, `[inherited]`

Current read area.

Definition at line 185 of file `streambuf`.

#### 4.68.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>> class __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>
```

Provides a layer of compatibility for C.

This GNU extension provides extensions for working with standard C FILE\*'s. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.

Definition at line 56 of file `stdio_sync_filebuf.h`.

#### 4.68.2 Member Typedef Documentation

```
4.68.2.1 template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef basic_streambuf<char_type, traits_type> std::basic_streambuf<_CharT, _Traits>::__streambuf_type [inherited]
```

This is a non-standard type.

Definition at line 138 of file `streambuf`.

### 4.68.3 Member Function Documentation

**4.68.3.1** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::eback( ) const` `[inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 482 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_streambuf< char, char_traits< char > >::sputbackc()`, and `std::basic_streambuf< char, char_traits< char > >::sungetc()`.

**4.68.3.2** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::egptr( ) const` `[inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 488 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_streambuf< char, char_traits< char > >::in_avail()`, `std::basic_streambuf< char, char_traits< char > >::sbumpc()`, `std::basic_streambuf< char, char_traits< char > >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::str()`.

**4.68.3.3** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::epptr( ) const` `[inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 535 of file `streambuf`.

Referenced by `std::basic_streambuf< char, char_traits< char > >::putc()`.

4.68.3.4 `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> std::__c_file* const  
__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::file ( ) [inline]`

Returns

The underlying FILE\*.

This function can be used to access the underlying C file pointer. Note that there is no way for the library to track what you do with the file, so be careful.

Definition at line 88 of file `stdio_sync_filebuf.h`.

4.68.3.5 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::gbump ( int __n ) [inline], [protected], [inherited]`

Moving the read position.

Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the read position without returning any data.

Definition at line 498 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::sbumpc()`, `std::basic_streambuf<char, char_traits<char>>::sputbackc()`, `std::basic_streambuf<char, char_traits<char>>::sungetc()`, and `std::basic_streambuf<char, char_traits<char>>::uflow()`.

4.68.3.6 `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::getloc ( ) const [inline], [inherited]`

Locale access.

Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 226 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::pubimbue()`.

4.68.3.7 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::gptr ( ) const [inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 485 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, `std::basic_streambuf<char, char_traits<char>>::in_avail()`, `std::basic_streambuf<`

`char`, `char_traits< char > >::sbumpc()`, `std::basic_streambuf< char, char_traits< char > >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_streambuf< char, char_traits< char > >::sputbackc()`, `std::basic_streambuf< char, char_traits< char > >::sungetc()`, and `std::basic_streambuf< char, char_traits< char > >::uflow()`.

**4.68.3.8** `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual void std::basic_streambuf<_CharT, _Traits>::imbue ( const locale & __loc ) [inline], [protected], [virtual], [inherited]`

Changes translations.

Parameters

|                    |               |
|--------------------|---------------|
| <code>__loc</code> | A new locale. |
|--------------------|---------------|

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

Definition at line 576 of file streambuf.

Referenced by `std::basic_streambuf< char, char_traits< char > >::pubimbue()`.

**4.68.3.9** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::in_avail ( ) [inline], [inherited]`

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 284 of file streambuf.

**4.68.3.10** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> virtual int_type __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::overflow ( int_type __c = traits_type::eof() ) [inline], [protected], [virtual]`

Consumes data from the buffer; writes to the controlled sequence.

Parameters

|                  |                                     |
|------------------|-------------------------------------|
| <code>__c</code> | An additional character to consume. |
|------------------|-------------------------------------|

Returns

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

#### Note

Base class version does nothing, returns eof().

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 141 of file `stdio_sync_filebuf.h`.

```
4.68.3.11 template<typename _CharT, typename _Traits = std::char_traits<_CharT>> virtual int_type
 __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::pbackfail(int_type __c = traits_type::eof())
 [inline], [protected], [virtual]
```

Tries to back up the input sequence.

#### Parameters

|                  |                                                      |
|------------------|------------------------------------------------------|
| <code>__c</code> | The character to be inserted back into the sequence. |
|------------------|------------------------------------------------------|

#### Returns

eof() on failure, *some other value* on success

#### Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

#### Note

Base class version does nothing, returns eof().

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 116 of file `stdio_sync_filebuf.h`.

```
4.68.3.12 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<
 _CharT, _Traits>::pbase() const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 529 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

```
4.68.3.13 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>
 >::pbump(int __n) [inline], [protected], [inherited]
```

Moving the write position.

## Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the write position without returning any data.

Definition at line 545 of file streambuf.

Referenced by `std::basic_streambuf< char, char_traits< char > >::sputc()`.

4.68.3.14 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::pptr ( ) const [inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 532 of file streambuf.

Referenced by `std::basic_streambuf< char, char_traits< char > >::sputc()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::str()`.

4.68.3.15 `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf< _CharT, _Traits>::pubimbue ( const locale & __loc ) [inline], [inherited]`

Entry point for `imbue()`.

## Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

## Returns

The previous locale.

Calls the derived `imbue(__loc)`.

Definition at line 209 of file streambuf.

4.68.3.16 `template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<_CharT, _Traits>::pubseekoff ( off_type __off, ios_base::seekdir __way, ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]`

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__off</code>  | Offset.                                     |
| <code>__way</code>  | Value for <code>ios_base::seekdir</code> .  |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual `seekoff` function.

Definition at line 251 of file streambuf.

```
4.68.3.17 template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<_CharT,
 _Traits>::pubseekpos (pos_type __sp, ios_base::openmode __mode = ios_base::in | ios_base::out)
 [inline], [inherited]
```

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__sp</code>   | Position                                    |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual `seekpos` function.

Definition at line 263 of file `streambuf`.

```
4.68.3.18 template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_streambuf*
 std::basic_streambuf<_CharT, _Traits>::pubsetbuf(char_type* __s, streamsize __n) [inline],
 [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 239 of file `streambuf`.

```
4.68.3.19 template<typename _CharT, typename _Traits = char_traits<_CharT>> int std::basic_streambuf<_CharT, _Traits>::pubsync() [inline], [inherited]
```

Calls virtual `sync` function.

Definition at line 271 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::sync()`.

```
4.68.3.20 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sbumpc() [inline], [inherited]
```

Getting the next character.

## Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 316 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, and `std::basic_streambuf<char, char_traits<char>>::snextc()`.

```
4.68.3.21 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual pos_type std::basic_streambuf<_CharT, _Traits>::seekoff(off_type, ios_base::seekdir, ios_base::openmode = ios_base::in | ios_base::out) [inline], [protected], [virtual], [inherited]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

## Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>`.

Definition at line 602 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::pubseekoff()`.

4.68.3.22 `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual pos_type std::basic_streambuf<_CharT, _Traits>::seekpos ( pos_type , ios_base::openmode = ios_base::in | ios_base::out )`  
`[inline], [protected], [virtual], [inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>`.

Definition at line 614 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::pubseekpos()`.

4.68.3.23 `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual basic_streambuf<char_type, _Traits>*> std::basic_streambuf<_CharT, _Traits>::setbuf ( char_type *, streamsize )`  
`[inline], [protected], [virtual], [inherited]`

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html> for more on this function.

#### Note

Base class version does nothing, returns `this`.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>`.

Definition at line 591 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::pubsetbuf()`.

4.68.3.24 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::setg ( char_type * __gbeg, char_type * __gnext, char_type * __gend )`  
`[inline], [protected], [inherited]`

Setting the three read area pointers.

#### Parameters

|                      |            |
|----------------------|------------|
| <code>__gbeg</code>  | A pointer. |
| <code>__gnext</code> | A pointer. |
| <code>__gend</code>  | A pointer. |

#### Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Definition at line 509 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**4.68.3.25** `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf< _CharT, _Traits >::setp( char_type * __pbeg, char_type * __pend )` `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

#### Parameters

|                     |            |
|---------------------|------------|
| <code>__pbeg</code> | A pointer. |
| <code>__pend</code> | A pointer. |

#### Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Definition at line 555 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`.

**4.68.3.26** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sgetc ( )` `[inline]`, `[inherited]`

Getting the next character.

#### Returns

The next character, or `eof`.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 338 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_streambuf< char, char_traits< char > >::snextc()`.

**4.68.3.27** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf< _CharT, _Traits >::sgetn( char_type * __s, streamsize __n )` `[inline]`, `[inherited]`

Entry point for `xsgetn`.

#### Parameters

|                  |                |
|------------------|----------------|
| <code>__s</code> | A buffer area. |
| <code>__n</code> | A count.       |

Returns `xsgetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

Definition at line 357 of file `streambuf`.

**4.68.3.28** `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual streamsize std::basic_streambuf< _CharT, _Traits >::showmanyc ( )` `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Investigating the data available.

**Returns**

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

**Note**

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>`.

Definition at line 649 of file `streambuf`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::in_avail()`.

**4.68.3.29** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::snextc ( )` `[inline]`, `[inherited]`

Getting the next character.

**Returns**

The next character, or `eof`.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 298 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**4.68.3.30** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sputbackc ( char_type __c )` `[inline]`, `[inherited]`

Pushing characters back into the input stream.

**Parameters**

|                  |                             |
|------------------|-----------------------------|
| <code>__c</code> | The character to push back. |
|------------------|-----------------------------|

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 372 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

**4.68.3.31** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sputc ( char_type __c )` `[inline]`, `[inherited]`

Entry point for all single-character output functions.

## Parameters

|                  |                        |
|------------------|------------------------|
| <code>__c</code> | A character to output. |
|------------------|------------------------|

## Returns

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(-__c)`.

Definition at line 424 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, and `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

4.68.3.32 `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sputn( const char_type* __s, streamsize __n ) [inline], [inherited]`

Entry point for all single-character output functions.

## Parameters

|                  |                     |
|------------------|---------------------|
| <code>__s</code> | A buffer read area. |
| <code>__n</code> | A count.            |

One of two public output functions.

Returns `xspn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 450 of file `streambuf`.

4.68.3.33 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sungetc( ) [inline], [inherited]`

Moving backwards in the input stream.

## Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 397 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::unget()`.

4.68.3.34 `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> virtual int __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::sync( void ) [inline], [protected], [virtual]`

Synchronizes the buffer arrays with the controlled sequences.

## Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note**

Base class version does nothing, returns zero.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 160 of file `stdio_sync_filebuf.h`.

```
4.68.335 template<typename _CharT, typename _Traits = std::char_traits<_CharT>> virtual int_type
 __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::uflow() [inline], [protected], [virtual]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 108 of file `stdio_sync_filebuf.h`.

```
4.68.336 template<typename _CharT, typename _Traits = std::char_traits<_CharT>> virtual int_type
 __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::underflow() [inline], [protected],
 [virtual]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html>

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 101 of file `stdio_sync_filebuf.h`.

```
4.68.337 template<typename _CharT, typename _Traits> streamsize std::basic_streambuf<_CharT, _Traits>::xsgetn (
 char_type * __s, streamsize __n) [protected], [virtual], [inherited]
```

Multiple character extraction.

**Parameters**

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | A buffer area.                          |
| <code>__n</code> | Maximum number of characters to assign. |

**Returns**

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 46 of file `streambuf.tcc`.

References `std::min()`.

Referenced by `std::basic_streambuf<char, char_traits<char>>::sgetn()`.

**4.68.3.38** `template<typename _CharT, typename _Traits> streamsize std::basic_streambuf<_CharT, _Traits>::xsputn (const char_type * __s, streamsize __n) [protected], [virtual], [inherited]`

Multiple character insertion.

**Parameters**

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A buffer area.                         |
| <code>__n</code> | Maximum number of characters to write. |

**Returns**

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 80 of file `streambuf.tcc`.

References `std::min()`.

#### 4.69 `__gnu_cxx::subtractive_rng` Class Reference

Inheritance diagram for `__gnu_cxx::subtractive_rng`:

##### Public Types

- typedef `_Arg` [argument\\_type](#)
- typedef `_Result` [result\\_type](#)

##### Public Member Functions

- [subtractive\\_rng](#) (unsigned int `__seed`)
- [subtractive\\_rng](#) ()
- void **`_M_initialize`** (unsigned int `__seed`)
- unsigned int [operator\(\)](#) (unsigned int `__limit`)

##### 4.69.1 Detailed Description

The `subtractive_rng` class is documented on [SGI's site](#). Note that this code assumes that `int` is 32 bits. Definition at line 352 of file `ext/functional`.

##### 4.69.2 Member Typedef Documentation

**4.69.2.1** `template<typename _Arg, typename _Result> typedef _Arg std::unary_function< _Arg, _Result >::argument_type`  
[inherited]

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

**4.69.2.2** `template<typename _Arg, typename _Result> typedef _Result std::unary_function< _Arg, _Result >::result_type`  
[inherited]

`result_type` is the return type

Definition at line 111 of file `stl_function.h`.

## 4.69.3 Constructor &amp; Destructor Documentation

4.69.3.1 `__gnu_cxx::subtractive_rng::subtractive_rng ( unsigned int __seed ) [inline]`

Ctor allowing you to initialize the seed.

Definition at line 394 of file `ext/functional`.

4.69.3.2 `__gnu_cxx::subtractive_rng::subtractive_rng ( ) [inline]`

Default ctor; initializes its state with some number you don't see.

Definition at line 398 of file `ext/functional`.

## 4.69.4 Member Function Documentation

4.69.4.1 `unsigned int __gnu_cxx::subtractive_rng::operator()( unsigned int __limit ) [inline]`

Returns a number less than the argument.

Definition at line 363 of file `ext/functional`.

The documentation for this class was generated from the following file:

- [ext/functional](#)

4.70 `__gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>` Struct Template Reference

Inheritance diagram for `__gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>`:

## Public Types

- typedef pointer **iterator**
- typedef value\_type \* **pointer**
- typedef ptrdiff\_t **size\_type**
- typedef \_Tp **value\_type**

### Public Member Functions

- `temporary_buffer` (`_ForwardIterator __first, _ForwardIterator __last`)
- `~temporary_buffer` ()
- iterator `begin` ()
- iterator `end` ()
- `size_type requested_size` () const
- `size_type size` () const

### Protected Attributes

- pointer `_M_buffer`
- `size_type _M_len`
- `size_type _M_original_len`

#### 4.70.1 Detailed Description

```
template<class _ForwardIterator, class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type> struct __gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>
```

This class provides similar behavior and semantics of the standard functions `get_temporary_buffer()` and `return_temporary_buffer()`, but encapsulated in a type vaguely resembling a standard container.

By default, a `temporary_buffer<Iter>` stores space for objects of whatever type the `Iter` iterator points to. It is constructed from a typical `[first,last)` range, and provides the `begin()`, `end()`, `size()` functions, as well as `requested_size()`. For non-trivial types, copies of `*first` will be used to initialize the storage.

`malloc` is used to obtain underlying storage.

Like `get_temporary_buffer()`, not all the requested memory may be available. Ideally, the created buffer will be large enough to hold a copy of `[first,last)`, but if `size()` is less than `requested_size()`, then this didn't happen.

Definition at line 183 of file `ext/memory`.

#### 4.70.2 Constructor & Destructor Documentation

```
4.70.2.1 template<class _ForwardIterator, class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type>
 __gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>::temporary_buffer (_ForwardIterator __first,
 _ForwardIterator __last) [inline]
```

Requests storage large enough to hold a copy of `[first,last)`.

Definition at line 186 of file `ext/memory`.

```
4.70.2.2 template<class _ForwardIterator, class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type>
 __gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>::~temporary_buffer () [inline]
```

Destroys objects and frees storage.

Definition at line 190 of file `ext/memory`.

#### 4.70.3 Member Function Documentation

4.70.3.1 `template<typename _ForwardIterator, typename _Tp> iterator std::_Temporary_buffer<_ForwardIterator, _Tp>::begin( ) [inline], [inherited]`

As per Table mumble.

Definition at line 151 of file `stl_tempbuf.h`.

4.70.3.2 `template<typename _ForwardIterator, typename _Tp> iterator std::_Temporary_buffer<_ForwardIterator, _Tp>::end( ) [inline], [inherited]`

As per Table mumble.

Definition at line 156 of file `stl_tempbuf.h`.

4.70.3.3 `template<typename _ForwardIterator, typename _Tp> size_type std::_Temporary_buffer<_ForwardIterator, _Tp>::requested_size( ) const [inline], [inherited]`

Returns the size requested by the constructor; may be `>size()`.

Definition at line 146 of file `stl_tempbuf.h`.

4.70.3.4 `template<typename _ForwardIterator, typename _Tp> size_type std::_Temporary_buffer<_ForwardIterator, _Tp>::size( ) const [inline], [inherited]`

As per Table mumble.

Definition at line 141 of file `stl_tempbuf.h`.

The documentation for this struct was generated from the following file:

## 4.82.1 Detailed Description

```
template<typename _Iterator, typename _Sequence> class __gnu_debug::_Safe_iterator<_Iterator, _Sequence>
```

Safe iterator wrapper.

The class template `_Safe_iterator` is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In addition to the basic iterator operations (which are validated, and then passed to the underlying iterator), `_Safe_iterator` has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

Definition at line 46 of file `formatter.h`.

## 4.82.2 Constructor &amp; Destructor Documentation

```
4.82.2.1 template<typename _Iterator, typename _Sequence> __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_Safe_iterator() [inline], [noexcept]
```

## Postcondition

the iterator is singular and unattached

Definition at line 138 of file `safe_iterator.h`.

```
4.82.2.2 template<typename _Iterator, typename _Sequence> __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_Safe_iterator(const _Iterator & __i, const _Sequence * __seq) [inline], [noexcept]
```

Safe iterator construction from an unsafe iterator and its sequence.

## Precondition

`seq` is not NULL

## Postcondition

this is not singular

Definition at line 147 of file `safe_iterator.h`.

References `__gnu_debug::_Safe_iterator_base::_M_singular()`.

```
4.82.2.3 template<typename _Iterator, typename _Sequence> __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_Safe_iterator(const _Safe_iterator<_Iterator, _Sequence> & __x) [inline], [noexcept]
```

Copy construction.

Definition at line 159 of file `safe_iterator.h`.

```
4.82.2.4 template<typename _Iterator, typename _Sequence> __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_Safe_iterator(_Safe_iterator<_Iterator, _Sequence> && __x) [inline], [noexcept]
```

Move construction.

## Postcondition

`__x` is singular and unattached

Definition at line 176 of file `safe_iterator.h`.

References `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_attach()`.

```
4.82.2.5 template<typename _Iterator, typename _Sequence> template<typename _MutableIterator >
 __gnu_debug::__Safe_iterator< _Iterator, _Sequence >::__Safe_iterator (const __Safe_iterator<
 _MutableIterator, typename __gnu_cxx::__enable_if<(std::__are_same< _MutableIterator, typename
 _Sequence::iterator::iterator_type >::__value), _Sequence >::__type > &__x) [inline], [noexcept]
```

Converting constructor from a mutable iterator to a constant iterator.

Definition at line 194 of file `safe_iterator.h`.

#### 4.82.3 Member Function Documentation

```
4.82.3.1 void __gnu_debug::__Safe_iterator_base::__M_attach (_Safe_sequence_base * __seq, bool __constant)
 [inherited]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by `__gnu_debug::__Safe_local_iterator< _Iterator, _Sequence >::__M_attach()`, `__gnu_debug::__Safe_iterator< _Iterator, _Sequence >::__M_attach()`, and `__gnu_debug::__Safe_iterator_base::__Safe_iterator_base()`.

```
4.82.3.2 template<typename _Iterator, typename _Sequence> void __gnu_debug::__Safe_iterator< _Iterator, _Sequence
 >::__M_attach (_Safe_sequence_base * __seq) [inline]
```

Attach iterator to the given sequence.

Definition at line 402 of file `safe_iterator.h`.

References `__gnu_debug::__Safe_iterator_base::__M_attach()`.

Referenced by `__gnu_debug::__Safe_iterator< _Iterator, _Sequence >::__Safe_iterator()`, and `__gnu_debug::__Safe_iterator< _Iterator, _Sequence >::operator=()`.

```
4.82.3.3 void __gnu_debug::__Safe_iterator_base::__M_attach_single (_Safe_sequence_base * __seq, bool __constant) throw()
 [inherited]
```

Likewise, but not thread-safe.

Referenced by `__gnu_debug::__Safe_local_iterator< _Iterator, _Sequence >::__M_attach_single()`, and `__gnu_debug::__Safe_iterator< _Iterator, _Sequence >::__M_attach_single()`.

```
4.82.3.4 template<typename _Iterator, typename _Sequence> void __gnu_debug::__Safe_iterator< _Iterator, _Sequence
 >::__M_attach_single (_Safe_sequence_base * __seq) [inline]
```

Likewise, but not thread-safe.

Definition at line 409 of file `safe_iterator.h`.

References `__gnu_debug::__Safe_iterator_base::__M_attach_single()`.

```
4.82.3.5 bool __gnu_debug::__Safe_iterator_base::__M_attached_to (const _Safe_sequence_base * __seq) const
 [inline], [inherited]
```

Determines if we are attached to the given sequence.

Definition at line 129 of file `safe_base.h`.

References `__gnu_debug::__Safe_iterator_base::__M_sequence`.

4.82.3.6 `template<typename _Iterator, typename _Sequence> bool __gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_before_dereferenceable ( ) const [inline]`

Is the iterator before a dereferenceable one?

Definition at line 421 of file `safe_iterator.h`.

References `__gnu_debug::__base()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_incrementable()`, and `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::base()`.

4.82.3.7 `bool __gnu_debug::Safe_iterator_base::M_can_compare ( const _Safe_iterator_base & __x ) const throw () [inherited]`

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

4.82.3.8 `template<typename _Iterator, typename _Sequence> bool __gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_dereferenceable ( ) const [inline]`

Is the iterator dereferenceable?

Definition at line 416 of file `safe_iterator.h`.

References `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_is_before_begin()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_is_end()`, and `__gnu_debug::Safe_iterator_base::M_singular()`.

Referenced by `__gnu_debug::check_dereferenceable()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::operator*()`, and `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::operator->()`.

4.82.3.9 `void __gnu_debug::Safe_iterator_base::M_detach ( ) [inherited]`

Detach the iterator for whatever sequence it is attached to, if any.

4.82.3.10 `void __gnu_debug::Safe_iterator_base::M_detach_single ( ) throw () [inherited]`

Likewise, but not thread-safe.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

4.82.3.11 `__gnu_cxx::mutex& __gnu_debug::Safe_iterator_base::M_get_mutex ( ) throw () [protected], [inherited]`

For use in `_Safe_iterator`.

4.82.3.12 `template<typename _Iterator, typename _Sequence> bool __gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_incrementable ( ) const [inline]`

Is the iterator incrementable?

Definition at line 433 of file `safe_iterator.h`.

References `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_is_end()`, and `__gnu_debug::Safe_iterator_base::M_singular()`.

Referenced by `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_before_dereferenceable()`, and `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::operator++()`.

4.82.3.13 `void __gnu_debug::Safe_iterator_base::M_invalidate ( ) [inline], [inherited]`

Invalidate the iterator, making it singular.

Definition at line 142 of file `safe_base.h`.

References `__gnu_debug::_Safe_iterator_base::_M_version`.

**4.82.3.14** `template<typename _Iterator, typename _Sequence> bool __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_is_before_begin ( ) const [inline]`

Is this iterator equal to the sequence's `before_begin()` iterator if any?

Definition at line 470 of file `safe_iterator.h`.

Referenced by `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_dereferenceable()`.

**4.82.3.15** `template<typename _Iterator, typename _Sequence> bool __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_is_begin ( ) const [inline]`

Is this iterator equal to the sequence's `begin()` iterator?

Definition at line 459 of file `safe_iterator.h`.

References `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::base()`.

**4.82.3.16** `template<typename _Iterator, typename _Sequence> bool __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_is_beginnest ( ) const [inline]`

Is this iterator equal to the sequence's `before_begin()` iterator if any or `begin()` otherwise?

Definition at line 476 of file `safe_iterator.h`.

**4.82.3.17** `template<typename _Iterator, typename _Sequence> bool __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_is_end ( ) const [inline]`

Is this iterator equal to the sequence's `end()` iterator?

Definition at line 464 of file `safe_iterator.h`.

References `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::base()`.

Referenced by `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_dereferenceable()`, and `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_incrementable()`.

**4.82.3.18** `void __gnu_debug::_Safe_iterator_base::_M_reset ( ) throw [inherited]`

Reset all member variables

**4.82.3.19** `bool __gnu_debug::_Safe_iterator_base::_M_singular ( ) const throw [inherited]`

Is this iterator singular?

Referenced by `__gnu_debug::_check_singular_aux()`, `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_dereferenceable()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_dereferenceable()`, `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_incrementable()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_M_incrementable()`, `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::_Safe_iterator()`, and `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_Safe_local_iterator()`.

**4.82.3.20** `void __gnu_debug::_Safe_iterator_base::_M_unlink ( ) throw [inline],[inherited]`

Unlink itself

Definition at line 151 of file `safe_base.h`.

References `__gnu_debug::_Safe_iterator_base::_M_next`, and `__gnu_debug::_Safe_iterator_base::_M_prior`.

4.82.3.21 `template<typename _Iterator, typename _Sequence> _Iterator __gnu_debug::Safe_iterator<_Iterator, _Sequence>::base( ) const [inline], [noexcept]`

Return the underlying iterator.

Definition at line 392 of file `safe_iterator.h`.

**4.82.4 Member Data Documentation**

4.82.4.1 `_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::M_next [inherited]`

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 72 of file safe\_base.h.

Referenced by \_\_gnu\_debug::\_Safe\_sequence< \_Sequence >::\_M\_transfer\_from\_if(), and \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_unlink().

#### 4.82.4.2 \_Safe\_iterator\_base\* \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_prior [inherited]

Pointer to the previous iterator in the sequence's list of iterators. Only valid when \_M\_sequence != NULL.

Definition at line 68 of file safe\_base.h.

Referenced by \_\_gnu\_debug::\_Safe\_sequence< \_Sequence >::\_M\_transfer\_from\_if(), and \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_unlink().

#### 4.82.4.3 \_Safe\_sequence\_base\* \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_sequence [inherited]

The sequence this iterator references; may be NULL to indicate a singular iterator.

Definition at line 55 of file safe\_base.h.

Referenced by \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_attached\_to(), \_\_gnu\_debug::\_Safe\_sequence< \_Sequence >::\_M\_transfer\_from\_if(), \_\_gnu\_debug::\_Safe\_iterator\_base::\_Safe\_iterator\_base(), and \_\_gnu\_debug::\_Safe\_local\_iterator\_base::\_Safe\_local\_iterator\_base().

#### 4.82.4.4 unsigned int \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_version [inherited]

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by \_M\_sequence for the iterator to be non-singular.

Definition at line 64 of file safe\_base.h.

Referenced by \_\_gnu\_debug::\_Safe\_iterator\_base::\_M\_invalidate().

- `_Safe_iterator_base & operator=` (`const _Safe_iterator_base &`)

#### 4.83.1 Detailed Description

Basic functionality for a *safe* iterator.

The `_Safe_iterator_base` base class implements the functionality of a safe iterator that is not specific to a particular iterator type. It contains a pointer back to the sequence it references along with iterator version information and pointers to form a doubly-linked list of iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

Definition at line 50 of file `safe_base.h`.

#### 4.83.2 Constructor & Destructor Documentation

##### 4.83.2.1 `__gnu_debug::_Safe_iterator_base::_Safe_iterator_base ( )` `[inline]`, `[protected]`

Initializes the iterator and makes it singular.

Definition at line 76 of file `safe_base.h`.

**4.83.2.2** `__gnu_debug::Safe_iterator_base::Safe_iterator_base ( const _Safe_sequence_base * __seq, bool __constant )`  
`[inline], [protected]`

Initialize the iterator to reference the sequence pointed to by `__seq`. `__constant` is true when we are initializing a constant iterator, and false if it is a mutable iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

Definition at line 87 of file `safe_base.h`.

References `_M_attach()`.

**4.83.2.3** `__gnu_debug::Safe_iterator_base::Safe_iterator_base ( const _Safe_iterator_base & __x, bool __constant )`  
`[inline], [protected]`

Initializes the iterator to reference the same sequence that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

Definition at line 94 of file `safe_base.h`.

References `_M_attach()`, and `_M_sequence`.

### 4.83.3 Member Function Documentation

**4.83.3.1** `void __gnu_debug::Safe_iterator_base::M_attach ( _Safe_sequence_base * __seq, bool __constant )`

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::M_attach()`, `__gnu_debug::Safe_iterator< _Iterator, _Sequence >::M_attach()`, and `_Safe_iterator_base()`.

**4.83.3.2** `void __gnu_debug::Safe_iterator_base::M_attach_single ( _Safe_sequence_base * __seq, bool __constant ) throw`

Likewise, but not thread-safe.

Referenced by `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::M_attach_single()`, and `__gnu_debug::Safe_iterator< _Iterator, _Sequence >::M_attach_single()`.

**4.83.3.3** `bool __gnu_debug::Safe_iterator_base::M_attached_to ( const _Safe_sequence_base * __seq ) const`  
`[inline]`

Determines if we are attached to the given sequence.

Definition at line 129 of file `safe_base.h`.

References `_M_sequence`.

**4.83.3.4** `bool __gnu_debug::Safe_iterator_base::M_can_compare ( const _Safe_iterator_base & __x ) const throw`

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

**4.83.3.5** `void __gnu_debug::Safe_iterator_base::M_detach ( )`

Detach the iterator for whatever sequence it is attached to, if any.

**4.83.3.6** `void __gnu_debug::Safe_iterator_base::M_detach_single ( ) throw`

Likewise, but not thread-safe.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

**4.83.3.7** `__gnu_cxx::mutex& __gnu_debug::Safe_iterator_base::M_get_mutex ( ) throw` `[protected]`

For use in `_Safe_iterator`.

**4.83.3.8** `void __gnu_debug::Safe_iterator_base::M_invalidate ( )` `[inline]`

Invalidate the iterator, making it singular.

Definition at line 142 of file `safe_base.h`.

References `_M_version`.

**4.83.3.9** `void __gnu_debug::Safe_iterator_base::M_reset ( ) throw`

Reset all member variables

**4.83.3.10** `bool __gnu_debug::Safe_iterator_base::M_singular ( ) const throw`

Is this iterator singular?

Referenced by `__gnu_debug::check_singular_aux()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::M_dereferenceable()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_dereferenceable()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::M_incrementable()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_incrementable()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::Safe_iterator()`, and `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::Safe_local_iterator()`.

**4.83.3.11** `void __gnu_debug::Safe_iterator_base::M_unlink ( ) throw` `[inline]`

Unlink itself

Definition at line 151 of file `safe_base.h`.

References `_M_next`, and `_M_prior`.

#### 4.83.4 Member Data Documentation

**4.83.4.1** `_Safe_iterator_base* __gnu_debug::Safe_iterator_base::M_next`

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 72 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`, and `_M_unlink()`.

**4.83.4.2** `_Safe_iterator_base* __gnu_debug::Safe_iterator_base::M_prior`

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 68 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`, and `_M_unlink()`.

**4.83.4.3** `_Safe_sequence_base* __gnu_debug::Safe_iterator_base::M_sequence`

The sequence this iterator references; may be `NULL` to indicate a singular iterator.

Definition at line 55 of file `safe_base.h`.

Referenced by `_M_attached_to()`, `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`, `_Safe_`

iterator\_base(), and \_\_gnu\_debug::\_\_Safe\_local\_iterator\_base::\_\_Safe\_local\_iterator\_base().

#### 4.83.4.4 unsigned int \_\_gnu\_debug::\_\_Safe\_iterator\_base::\_M\_version

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by \_M\_sequence for the iterator to be non-singular.

Definition at line 64 of file safe\_base.h.

Referenced by \_M\_invalidate().
